LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 17.—The market has been rather quiet this week, still as consumption is going on undiminished, this is not likely to prevail long. Prices are without change.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 17.—The grain markets are quiet, with a small attendance of buyers. Wheat dull of sale, at Thursday's prices. Flour inactive. Indian corn obtainable at rather lower prices. Ibrail, 33s to 36s; Galatz and Odessa, 33s 9d to 34s; Egyptian, 34s; French, 35s. Egyptian beans, 34s 6d. Oatmeal and barley a shade easier, and not much business.

The Gazette.

BANKRUPTS.

TUESDAY, Feb. 14.

E. S. West, Bingham place, New North road, Hoxton, boardinghouse keeper.
T. Streeter, Portsmouth, hotel keeper.

SCOTCH BANKRUPTS.

I. F. Coyle, Glasgow, formerly of Grove end road, St John's wood, London.
J. Kincaid, cabinet maker, Hamilton.
W. F. Booth, spirit dealer, Greenock.

DRURY LANE THEATRE.—On Monday night a new drama from the pen of Mr H. Hall was put upon the boards of this theatre with decided success. It is called "The Forest Keeper."

ST. JAMES'S THEATRE.—One of those slight pieces which depend more upon smartness of dialogue than interest of plot was produced on Monday night with success. "First Affections" is an adaptation by Mr J. Palgrave Simpson, of an old French comedietta, entitled "Invitation à la Valse."

COMMERCIAL TIMES

Weekly Price Current.

☞ the prices in the following list are carefully revised every Friday afternoon, by an eminent house in each department.

LONDON, FRIDAY EVENING.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The half-yearly reports of several of the leading British railway companies have been published. The London and North-Western state that the gross revenue for the six months ending in December was 2,104,206*l*, showing an increase over the same period of 1858 of 197,048*l*, while the working expenses were 828,604*l*, or only 42,266*l* more, leaving a net augmentation of 154,782*l*. The continued growth in the traffic has rendered necessary various improvements on the company's system, and an increase in the rolling stock being required, it is proposed to devote 120,000*l* for that purpose in the current half-year. Extensions of station and other accommodation are also recommended. A renewed application has been made to Parliament, in concert with the Great Northern and Manchester, Sheffield, and Lincolnshire Companies, for powers of agreement. The proposed dividend is at the rate of 5½ per cent. per annum against 4½ in 1858. The directors of the Midland announce that a considerable increase (59,448*l*) has taken place in the traffic in the past six months. The working expenses have also augmented, being 39*l* 1s per cent. against 38*l* 16s in 1858.

EASTERN COUNTIES.—The directors of this company have declared a dividend of 6s 9d per share for the half-year, being at the rate of 1*l* 13s 9d per cent. carrying forward about 3,000*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Feb. 13.—The railway market was comparatively firm the whole day, although the decline in the funds caused most of the leading descriptions to leave off slightly lower than on Saturday. Foreign descriptions were rather heavy, Lombardo-Venetian in particular showing a decline. No alteration of importance occurred in American railway securities. Victoria Government debentures (new) improved to 110⅜ to ½. Mines, joint stock banks, and miscellaneous descriptions generally, closed the same as on Saturday. The new Canadian loan left off 2 premium scrip and 100 to ½ bonds.

TUESDAY, Feb. 14.—The railway market showed increased buoyancy, and closed at a nearly general advance. South-Eastern stock again was in considerable demand, and improved 1⅛ per cent., the final price being 88 to ¼. Midland is also 1⅛ higher, and most of the other leading descriptions ¼ to ½. Colonial and foreign descriptions did not generally participate in the rise in home stocks; but in one or two instances showed an advance, especially Buffalo and Lake Huron, Grand Trunk of Canada, and Lombardo-Venetian; the latter shares were last quoted 1⅛ to ¾ premium. No change of importance took place in American securities. Mines were dull and occasionally lower. There was a fair demand for bank shares, the principal inquiries being for Union of London. In miscellaneous descriptions a rise occurred in Canada Land. Bank of Turkey left off ¼ discount to ¼ premium.

WEDNESDAY, Feb. 15.—Notwithstanding the heaviness in the funds, the railway market continued comparatively firm, the final arrangement of the account showing numerous small purchases for investment by the public during the past fortnight, which have completely cleared the market of stock. The principal change to-day was a decline of 1 per cent. in Caledonian, on the announcement of the dividend. London and North-Western, Great Western, South-Eastern, and Eastern Counties were also slightly lower; while Midland, South-Western, and North-Eastern were steady. In the colonial market, Grand Trunk of Canada receded to 35 to ½. Indian guaranteed, on the other hand, were firmer. Foreign shares show no change of importance. Lombardo-Venetian closed 1⅛ to ¾ pm.; and San Paulo, ⅝ to ¾ dis. In American securities, the bonds and shares of the Michigan Central advanced. New Victoria Government debentures likewise improved to 111 to ¼. Mines were dull, and in several cases exhibit a reduction. Bank shares continue steady; Commercial of London are especially quoted higher. In miscellaneous descriptions, Madras Irrigation slightly receded.

THURSDAY, Feb. 16.—The railway market was dull, and, in the absence of business, several of the principal stocks showed a slight decline. Caledonian, however, rallied ½ per cent. In colonial descriptions an advance took place in Buffalo and Lake Huron; Grand Trunk of Canada closed steadily at 35 to ½. Foreign railways, especially French and Lombardo-Venetian, were rather flat. Pernambuco left off 1⅛ to ⅝ discount, or an eighth lower, and San Paulo ¾ to ⅞ discount. American securities show no change of importance. The new Victoria Government debentures were again better, at 111 to ¼. Mines were quiet but firm. The principal movement in bank shares was a rise in Otteman to 19½ to 20, on the announcement of the dividend. Miscellaneous descriptions closed about the same as yesterday.

FRIDAY, Feb. 17.—A very limited amount of business has been transacted in the railway share market, and little variation of importance has taken place in prices. The foreign and colonial undertakings have also shown very little variation. Joint stock bank and miscellaneous shares remain moderately active at former rates. London Joint Stock 31½. London Chartered of Australia, 22¾. Bank of Australasia have declined to 79; and Ottoman Bank to 19¾ 19⅝. Electric Telegraph are steady at 104. Australian Agricultural are 32 to 32¼; and Royal Mail Steam, 52.

S. W. SILVER AND CO., OUTFITTING WAREHOUSES, 66 and 64 CORNHILL, E.C.

Special Outfits for Australia, India, and China, for Naval and Military Officers, Cadets, Midshipmen, and Civilians. Clothing for Gentlemen's Home Use,—viz., Naval and Military Uniforms and Civilian Dress of the best Materials and Workmanship. Shirts, Hosiery, Gloves, &c. Ladies' Outfits. Furniture for Camp, Barrack, Cabin and Colonial use, embracing every variety of Cabinet Work, Canteens, Trunks, Portmanteaus, &c., portable and suited to all climates.

Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped "G. and J. Deane, London Bridge," and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed "G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and to be had of all booksellers.

HOLLOWAY'S PILLS AND OINTMENT.—Debility—Consumption.—In no disease are the results of the alterative and tonic influence of these invaluable remedies more apparent or more gratifying than in the feeble condition of the body which precedes consumption. A change for the better is observed ere this treatment has been followed for a week, and the improvement steadily progresses; the melancholy emaciation gives place to health, strength, and cheerfulness. The ointment should be rubbed most effectually between the shoulders, on the chest, and left side. Two pills should be taken nightly, the air should be sought, solids eaten, slops avoided. This treatment, duly followed, will soon arrest both cough and feverishness; while the perspirations and debility will daily decrease till strength returns.

INTERESTING TESTIMONIAL IN FAVOUR OF DR LOCOCK'S PULMONIC WAFERS.—From Mr T. J. Davis, Chemist, Rhosmaen street, Llandilo, Dec. 16th, 1859.—"Marry's cottage, near Llandilo, Dec. 15th, 1859.—Sir,—I have been for fifteen months afflicted with confirmed Asthma, attended with violent coughing. I have tried nearly all supposed remedies without any relief; but, providentially, I am happy to inform you that I was considerably relieved by taking two boxes of Dr Locock's Pulmonic Wafers. You can make this public—I am Sir, yours faithfully, WILLIAM JENKINS, Calvinistic Methodist Minister. To Mr T. J. Davis, Chemist, Llandilo." Dr Locock's Pulmonic Wafers give instant relief and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. Price 1s 1½d, 2s 9d, and 11s per box. They have a pleasant taste. Sold by all druggists.

BENSON'S WATCHES. "Perfection of mechanism."—MORNING POST. Gold, 4 to 100 Guineas. | Silver, 2 to 50 Guineas. Send 2 stamps for Benson's Illustrated Watch Pamphlet. Watches sent to all parts of the world free per post. 33 and 34 Ludgate hill, London, E.C.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH is the only STARCH used in HER MAJESTY'S LAUNDRY. And as some unprincipal Parties are now making and offering for Sale an Imitation of the GLENFIELD STARCH, we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony. WOTHERSPOON and CO., Glasgow and London.

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

HEAL AND SON'S ILLUSTRATED CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road, W.

ALLSOPP'S PALE OR BITTER ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

LONDON	At 61 King William street, City.
LIVERPOOL	At Cook street.
MANCHESTER	At Ducie place.
DUDLEY	At Burnt Tree.
EDINBURGH	At Union street lane.
GLASGOW	At 115 St Vincent street.
DUBLIN	At 1 Crampton quay.
CORK	At 25 Cook street.
BIRMINGHAM	At Temple street.
WOLVERHAMPTON	At Exchange street.
WORCESTER	At the Cross
SOUTH WALES	At 13 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

TEETH.—BY HER MAJESTY'S ROYAL LETTERS PATENT.—Newly-invented and Patented Application of Chemically-prepared INDIA RUBBER in the Construction of Artificial Teeth, Gums, and Palates.

MR EPHRAIM MOSELY, SURGEON DENTIST, 9 Grosvenor street, Grosvenor square, Sole Inventor and Patentee.—A new, original, and invaluable invention consisting in the adaptation, with the most absolute perfection and success, of chemically-prepared INDIA RUBBER in lieu of the ordinary gold or bone frame. The extraordinary results of this application may be briefly noted in a few of their most prominent features:—All sharp edges are avoided; no springs, wires, or fastenings are required; a greatly increased freedom of suction is supplied: a natural elasticity hitherto wholly unattainable, and a fit perfected with the most unerring accuracy, are secured; while, from the softness and flexibility of the agent employed, the greatest support is given to the adjoining teeth when loose, or rendered tender by the absorption of the gums. The acids of the mouth exert no agency on the chemically-prepared India Rubber, and, as a non-conductor, fluids of any temperature may with thorough comfort be imbibed and retained in the mouth, all unpleasantness of smell or taste being at the same time wholly provided against by the peculiar nature of its preparation. Teeth filled with gold and Mr Ephraim Mosely's White Enamel, the only stopping that will not become discoloured, and particularly recommended for the front teeth.

9 Grosvenor street, Grosvenor square, London; 14 Gay street, Bath; and 10 Eldon square, Newcastle-on-Tyne

MR LEWIS AND SON, 113 Strand.—The Royal Lewisian Systems o Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible systems, insures perfection in any of the above branches after a few easy and interesting lessons. Persons unable to take the lessons may obtain the inventor's works for self-instruction at his only institution, 113 Strand

GOOD NEWS FOR SMOKERS.—NO PUFFING REQUIRED.—Buy the new Patent MEERSCHAUM DUST BILLIARD PIPE, the most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. "Man wants but little here below," but that little must be the most perfect short pipe that can be got, and it only CAN be got, with all its rapidly colouring advantages, at the "Waterloo" Tobacco and Pipe Establishment, 193 Waterloo bridge road —Sample pipe in case sent post free for 28 stamps.—EDWARD PILLINER, Patentee.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD LIVER OIL
administered with the greatest success in cases o CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuinness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted, Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NON CAN POSSIBLY BE GENUINE, by respectable chemists.
SOLE CONSIGNEES.
ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

DR KAHN'S MAGNIFICENT ANATOMICAL MUSEUM, top of the Haymarket (acknowledged by the whole of the Press to be the most useful and instructive of any in existence), is open daily for Gentlemen only, from 12 till 5, and from 7 till 10. Admission One Shilling. Descriptive handbooks gratis. Dr Kahn's Popular Lectures on the "Philosophy of Marriage," daily at 3 and 8 o'clock precisely. N.B. Dr Kahn's Treatise on the above subjects, entitled "The Philosophy of Marriage," sent post free on receipt of 12 stamps, direct from the author, Harley treet, Cavendish square, W

NO MORE MEDICINE.—For Habitual, Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and Incipient Consumption, we find it the safest remedy. Dr Ure, M.D.F.R.S.; Dr Harvey; Dr Bright, Dr Sherland; Dr Campbell.

At a cost of about a penny per meal, speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hœmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Plaskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, at 1s 1½d; 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly, London; and all grocers and chemists.

HOMŒOPATHIC COCOA.—TAYLOR BROTHERS' HOMŒOPATHIC COCOA is unequalled as an article of Diet for Homœopathic Patients, Dyspeptics, and Persons of delicate constitution.
Sold by all Grocers, in Tin Foil Packets, at 1s 4d per lb

KEATING'S COUGH LOZENGES.—Statistics shew that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; be, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Calnscross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, sir, your most obliged servant, W. J. TRIGG."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer,

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases o WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price rom 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER, 228 Piccadilly, London

Post free for Two Stamps.
EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies patented Incorrodible Teeth without extracting Teeth or stumps, on his never-failing and painless principle of Self-adhesion; rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his Osteoplastic Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

THE HUMAN HAIR
Just published, price 1d, the 76th edition of
GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.
Consultations from 10 till 3, and 6 till 8. Sundays from 10 till 1.

RAIL PAID TO ANY STATION IN ENGLAND.

VERY CHOICE MARSALA OR BRONTE WINE.

THOMAS NUNN and SONS have great pleasure in bringing this excellent yet economical Wine to the notice of their customers; the approvals of it continue numerous and most flattering; it is of the highest quality well matured and full-bodied, and so thoroughly clean tasted that it will go on improving for years to come; and has this advantage over Sherry, that it may be taken by the most delicate person without causing acidity in the stomach. Their selections have been made with so much care, that they have no hesitation in saying the most perfect satisfaction will accrue to every purchaser.

30s per doz. £8 14s per 6 doz. £15 10s per ¼-cask.

From THOMAS NUNN and SONS, Wine, Spirit, and Liqueur Merchants, (upwards of 43 Years Purveyors o the Honourable Society of Lincoln's Inn,) 21 Lamb's Conduit street, Founding Hospital.

*** A Priced List of every kind of Wine, Spirit, and Liqueur sent on application.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

OILS, SOAPS, AND CANDLES.—

The original Depôt for LILLE COLZA OIL of the purest importation, 4s 6d per gallon, in any quantity. Household Yellow Soaps, 36s, 40s, 44s, 46s and 48s per cwt. The most durable Soaps in the trade. Store Dip Candles, 7½d per lb. Wax-wick Moulds, 8½d per lb. Price's Composites, 8d, 9d, 10d, and 11d per lb. Lists free on application. Town deliveries daily per own carts.

WHITMORE and CRADDOCK
16 Bishopsgate street within, E.C., London.
Five pounds worth of goods railway free.

DREADFUL ACCIDENTS FROM FIRE.—

The numerous painful deaths that have occurred during the present season from ladies' dresses taking fire, would have been prevented by the use of the Panklibanon Registered Safety Fire Guard, price from 10s each. They are nearly invisible, do not obstruct the heat, and require no fixing. No fire-place should be without one of these life-preservers. The public are invited to view them at the Panklibanon General Furnishing Ironmongery and Electro Silver Plate Warehouse, 56 and 58 Baker street. Illustrated books sent free.

N.B.—Colza Oil, of the finest quality, 4s per gallon.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates.

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., prevanting the radiation of Heat, nd saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London nd at 2 Gorea Piazaas, Liverpool.

FLEET STREET.
A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST,

52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly rasemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found saperior to any teeth ever before used. This method does not requirs the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

A TOILETTE REQUISITE FOR THE SPRING.—

Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street north, Strand, W.C.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

SURPLUS MERCHANDISE.

—Manufacturers, Wholesale and Retail Houses, Shippers, Fire and Marine Insurance Companies, &c., will find great facilities for clearing out, at fair prices, Surplus or Salvage Goods, presented by

MR LILWALL'S MONTHLY PUBLIC SALES, at his light and spacious rooms, 6 Old Fish street, Old Change, E.C.

[Referring to the above, it is respectfully submitted—1. That goods which hang on hand in a particular class of trade will often find a ready sale if transferred into a new connection, where (if in fair condition) they will present to the consumer much of the charm, while possessing all the intrinsic value, of articles fresh from the loom. 2. That upon the principle that "the first loss is the least," it is to the interest of holders of dead stock to turn the same into cash, rather than allow it to remain on their shelves, incurring further depreciation, and rendering the capital it represents, meanwhile, unproductive. 3. That by shopkeepers selling their old stock at reduced prices to their regular customers, they, to that extent, preclude themselves from disposing of other articles yielding the ordinary rate of profit. 4. That London being the market of the world, goods, of whatever class or kind, when submitted here to public competition, generally secure ready buyers, while, by thus calling into play the competition of rival traders, the highest market price at the time obtainable is likely to be realised. It is believed that, for these various reasons,

Mr Lilwall's Monthly Public Sales will be found a great convenience to sellers and buyers alike.]

*** For further particulars respecting these Public Sales, see "Lilwall's Mercantile Circular" for March, 1860.—Kent and Co., Paternoster row; and, by order, of all booksellers.

MR HOWARD GLOVER

respectfully announces that his Grand Annual CONCERT will take place at DRURY LANE THEATRE, on Monday Morning, February 20, commencing at One o'clock, when Mr Sims Reeves will appear, in conjunction with all the other greatest artists at the moment in London.

Offices, 71 Lombard street, 37 Regent circus, and 35 Leadenhall street; and St Katharine Wharf.

PROSPECTUS OF

THE OAKERTHORPE IRON AND COAL COMPANY (Limited).

Constituted and Incorporated with Limited Liability under the Joint Stock Companies' Acts, 1856 and 1857.

Capital £120,000, in 12,000 shares of £10 each.

COMMITTEE.

William Worswick, Esq., Leicester (Swannington and Coleorton Collieries, Leicestershire.)
Thomas Walker, Esq. (Patent Shaft and Axletree Company), Brunswick Ironworks, Wednesbury.
Frederick Palmer Morewood, Esq., Leamington (and Swanwick Collieries, Alfreton.)
Edwin Marshall, Esq. (Brown, Marshalls, and Co.), Birmingham.

MANAGER AT THE WORKS—Mr William Evans, formerly of the Dowlais Iron Works, Merthyr Tydvil.

CONSULTING ENGINEERS — Messrs Woodhouse and Jeffcock, Derby.

BANKERS—The Derby and Derbyshire Banking Company, Derby and Belper; Messrs Williams, Deacon, and Co., London; Messrs Spooner, Attwoods, and Co., London; Messrs Attwoods, Spooner, Marshalls, and Co., Birmingham.

SOLICITORS—Messrs Stuart and Baly, 6 Gray's inn square, London.

AUDITOR.—C. Walford, Esq., F.S.S.

SECRETARY PRO TEM.—Mr Edward Corry.

REGISTERED OFFICE.

8 New Broad street, City, London, E.C.

The Oakerthorpe estates, comprising upwards of 1,000 surface acres, abounding in coal and ironstone of superior quality, are situate immediately contiguous to the town of Alfreton, and communicating with the Midland Railway by a branch line, intersecting the whole, at the Wingfield station, 14 miles north of Derby, in the immediate vicinity of the celebrated Butterley, Clay Cross, Swanwick, and Wingerworth collieries and ironworks.

These estates are held under leases for long terms for mining purposes at low royalties, viz., at the rate of 4½d per ton on coal, and 6d per ton on ironstone.

The minerals have been developed, workings carried out, and a blast furnace erected under the able supervision of Messrs Woodhouse and Jeffcock, the eminent mining and civil engineers, of Derby. Large quantities of coal and ironstone have been already raised, and their superior quality fully tested.

Shafts have been sunk, headings are being driven, railways are made, pumping and winding engines and other requisite machinery erected, and preparations are making for raising 2,400 tons of hard and furnace coal per week, and a sufficient quantity of ironstone for feeding two blast furnaces capable of making upwards of 280 tons of pig iron per week.

During the last two years the collieries and one blast furnace have been in active operation, the furnace producing iron of the highest character, and proving incontestably the excellency both of the stone and coal, and their adaptability to each other.

The pig iron and coal have both, from the first, found ready markets, and have given the greatest satisfaction to consumers. The demand for them is constantly increasing.

The coal and ironstone are got at extremely moderate rates, and limestone for fluxing, for which Derbyshire is celebrated, is procured to unlimited quantities, and at a low price, from the neighbourhood.

The whole of the materials for the manufacture of iron, whether pig or bar, being so readily obtainable, it is obvious that the locality is eminently adapted for the production of the best qualities of iron, at a minimum cost, and that works upon an extensive scale will pay a high per centage on the capital proposed to be employed.

The present proprietors have invested upwards of £60,000 in opening out the collieries and ironstone workings, sinking pits, erecting furnaces, pumping, winding, and blowing engines, engine-houses, fitting shops, managers' and workmen's houses, pneumatic lift, and all other machinery and plant (including 180 railway waggons) necessary for the efficient carrying on of the collieries and furnaces.

The second blast furnace in course of erection, and nearly completed, will ensure the consumption of the present yield of ironstone and the production of 280 tons of hot blast forge and melting pigs weekly as proposed.

The extreme purity of the furnace coal rendering it most suitable for puddling purposes, and the quality of the pigs having been most satisfactorily proved at some of the best works in Yorkshire and Staffordshire, it is proposed, hereafter, to extend the works, and erect another blast furnace (the foundation of which is laid), with a mill and forge, to convert its produce into malleable iron, as thereby the profits of the undertaking will be materially increased, and the full benefits that should result from a vigorous working of the estates be obtained.

To ensure the more steady and complete realisation of the advantages to result from carrying out the foregoing plan, the lessees are desirous of forming a Joint Stock Company, with limited liability, and of assigning thereto all their interest in the leases, workings, machinery, stock, and plant, in consideration of the repayment of their outlay without bonus, contributing themselves at least one-fourth of the proposed capital of the Company.

The profits of the undertaking it is estimated will be fully equal to 15 per cent. per annum on the capital employed.

It is proposed to call up the capital by five calls of £2 each per share; the first call being payable on allotment; the second call, March 31; third, May 31; fourth, July 31; and the remaining £2 as the extension of the works may require.

Applications for shares may be addressed to the Secretary pro tem., at the offices of the Company, 8 New Broad street, London; to the Consulting Engineers, Messrs Woodhouse and Jeffcock, Derby; or to the Solicitors, Messrs Stuart and Baly, 6, Gray's inn square, London.

REPORT OF THE CONSULTING ENGINEERS TO THE COMPANY.

Midland road, Derby, Dec. 24, 1859.

To the Committee of the Oakerthorpe Iron and Coal Company (Limited).

Gentlemen,—The mines of coal and ironstone referred to in the accompanying prospectus lie under a surface of about one thousand acres, and include all the more valuable seams of coal and rakes or beds of ironstone found in Derbyshire.

Both coal and ironstone can be worked at a moderate cost, and iron can be made here at as low a rate, and of as good a quality, as at any of the works in the county.

The iron has been sold in various parts of the Kingdom, and pronounced to be of excellent quality, and the coal finds a ready market at remunerative prices.

The works are very favourably situated in every respect, being within 200 yards of the main line of the Midland Railway, with which they have direct communication, for the ready transit of their produce, and all the materials for the production of iron lying on the spot, it is almost impossible for a property of this nature to possess more advantages.

The royalties to the lessors are low, being only 6d per ton on ironstone, and £75 per acre for coal, being 4½d per ton.

The whole of the results of past outlay are available for future operations.

We have read and carefully considered the Prospectus of your Company, and are of opinion that the prospects of the undertaking fully warrant the expectations held out therein.—We are, Gentlemen, yours faithfully,

WOODHOUSE and JEFFCOCK.

FORM OF APPLICATION FOR SHARES.

To the Committee of the Oakerthorpe Iron and Coal Company (Limited).

GENTLEMEN,—I request you will allot me Shares in the said undertaking; and I hereby agree to accept the same, or any less number that may be allotted to me, and to pay the calls thereon, in conformity with the regulations of the Company.

Signature.
Name in full.....
Residence .....
Occupation, if any, or description .....
Date .....

Printed forms may be had on application.

ANGLO-PERUVIAN DEBT.—The Dividends on the Four-and-a-Half per Cent. Active Bonds becoming due on the 1st March next, will be PAID by Messrs ANTONY GIBBS and SONS, on that or any following day, between the hours of 11 and 2. Lists may be had on application on and after the 20th inst., and the Coupons must be left three clear days for examination.

15 Bishopsgate street within, London, Feb. 13, 1860.

IMPERIAL TURKISH SIX PER CENT. LOAN of 1858, £5,000,000.

Notice is hereby given, that the HALF-YEARLY DIVIDEND, due on the 1st March next, on the Bonds of the above Loan, negotiated by Messrs Dent, Palmer, and Co., will be PAID at their counting-house, No. 11 King's Arms yard, E.C., on that day, or any subsequent day, except Saturday, between the hours of eleven and three. The coupons, with a list in numerical order, must be left for examination two clear days previously. Coupons are not received on Saturdays. Printed forms of the lists may be had on application.

Notice is also given, that the Bonds of the above Loan drawn in December last for redemption on the 1st of March next, as advertised by the Turkish Ambassador, amounting to £50,000, will be paid off at par on that day, or any subsequent day, except Saturday, between the hours of eleven and three, on presentation to Messrs Dent, Palmer, and Co., as above.

London, Feb. 16, 1860.

NATIONAL DISCOUNT COMPANY (LIMITED), 35 Cornhill, London. Subscribed Capital, £2,000,000. Paid up, £385,345.

Approved mercantile bills discounted for parties properly introduced.

Money received at interest on deposit, repayable on call or at fixed periods.—By order of the Board,

RICHARD PRICE, Secretary.

Cornhill, February, 1860.

THE TRUST AND LOAN COMPANY of UPPER CANADA. Incorporated by Royal Charter. Capital £1,000,000.

TRUSTEES.

Thomas Baring Esq., M.P. | G. Carr Glyn, Esq., M.P.

DIRECTORS.

The Right Hon. Edward Pleydell Bouverie, M.P., President.

William Chapman, Esq., Deputy Chairman.

James Hutchinson, Esq. | Matthew Uzielli, Esq.
Charles Morrison, Esq. | T. M. Weguelin, Esq.
William G. Thompson, Esq.

BANKERS—Messrs Glyn, Mills, and Co.

The Directors are prepared to grant Debentures for loans of sums of £100 and upwards, for periods of 3, 5, 7, or 10 years.

Any information required can be obtained on application to the Secretary. FRED. FEARON, Secretary

65 Moorgate street, London.

THE CORPORATION RESTAURANT COMPANY (Limited). Incorporated under the Joint Stock Companies Acts, 1856 and 1857. Capital £10,000, in 5,000 shares of £2 each, with power to increase to £50,000; deposit 10s per share. DIRECTORS.

William Lewis Thomas, Esq., Middle Temple, and Streatham place, Brompton.
H. Whitehead, Esq., 7 Whitehead's grove, Chelsea.
James Stodart, Esq., 31 Cloudesley terrace, Islington.
Charles Beeching, Esq., 7 Great Windmill street, Haymarket.
Thomas J. Joy, Esq., 12 Clarendon terrace, Maida hill.
(With power to add to their number.)

BANKERS—The Commercial Bank of London, Lothbury.

SOLICITORS—Messrs Vallance and Vallance, 20 Essex street, Strand.

SECRETARY—James Durrant, Esq.

TEMPORARY OFFICES—73 Cheapside.

Applications for the remaining Shares to be made to the Secretary, at the offices, 73 Cheapside.

THE PRACTICAL OBJECTIONS TO THE COMMERCIAL TREATY.

THE public mind has arrived at a conclusive, and we believe a just, judgment on the preliminary questions raised by the Commercial Treaty with France. It is generally agreed, as we ventured to anticipate that it would be, that there is nothing in the Treaty contrary or detrimental to the progress of the principles of free trade; and it is also for the most part thought that though there may be circumstances in the mode of contracting the Treaty which we could have wished to be different,—though we might certainly have reasonably desired that the treaty should have been sanctioned by the Legislative Body—such as it is—of France, instead of being summarily concluded by the Emperor himself,—yet that, on the whole, there is nothing in these circumstances which need prevent us from fairly considering the substance of the Treaty itself, and seeing whether its details are really to our advantage or not. It is in this spirit that we proceed to consider the practical objections to the Treaty that have recently been urged.

In the first place, it is commonly objected that we have engaged for ten years not to prohibit the exportation of coal, and even not to impose a duty on it. We certainly admit that there is a strong antecedent presumption against the expediency of general "self-denying ordinances," if we may so call them, of this kind. It is undoubtedly a grave matter to make a general stipulation with any foreign Power, that you will not do this or that within the realm, and will not impose such and such duties on the exportation of such and such commodities. But is it reasonably likely that in the present case any substantial evil will arise from the contract which has been made? In the first place, it is evident that if we wished to prohibit, say for any military reason, the exportation of coal, we must, in the present state of the commercial world, make the prohibition a general one. It would not be *possible* to say you may expert coal "to Prussia and not to "France," "to Sardinia and not to Belgium." Even if such a partial prohibition were observed, it would on the face of it not be a real prohibition, but only equivalent to the imposition of a certain export duty. Coal really intended for the country to which its export was prohibited, could be taken to the countries to which its export was permitted, and from thence sent forward to the quarter for which it was from the first destined. There would be an additional expense undoubtedly in a traffic so circuitous. Such a partial prohibition would, if it were practically effected, be, to the extent of that expense, a differential duty on the export of the article to which it referred, but it is very dubious if it could be really effected. Ships may clear for particular ports, but there is no way of securing that they shall go to those ports, Many ships would be entered as having sailed for a place to which the export of their cargo was allowed, and would really go to the place whither its export was prohibited. Any prohibition, therefore, on the export of such an article as coal would fail, unless it were made general; and before it is made general, we should consider the number of countries we trade with which would be affected by such a provision. The following is the list of our exports of coal to various countries during the year 1859:—

	Coals and Culm. Quantities. tons	Declared Value. £
To Russia	347,733	155,260
Denmark	462,293	190,389
Prussia	393,748	157,809
Hanse Towns	523,232	220,040
France	1,390,726	615,442
Spain and Canaries	427,332	217,222
Turkey	218,284	100,947
United States	204,517	165,161
Malta	179,061	86,367
British West Indies	98,051	50,740
Other countries	2,743,203	1,306,797
Total	6,979,180	3,266,174

We see at once from this table how complicated the English coal trade really is, and to how many countries the effect of any general prohibition on its export would extend. Even France, which now takes a much larger quantity of our coal than any other single country, only takes a little less than a fifth of the whole coal which we export. A general prohibition on the export of coal would, therefore, be almost the last measure to which this country would be likely to resort. It would complicate our trade with too many countries, and array against us the hostile feelings of half, or more than half, the commercial world. Nor would a duty on the exportation of coal be at all a probable resource to which a Chancellor of the Exchequer would resort for increasing the revenue at his disposal. It would be a most unpopular tax, and would impair the profits of, and limit the market which is open to, the persons engaged in one of the principal branches of our mineral trade. They would oppose it, and they would probably succeed in defeating it. Nor would they be the only class of traders injuriously affected. English commerce has of late attained a development of which the effects on the trade we are discussing have been very remarkable. Wherever Englishmen go, they take *steamers* with them. No sooner has English commerce established itself to any considerable extent in any particular quarter of the globe, than a line of packets is set up to facilitate our countrymen's operations and to suit their convenience. The exports of coal for these purposes is very large indeed, and coal freighted for the service of the companies which own steamers in various parts of the globe, and often in the most remote,—say on the West coast of South America or the East coast of Hindostan,—is very large indeed. "Coal freights," as those who are familiar with that branch of trade well know, are a very serious item in the calculations of shipowners, and any duty on the export of coal would not fall, as might be at first imagined, on the

foreigner at all, but on our own trading classes. It would be a sudden tax on particular persons who are engaged in a very important enterprise in all quarters of the globe, who are everywhere aiding our communications and facilitating our trade, and who are, therefore, adding incalculably to our wealth,—and we may, therefore, be sure that we should consider well before we imposed any such tax. We may be sure that it could only be justified by some sudden and extreme emergency. We know, moreover, that for such emergencies we have great resources in the "financial reserve" of direct taxation,—that in consequence of the unbounded credit of the country we have ample subsidiary resources from the money market of all the world,—that, in fact, according to every reasonable probability, we should never resort to it. Although, therefore, we quite admit, and should be ready on proper occasions strenuously to maintain, that there is a very great presumption against all such conditions in commercial treaties as that we have been discussing, we do not think that in this particular case there is any reason whatever for apprehending that we have relinquished anything valuable, or promised to refrain from doing what we should ever, without that promise, have thought of doing.

It is objected, in the second place, that by the present Treaty with France we have engaged to supply her with articles of which she stands in great need, and have only to look to her in return for mere luxurious articles, of which we, as an entire nation, stand in very little need. But it will be found on investigation that this objection strikes not particularly or specially at the present Treaty with France, but at trade with France as a whole and at all times. *We* have from the bounty of nature a vast command over the two great *instruments* of industry,—coal and iron. France has not any equal, or even comparable command over them. On the other hand, her soil is admirably adapted to the growth of the vine. Her people have a singular skill in producing, manufacturing, and elaborating very many kinds of luxuries. The very position of these two countries, and not the special conditions of any particular treaty, raises the broad question: Shall England exchange her products, industrially valuable as they are, for those of France, which—broadly speaking—are not of use in industry or production? On such a question, when it is stated clearly, no real Free-trader will have an instant's difficulty in forming a judgment. He will at once say, —'*My* principle is, that the dissimilarity of countries is the 'bond of union between countries: the fact that products of the 'English soil are very valuable to the productive capabilities of 'France, so far from being a reason why I would withhold 'them from her, is the strongest of all possible reasons why 'I would impart them to her. I *wish* our commerce to be 'inestimably valuable to her, and the more you can prove it 'to be so, the better I shall be pleased.'

It is said, however, that we ought not to extend the advantage of our coal and iron and our machinery to France, unless France will apply the whole principle of free trade to our manufactures; that is, it is in substance argued, that we should not give France our exports without duty, while she reserves the right of imposing a duty of limited amount on *our* manufactures. It would undoubtedly be for our interest that France should wholly as well as partially imitate our example. The more of our manufactures she takes, the more we, as well as her own people, would be benefited. But there is no reason why we should not begin to trade with her in what she will take, because she will not take from us something *else* which it would also be for her advantage to take. We should not refrain from obtaining attainable profits—from largely increasing the benefits of commerce, because other profits are not attainable, and other ways of augmenting those benefits are denied to us. Common sense teaches that we should do what we can, and get what we can, and not be disheartened at what is withheld from us. As to the fear that protection will foster successful rivals to our manufacturers in France, we do not apprehend that that enterprising and able class of men have any such fear. We have seen in this country that protection rather limits a trade by diminishing the incentives to industry, than augments it by the peculiar profits which it delusively promises.

A more specious objection to the Commercial Treaty is that of the shipowners. They say that it is very hard that our trade should be open to French ships and the French trade not equally open to our ships, and that some provision ought in this Treaty to have been made for rectifying the injustice. And, undoubtedly, it would be most beneficial that France should repeal her Navigation Laws. They are more absurd even than ours were. We had at least the excuse that our Navy was our principal protection, and that the maintenance of these laws had always been thought necessary to the efficiency of our Navy. But the Navy is not the mainstay of France; at best it is to her a secondary and subsidiary arm. The whole basis of the political argument which for so long supported our restrictive legislation does not therefore apply in the least to her. Her legislation can only be supported by economical arguments, and economical arguments are certainly and plainly against it. Nothing, therefore, can be more desirable than a repeal of the French restrictions on English shipping; but it does not follow that we must wait for *all* commercial intercourse with France till she becomes alive to this particular error. We regret that she is so unwise as to impede the trade of our ships, but that does not make it necessary or wise in us to impede the general trade of England.

On the whole, therefore, there is nothing in these three objections, which are those most commonly urged, that should lead us to disapprove of, or to shrink from ratifying, the Commercial Treaty with France.

THE NEW SPEAKER AND THE PARTY OF COMPROMISE IN THE HOUSE OF REPRESENTATIVES.

American politics seem to us to attract far less attention in England than they deserve. We admit that they are full of sad and ominous meaning. We know no reading more painful than the reading of the debates in the House of Representatives. Their tone is not a tone which Englishmen can well understand when we look at the magnitude and the gravity of the principles at issue in the present crisis. The discussion even of a budget in England brings out a deeper, graver, and more responsible tone of speaking than the discussion of the most fundamental of political and social principles in the United States: and that it is so,—so long as it is so,—let us be thankful, without bearing too hard on a country placed in a very different, and in many respects much less anxious political position than our own. But, notwithstanding all the repulsive elements in American politics, it seems to us wonderful that at the present day they should not attract more close and anxious attention than they do. The question of a treaty or no treaty with France, — even the questions affecting Central Italy,—are utterly insignificant in moral and political result when compared with that which now convulses the North American Continent. Perhaps it may be said that England can exert a very powerful influence in Italy,—and little or none in the United States. The former is true,—the latter untrue. Directly, no doubt, we cannot arbitrate in the feud between the North and the South States. But the mere tone of English criticism and the attitude of English attention will exercise a far larger *indirect* influence on the discussions in the United States than we could ever exercise by the same means in Italy. And yet, while every week sees hundreds of disquisitions on Italian politics, we scarcely find any directed to that far wider subject which involves the whole moral and social future of our own, and unfortunately also of another, race in North America.

The contest for the Speakership of the House of Representatives is over at last. Mr Pennington, of New Jersey, a sort of Compromise or Whig Republican, has obtained the exact number of votes necessary to elect him to the Speakership;—a single one less and he would have failed. Mr Pennington is not of the "Black Republican" party, as it is called —not inclined to admit, while he can help it, that any crisis is at all impending. He is rather of the ostrich school of politicians, who think to get over all the most imminent perils by burying their own eyes in the sand. He owes his election by no means to his own party alone. Many good supporters of Slavery in the Southern States,—many of the "silver grey "Filmore Whigs," as they used to be termed, or the "Maho-"gany Whigs slightly varnished with Republicanism," as they are now termed, seem to have voted for him as a believer in the indissolubility of the Union, and as a conservative Constitutionalist who likes to ignore or hush up a struggle in which he has not the intellectual courage to take a defined part.

There is no symptom which seems to us less hopeful than the large number of politicians of this school in the Northern States. Mr Pennington is an excellent representative of them. On the night of his election he was greeted with a serenade of triumph, and replied to the congratulations of the crowd in the following terms:—

I am very much indebted to you, my friends, for the pleasing visit you have made to me this night. When we hear a national air it always satisfies me that we belong to one country, and I have no belief in the doctrine that the time is near at hand, or can be, that we are to be separated. We are one people, and I trust in Heaven we shall ever remain so. There will always be, in a free country like ours, diversities of opinion, different views, and a great variety of interests which must necessarily prevail; but there is a spirit of patriotism that burns in our hearts that will not yet be extinguished. Our land is a land of freemen, our liberties were achieved by the great exertions and services of our fathers, and I believe no man in this generation will let this blessed inheritance go to pieces. And if we do wrong at one time, you remember he saying of Mr Clay, that old patriot, when he went home to Kentucky after having voted for the Compensation law? On being addressed by some old man, who said, "Clay, you have done wrong." "Well," says he, "my friend, if you were going out gunning, and on pulling your trigger your gun did'nt go off, what would you do? Would you throw it away, or would you try it over again?" "Nay," said he, "I would pick the flint, and try it over." Now, if anything is done wrong in this country, a little time will make it right, because we have a national feeling and a national honour. When I heard the national air played as you came in here to-night, it went to my heart, and I said, "As long as our national songs remain this country will be united." Discordant States! I think no man in his sober senses can agree to any such proposition. I tell you now, there never was a greater mistake than to believe that Northern men have had any bad feelings against Southern men, or the body of Southern men against Northern men. (A voice, "What about Harper's Ferry?") Never mind Harper's Ferry. My friends, that is a nine days' wonder. My friends, it always belongs to republican institutions, that there must be a great variety of public opinion upon all questions, and our only security is to bear and to forbear, and the strength of our institutions depends upon love of country. And if we are not imbued with patriotic feelings there is no hope for the stability of our country. But my faith is this: that we all love our country, and that we will abide by her destiny for good or for evil. I thank you for the high compliment which I feel you have bestowed upon me by this visit. I am glad the House is organised. If this organisation had been effected by the selection of any other gentleman, perhaps it would have been better; but be assured I will endeavour to discharge the arduous duties of the high position to which I have just been elevated as best I can, and to preserve this glorious union intact.

"As long as our national songs remain this country will be united!" Beautiful faith—something like a lady's sentimental conviction that fine words and tender accents cannot go along with a debased and hardened selfishness. There is nothing which it gives us greater pain to read than these futile attempts of those who profess to be on the side of freedom to varnish over the actual facts of the case. Who would suppose that the "diversities of opinion, and different views," which are always likely, according to Mr Pennington, to co-exist in the same country, are social principles so inherently and naturally antagonistic as to elicit such assertions as the following from some of the least intemperate of the supporters of Slavery. "The South," says the *New York Weekly Herald*, "regards New England, at this moment, 'very much in the same light that New England regarded 'Old England about the year 1775. The South regards "New England as its enemy and oppressor, and it is deter-"mined to fight it first in a war of trade and commerce, "and afterwards, if necessary, with gunpowder, the rifle, "the bayonet and cannon."

Mr Pennington and his party may feel quite confident that their attempt at an intermediate line is a mistake of the most disastrous kind. Their opponents see very much more clearly than they do the true issue at stake. No political *union* can permanently exist between States whose fundamental principles as to individual and social liberty are different. The only room for moderation,—the only area left for political temperateness,—is in regard to the rapidity or the gradual character of any change. If the Union is to exist at all, there must be a decisive victory of one party over the other. If the Northern party were to conquer, then there might and would be room for moderation in their mode of preparing to extinguish the Slavery of the South. If the Southern party were to conquer, there might be room for moderation in the working out of any attempt to intrude the principles of Slavery Constitutions into the general system of federal legislation, and to impose them on the New England States. But there can be no moderation in the contest as to the general issue. It is clear as day that no sentimentalising about "national airs" can charm away the malignant hate that is now brewing in the South. It must be either conquered or conquer. Great as must be the sacrifice, the Southern States of America will probably find it easier to disown the national air of "Yankee Doodle," than to give up the peculiar institution on which they set so much store. There are no worse allies for the party of freedom than the hybrid politicians who call such ominous symptoms as the Harper's Ferry insurrection a "mere nine days' wonder,"—who try to disbelieve in a real and unappeasable discord, because it sounds so well to talk of patriotic sacrifices and love of country,—who cannot see that there is a time for declaring battle as well as a time for soothing words,—while there never can be a time for insincere professions,—and that in the United States the time is come when there must be a violent contest and a great victory firmly used to inaugurate a new policy, or else—a dissolution of the Union. Rosewater politicians, like the new Speaker in the House of Representatives at Washington, are a source of weakness to their professed friends, and inevitably play into the hands of their more sincere opponents.

THE PAPER CURRENCY OF INDIA.

THERE is no country in which the admitted advantages of a paper currency would be of so great importance as in India. In that country itself enormous quantities of silver are continually being transferred from one place to another, both for the purposes of trade and for the purposes of revenue. This not only entails upon India a vast expense and absorbs much capital which it would be more wise to employ productively, but it requires that the Government shall keep continually at hand considerable bodies of troops for the purpose of protecting the remittance of its money from one part of the country to another. Nor is the absorption of silver in the East matter of mere local importance. The money market of England, and consequently of the whole world, is deranged by no circumstance more than by the continual necessity of sending, often at inconvenient moments, large supplies of bullion to a distant country, from which, strange as it seems, they never return.

On this subject there can be no doubt. No one has ever questioned that the substitution of a paper currency for a silver currency would be advantageous; but there have been considerable doubts—first, whether such a measure was possible; and next, supposing it to be possible, as to the best form in which it could be embodied. Even so late as the spring of last year the authorities at Calcutta, as is proved by a despatch from Lord Canning, dated 27th of April, were very dubious on both these points:—

It seems to us that it would be unwise to introduce this measure at a time when there is reason to suspect that the security of the Indian Government is regarded with mistrust by the sensitive community with which we have to deal. A refusal, or even an unwillingness to receive the notes, or an eagerness to convert them, might become damaging to the credit of the Government, and seriously embarrassing.

We do not consider it necessary to go into the details of a scheme of paper currency. Upon these we think it would be expedient to take the opinions of some of the most intelligent and influential bankers and merchants in India, before any final determination is come to regarding them.

A recent decision has, however, been now adopted on the subject, of which the general nature is known, though the details are not.

The present financial administrators believe that there is every ground for thinking that the people of the country will use a paper currency to a considerable extent, if a good one is placed within their reach. With regard to the large towns, this has already been settled by experience. As is shown by the following table, the banks of those towns have a very considerable circulation in proportion to their deposits:—

	Accounts Current. £	Bank Notes in Circulation. £
Bank of Bengal	1,254,875	1,283,946
— Bombay	438,459	765,234
— Madras	161,959	192,291
Total	1,855,293	2,241,471

As to the rural districts, the most important transactions are those of the cultivator with the Government as his landlord. If the Government receive a paper currency in payment for the rent, its tenants will not object to pay it in that form: they will use it for their annual transactions, if not for their permanent hoards. If a paper currency were to take the place of a metallic one only in transactions between the Government and its tenants, the saving to the

country, and the amount of capital released, would be very great. If a paper currency were employed to that extent, it could hardly stop there, but would gradually be used in almost all the ordinary transactions of common life.

As to the form of the measure, it has been decided that the new paper currency shall be issued by and based on the credit of the Government of India itself, and we have no doubt that the decision is a very wise one. To decide this matter we need not refer to abstract arguments on the currency, but should consider the facts which press on our attention in India.

If a paper currency were not to be issued by the Government, it must be issued by some bank having a considerable number of local branches distributed throughout the country. Now, the banks at present existing have no such branches. Neither the Bank of Bengal nor that of Bombay have anything of the kind: they are important banks in the capitals of their respective Presidencies, but they have not established themselves anywhere else, and would not think it expedient so to establish themselves. If, therefore, the paper currency of India were to be issued by any banking corporation, it must be by a new one to be created for the purpose; and, accordingly, a plan has been suggested for the establishment of a sort of imitation Bank of England, which should have the management of the circulation just as the Bank of England has here.

The objections to such an arrangement are, however, very considerable and very obvious. The peculiar position and constitution of the Bank of England in this country have arisen from historical circumstances which have not occurred, and in all likelihood will never occur, in any other country. Its division into two departments under Sir Robert Peel's Act is, as would be admitted even by Lord Overstone, a very peculiar arrangement, which it would require great consideration to introduce into any other country. It would scarcely be suggested that we should create a vast Bank of India with the monopoly of the circulation of the country, and without some restriction corresponding to the issue department here. But, even with such a restriction, such a bank must be very objectionable: it would have an inevitable monopoly of the trade of banking, and, as such, would have the great defects which belong to every species of monopoly. In India especially, where the influence of the Government is so great, the establishment of such a bank under legislative sanction would prevent the growth of private enterprise, and permanently give to this one bank the nearly exclusive command of the best business in India. It does not require a long demonstration to prove that this is very objectionable. And it is very dubious whether, even with these contingent advantages, such a Bank of India could be formed. Whether it would be so or not, would depend upon the calculations of Lombard Street, and, previous to trial, no one can know what those calculations would be. A person who was asked to invest money in such an undertaking could not fail to observe that the contemplated advantages, though great, would be distant; that they may be prevented by many calculations which it is not possible as yet to foresee; that the expenditure necessary for creating branches all over India must be large; and that many years would in all likelihood elapse before a good dividend could be realised. Prudent men of business would not—at least might not—be much attracted by such a scheme. The establishment of a paper currency, though indisputably excellent as a political measure, would be of questionable merit as a mercantile speculation.

The peculiar circumstances of India make it desirable that the Government of India should give a guarantee to a paper currency. The natives of India, like all Orientals, are exceedingly dependent on, and much influenced by, the conduct of its Government. It is most desirable, therefore, that this moral influence should be turned to as good account as possible, and one of the most important ways of doing this, is for it to give the sanction of its credit to the immense currency of small notes which it is proposed to diffuse, if possible, through all districts of the country.

Promissory notes, which are to be issued by the Government of India, will of course be payable on demand, and proper regulations will be made for keeping a very large amount of specie in hand to meet a sudden demand. For a considerable time we think that this reserve ought to be very large indeed, and that it should gradually be reduced after a considerable time, when experience shows that it may be done safely. The scheme amounts, in fact, to a Government issue department; and it would be admitted by almost every school of currency, that under such a scheme there can be no excessive issues whilst a proper reserve is maintained.

The risk of forging, which always attends a paper circulation, will be very great in India, and it will require great care to make the best possible provision for preventing it. Something might perhaps be done by sending out the paper, and perhaps even the notes already stamped, from this country; but we need not minutely enter into these details, as they will be, or perhaps have already been, very maturely considered by the financial authorities at Calcutta and at home.

CONSERVATIVE CRITICISM ON LIBERAL POLITICS.

Sir John Walsh has just published a book on "The Practical Results of the Reform Act of 1832," which deserves the attentive study of thinking men among the Liberal party. It is almost always more profitable to study the writings of adversaries than of friends,—provided they be adversaries who are really competent to see the point at issue, and who can meet us therefore on our own ground. This is at least true of Sir John Walsh. He has had much political experience, and he has, moreover, the not very frequent *capacity* for political experience. He can trace the influence of gradual changes, and is not blind to all political tendencies that are not decisively marked. He has both observing and reflecting power, and there is much in his book which will come like home truth to all thinking politicians of the present generation. Nevertheless, there is throughout the book from cover to cover the cold and negative spirit of mere Conservatism,—the stand taken upon the old ways,—that ostentatious refusal on the part of the Present to admit its own competence to criticise and reform the Past, which has been the chronic weakness of Conservatism, and the cause of the great disadvantage at which it has sometimes fought battles which otherwise it might deservedly have won. A principle of mere cautious tradition is strong enough against blind innovation, but utterly powerless against even the show of grievance and injustice. And nothing is more unwise than the obstinacy with which some of the most liberal of the Conservatives cling to a party-name which prevents any positive principle of party-union, and is constantly betraying their leaders into a false position.

Sir John Walsh complains, in this work on the tendency of the Reform Act, that he does not know, and has never known, what the term *Liberal* member means, and that if pressed to define it, he could only say that it means a member who would not accept an invitation from Lord Derby to his followers to meet him in St James's square. But in another part of his book he has betrayed his own consciousness that this taunt, however plausible to one who considers the divergencies of opinion and principle among the Liberal sections of the House, is not in itself true. He says:—

"All Reformers, both now and formerly, allege that the "people ought to govern through and by it [the House of "Commons], and that they are defrauded of a share of their "just right, because it does not rest enough upon the whole "population, and does not feel, think, and act sufficiently "in unison with them.....*We* think that it is the "province of the House of Commons not so much to "follow and express the public will, as to influence "and direct it. We believe that it is necessary for "mankind not altogether to govern, but to be governed; "and that the House of Commons is valuable, not as "a machine by the help of which the whole mass of the "population can actually govern itself, *but as a mode of "government likely to be carried on in harmony with the governed, "and to be justly and equitably administered;*.....in short, that "a moral ascendancy, derived partly from commanding the "convictions of the people, and partly from obtaining their "confidence in those cases where an appeal to their reason is "not practicable, is the surest and happiest basis of power."

Here is the true distinction between the Liberal and the Tory party very fairly brought out. The former value self-government for its own sake,—value representative institutions as the only method by which any true self-government

of nations is possible at all;—the latter value them as a machinery which softens down and melts off the bare edges of an authoritative system into something which is more pleasant and acceptable,—in short, as a compromise which provides against sharp differences between the governors and the governed, and while leaving less power to the Government than an absolutist system, yet removes the friction and the risk which the exercise of such power involves.

It is obvious that these two principles are fundamentally and widely different. The Conservatives,—or those of them who accept Sir John Walsh's principle,—do not value self-government for its own sake. They regard the representative system as a happy medium between self-government and government by authority, as something which is to be defended, not for its own sake, but because it renders authority palatable to the people. Now, men who hold this view must clearly look on all constitutional concessions to the popular principle which are not *in demand* as a pure evil,—as so much waste of central power without any corresponding gain of popularity. There is, in their minds, no question of *justice* in the case. Representation is a device for getting Governments that will be gladly and readily obeyed. Any extension of the system which does fetter the hands of Government, and does not increase the gladness and willingness of popular obedience, is pure loss. And hence, in the eyes of Sir John Walsh, no course is more completely indefensible than to push on a Reform Bill now, when the country is quite satisfied with the representative system as it is.

We need scarcely say that we totally differ in principle from Sir John Walsh in his view of the Reform question. We believe that self-government, so far as it is capable and national, is a good in itself far surpassing any evil that can be set off against it in the waste of executive power. We hold that any class has a *right* to contribute to the governing power in *proportion to its capacity*, or intellectual and moral weight in the nation,—and that a mere favourable opportunity for extending that just influence to an intelligent and unrepresented class, like our artisans in manufacturing towns, cannot exist, than a time like the present when there is no popular cry for it. It is then a visible act of justice, not the mere concession of weakness to angry might. But we are willing to learn even from our opponents; and, when we see the Radical press openly advocating measures which would ultimately transfer the whole electoral power into the hands of the one class now almost excluded, we are not ashamed to take a lesson from Sir John Walsh. If national self-government is the thing we prize, and not a mere name,—it is obvious that the electoral power should be given in some proportion to *capacity*. No one would wish to see the Government in the hands of the incapable. No one would wish to see the electoral power wholly in the hands of the *least* capable. Yet this is the tendency of modern Radical politics; and the very sincerity of our regard for the principle of self-government which Sir J. Walsh undervalues, makes us conscious that he has some reason for misunderstanding and undervaluing it, when it appears to be interpreted by the extreme left of the Liberal party to mean a superstitious reverence for the equality of all Englishmen as electors, apart from any real equality in educated capacity for that office. The man who really respects the principles of self-government, say in his own family, will loosen the reins over his children exactly in proportion as he sees them gaining strength, intelligence, and principle; he will give more power to those who have formed judgments and full minds,—less to those who have only the germs of a good judgment and the elements of knowledge. He will feel that it is a farce to talk of respect for self-government, without careful consideration of the growing capacity to exercise it.

Sir John Walsh traces,—truly, we believe,—much of the growing disposition of statesmen to accept all their opinions from the public, instead of guiding the public by their own maturer convictions, to the kind of power which the lower order of electors are rapidly gaining in the House of Commons. It is the sign of a really competent constituency to elect representatives and not delegates,—to do only so much of the work of self-government as they are really competent to do,—to decide on the principles of their member, and then to *trust* him largely with a free decision on those matters of political detail which they have not either time or power to consider. But this is not the case with the lower class constituencies,—those constituencies which, like Marylebone, would be the type of all the borough constituencies, if the new Reform Bill is to enact a mere extension of the suffrage, and no provision for securing to the educated classes representatives of their own views. We shall have less and less of a deliberative House of Commons,—more and more of a body producing a mere reflex of the popular cry. In short, we shall have something more and more like the Congress of the United States.

Sir John Walsh affirms that such a degeneration has already resulted from the Reform Bill of 1832. That the House of Commons has become more sensitive to the varying airs of popular opinion since that time, we all know. Liberals regard it as a change essentially for the better, seeing that the old House of Commons was much too stiff and inaccessible even to the wisest movements among the people. But, undoubtedly, there is a very imminent danger of this going too far. We may have a House that shall represent, not the deliberate wisdom of the people, but the fickle impulses of the mob,—and, therefore, it is our duty to consider and reconsider the change, to which Sir John Walsh testifies, in the temper of our statesmen since 1832. It is a warning to all of us not to advise any measure which shall have the effect of concentrating all the elective power in the hands of a class less thoughtful and stable than the present electors. "Our public men in general," says Sir J. Walsh, "are, no doubt, "raised above the mere selfish motives of personal interest. "There is something nevertheless in the altered state of the "House of Commons which has strangely modified their course "of action in these respects. The exigencies of their position, "and the extreme difficulty of administering affairs through "the agency of a House of Commons so split up into sections, "and so acted on by external pressure, appear to force them "into constant inconsistencies and self-contradictions. Much "as I respect the memory of Sir Robert Peel, and fully as I "believe in the purity of his motives, I cannot altogether "acquit him of having set a dangerous example in this "respect. He seemed to have framed a peculiar code of "political morality for himself, and to have held that "urgent considerations of State expediency called upon a "Minister to sacrifice every tie of party, to renounce every "previous opinion, and to trample upon every declaration "or engagement implied or expressed that he had ever made. "It required all our knowledge of the man, all our conscious-"ness of the real sincerity of his belief that he was thus "promoting the best interests of his country, to enable us to "pardon such an exceptionable doctrine.....Be that as it may, "the practice has become very general, and public men con-"ceive themselves entitled to surrender every previous "opinion, to adopt totally different lines of policy from those "they have previously advocated, and to treat every question "in the manner best calculated to maintain or to win popular "support. This habit pervades equally the ranks of all "those who are candidates for Ministerial power." There is enough truth in these remarks to warn us seriously against any measure likely to lower the tone of that public opinion which elects Parliament. If statesmen are becoming even too subservient to it, it is still more needful that it should be itself pure and high in tone, thoughtful, and educated.

THE ITALIAN POLICY OF FRANCE SINCE THE PEACE OF VILLAFRANCA.

There are several distinct *lines* of political interest in the blue-book on Italian affairs on which we commented last week,—the history of the line of English, of French, of Austrian diplomacy, and the distinct line of Italian effort to overcome obstacles placed in the way of any consolidation of the Italian power. Not the least interesting or curious of these various lines of action, is the French. In England we have scarcely known whether to assume that the Emperor had throughout a deep scheme for Italy, and that the treaty of Villafranca, and all that has followed it, formed part of that scheme,—or whether, like other statesmen, he has been obliged to modify his plans according to the exigencies of the hour,—in fact, to pursue more or less a hand-to-mouth policy.

The study of Lord Cowley's despatches from Paris printed in this blue-book, and of the few despatches of Count

Walewski to the French Minister in London, seems to show very clearly that the Emperor has really changed his whole line of action;—that he did expect, and even endeavour, to carry out the provisions of the treaty of Villafranca,—that the French agents in Italy met with a check for which they were by no means prepared,—and that Sardinia, supported by England, at length succeeded in persuading the Emperor that his line of policy was impracticable and must be abandoned;—which resulted in the dismissal of Count Walewski at the beginning of the present year. It would be, however, a great mistake to suppose that the influence brought to bear upon Italy, in order to mould it to the French plan, was the Minister's only, and not also his master's. These despatches seem to us to prove fully that the Emperor himself would have preferred to leave Italy as he found it,—divided into petty atoms,—and that only on discovering that, in order to attain this result, either the French army must be employed against the free Italian States, or, at all events, Austria must be allowed to undo all that France had done,—did the Emperor definitely relinquish his hope of carrying out the plan sketched at Villafranca. He has, we think, been truer to Austria and less favourable to Italian independence than has been, at least of late, represented in the English Press.

The first notice of the Emperor's policy and wishes for the Duchies shows that he assumed as certain that the article in favour of the Dukes of Tuscany and Modena would be carried into effect. Lord Cowley writes as follows on the 13th July, two days after the signature of the Villafranca compact, after reciting the article "Tuscany "and Modena to be restored to their rightful Sovereigns":— "I asked Count Walewski whether any resolution had been "taken with regard to Parma. He replied that he had just "received a telegram from the Emperor, stating that the "disposal of Parma was left for the decision of a Congress; "but that His Majesty's impression agreed with that of "Count Walewski, that the Duchy must be restored to its "rightful Sovereign." Here, then, we have the first form of the wish and intentions of France as to the Duchies: all three are to revert to their old rulers,—*even Parma, concerning which no contract existed to fetter France in taking her own line.* And, at the same date, the view of the French Foreign Office as to the *means* of restoring the Dukes was, that "the Emperor was in no way bound to employ measures of "coercion, and hoped that they might not become neces- "sary." The French Government further espouses heartily the cause of the heir to the Duchy of Tuscany, on the abdication of his father,—and both in despatches and by special agents uses its whole influence with the Tuscan and Sardinian Government to procure the assent of the Tuscan people to his restoration. On the 10th August Count Walewski will "not conceal" from Lord Cowley "that the Imperial Government is ex- "erting the whole of its moral influence to induce the "Duchies to recall their Sovereigns, and, should that in- "fluence not prove successful, it would remain to be seen "what course should be taken. France had entered into "no engagements on this head." Again, a week later, Lord Cowley was told "the Emperor desired most sincerely the "return of the Dukes of Tuscany and Modena; for, in his "opinion, it was the only possible means of restoring order "in Central Italy. *The annexation of Tuscany to Sardinia "was an impossibility;* the transfer of the throne to the "Duchess of Parma would not be accepted by Her Royal "Highness; the erection of a kingdom of Etruria under "Prince Napoleon would not be agreed to by His Majesty, "who was determined to give no reason for the shadow of "a suspicion as to his designs in entering into the late war, "nor would the establishment of a Republic be more agree- "able to him." Even in November, when Count Walewski is quite willing to consider as a *possible* solution the annexation of the Duchies to Sardinia, "though he could not quite "admit that it would not be a disturbance of the balance of "power,"—the French Foreign Minister still maintains that the temper of the people in Central Italy has not been fairly ascertained. It is a curious indication of the different bias of the French and English agents, that Sir James Hudson, when enjoined to investigate thoroughly the asserted "terrorism" exercised by Sardinian influence in the Duchies and the Romagna, reports to Lord John Russell that he can find no evidence whatever of any such influence, and believes the imputation to be "purely gratuitous,"—while Count Walewski asserts "that there was not a French agent in "Central Italy who did not represent that a violent and "unscrupulous minority was overriding a timid majority." Finally, after the article in the *Moniteur* reproving the selfish conduct of the Tuscan and Modenese States, after the Emperor's letter to Victor Emanuel, and after the French veto on Prince Carignan's regency, in fact as late as 29th November the French Foreign Minister thus sketched out his intended recommendations to the Congress:—"He should state as "the opinion of France that the annexation of Tuscany and "Modena to Piedmont was not advisable, but that for stra- "getic reasons it was right that Piedmont should be placed "in possession of Parma and Piacenza. He should propose "to the Congress to recommend to the people of Tuscany to "receive back the hereditary Grand Duke as their Sovereign, "with such institutions and reforms as would ensure the "liberties of the Tuscan people. He should further ask the "Plenipotentiaries to examine whether some arrangement "might not be made which might induce the Duke of Modena "to cede his dominions to the Duchess of Parma."

After this, as we now know, when the Congress was finally postponed and some measure of a permanent character seemed necessary in Central Italy, the Emperor determined to give way to the well-pronounced feeling in Italy and the representations of England, and to advise that, after consulting the people of the Duchies afresh, the King of Sardinia might safely send troops into Central Italy and act as its recognised Monarch. But before this concession was made, Count Walewski was out of office.

With regard to Rome and the Romagna, the policy of the Emperor has been less materially modified. It seems that while at Turin, immediately after his Italian campaign, he wrote to the Pope strongly urging immediate reforms and the institution of a separate lay-administration in the Romagna as the only hope of saving his dominions. These reforms were pressed hard by the French Minister at Rome, but in vain. As the Pope spurned this advice, the Emperor seems to have been more and more driven into a policy of pique. The Pope asked in July whether France would object to his application to a Catholic Power for troops to establish his authority in the Legations? This Catholic Power seems to have been Spain. The French Minister replied that the French Government could not properly raise any objection, but that "they considered "the moment ill-chosen for having recourse to force." Since then, it seems that, disgusted with the Pope's obstinacy, the Emperor has cared far less to secure the Romagna to him than to secure the return of the Grand Duke to Tuscany. Count Walewski, in the same sketch of his intended policy at the Congress in which he declared his intention of advocating the restoration of the young Duke of Tuscany, assured Lord Cowley that if it should be thought practicable by the Congress to add the Romagna to the Sardinian dominions, France would be quite prepared to consider such a solution.

On the whole, it is evident that the French policy was at first eagerly bent to promote the restoration of the old fragmentary condition of Italy, and that it has yielded only reluctantly and inch by inch to the pressure of events.

THE PROPOSED STAMP DUTIES UPON COMMERCIAL TRANSACTIONS.

THE following correspondence has been forwarded to us for publication:—

29 Mincing lane, Feb. 17, 1860.

SIR,—As members of a committee appointed by an influential meeting of importers, exporters, and traders, held yesterday at the Commercial Sale Rooms, Mincing lane, for the purpose of considering some portions of the proposed measures affecting commerce, we beg respectfully to submit to you the following considerations, which express the feelings of the meeting with reference thereto.

With regard to resolution 11 of the proposed new tariff, we believe it would be impossible to apply practically the terms of this resolution, without subjecting various articles of import and export to severe and unequal pressure; while any attempt to obviate this objection would lead to obstructions and hindrances most injurious to trade.

With regard to resolution 12, we believe this resolution, instead of giving facilities to inland bonding, will greatly diminish or destroy the advantages for many years enjoyed by a large number of outports; and that in its application it will unfairly impose an additional and differential duty on all goods removed under bond, causing a vexatious interference with trade in the small ports, without securing any adequate advantage to the revenue.

With regard to resolution 13, we fully recognise the principle that for any special services rendered for the advantage of the owners of goods, in which the time of the Customs officers is taken up, a fair charge should be made, such as and not exceeding the present existing scale; but that accidents and misfortunes to property by sea, to which these charges more especially apply, should be the ground for heavy additional impost, seems to us most unreasonable and unjust.

As regards the proposed tax upon contracts and dock warrants, we beg to submit that it is a direct violation of the true policy of a commercial country to subject the needful operations of commerce to any restrictive regulations and penalties such as may arise from the neglect or non-observance of legal requirements; that a tax for revenue should be one that can be levied on the community generally, but the proposed tax on contract notes presses only upon the traders of the country.

That the stamps upon delivery orders, dock or wharf warrants will be found in many cases to be a serious charge upon the property they represent, even while in the hands of the original importers; but still more when, by the issue of sub-orders, the tax proposed may apply to an individual package.

Finally, we would respectfully submit that, on principle, we are unanimous in deprecating the multiplication of charges upon trade, being persuaded that simplicity in that respect is synonymous with saving of time to the merchant, of expense to the Customs, and of cost to the consumer.

We shall esteem it a favour to be allowed the honour of an interview; and we remain, Sir, your most obedient humble servants,

CHARLES MAGNIAC, firm of Matheson and Co.

J. M. CORRIE, firm of Corrie and Co.

The Right Hon. William Ewart Gladstone, M P., &c.

Downing street, Feb. 21.

Gentlemen,—I have the honour to acknowledge your letter of the 17th.

I must beg you not to construe the present communication as the answer of the Government to your representation. It is intended only to narrow any apparent ground of difference between us, and to suggest the course of proceeding most convenient with a view to the progress of public business.

Your letter refers to that portion only of the financial proposals of the Government which is intended to meet, by compensating charges upon trade and exchange in one form or other, a share of the loss anticipated from the approaching remissions of duty.

You comment more or less adversely upon the penny registration due, upon the charges for removals and operations in warehouse, upon the stamp proposed for dock warrants and for contract notes; and, besides, you observe that any tax meant for revenue should be imposed, not upon traders as a class, but upon the community.

I distinguish carefully between your particular and your more general objection. And, with respect to the latter, I respectively ask you to consider whether the financial scheme of the Government, viewed for one moment as a whole, is really open to the charge of relieving the community at the expense of traders as a class; and whether, on the contrary, the head and front of the attacks upon it be not this,—that it too greatly relieves trade, and therefore relieves traders also in a primary and special sense, and this by means of a tax to be imposed on the community.

It is with reluctance that Her Majesty's Government recommend to Parliament any new charges upon trade in any form. But the case is a very simple one. They found that in order to give the requisite breadth to their scheme, and secure some of its main ends, it was necessary to give a relief from present taxes amounting to nearly 4,000,000*l* for the year 1860-1, and to nearly 5,000,000*l* if we include the residue to take effect in 1861-2. They found that they might obtain this great relief, and along with it largely reduce establishments and patronage, and effect collaterally great administrative reforms, at a charge of something over 3,000,000*l* to the revenue of the coming year. They did not conceive that they could ask for more than about 2,100,000*l* from that revenue, with the present high scale of expenditure, even for the great purposes which they have had in view. It is, therefore, no wanton infliction which they suggest; but they are desirous to arrange, with your assistance and that of others who are well informed, a beneficial commutation. They rely with confidence on your willingness to venture something for the public good. They wish carefully to consider with you how to keep the pecuniary demand within bounds, and, above all, how to prevent creating new obstructions to the course of trade where their main object is wherever possible to destroy old ones.

I now pass to your comments upon details. Most or all of the resolutions on which you comment may require to be modified, but you will agree with me that definitive modification had better be reserved until it can express the final intentions of the Government.

Nor will you be surprised or offended when I tell you that, as the Minister most directly responsible, I am reluctant to ask my colleagues to give the subject their final consideration until I am myself able to pay a less divided attention to the details than will be possible until the House of Commons shall have dealt with the larger and more vital questions involved in the scheme for remission of duties.

I may, however, give you certain limited assurances, on which you may rely apart from anything that the necessarily technical language of the resolutions may appear to suggest.

With respect to the penny registration due, its basis is this:—We have, I trust, arrived at a stage in our legislation when the whole pressure of Customs duties will cease to be felt beyond a very narrow list of articles, and when the largest share, possibly four-fifths or more, of the entire import and export trade of the country, thus absolutely relieved, will continue to receive important services from Customs establishments that (including superannuations) cost the country above 1,000,000*l* a year. The registration due is intended, without affecting the operations of trade as duties do, to make a moderate contribution from trade itself towards this heavy charge. The requisite classification is of necessity, but inadequately, expressed in the resolution. I am satisfied that it will not be difficult, and that the measure is in principle generally admitted and approved.

The warehousing charges aim at the same end; and likewise at establishing a greater equality between certain classes of places, with regard to warehousing advantages, than now exists. I admit that many of them are too high. I further admit that it may be open to consideration whether, in respect to some of them, at least, and especially in regard to removals, a different form of proceeding may be preferable. A most respectable deputation from Liverpool has urged that all dealers in bonded goods should be required to take out an annual license; and the Government are desirous to obtain the opinion of the commercial world upon this suggested alternative.

With respect to dock warrants and to contract notes, I refer to what I have already said respecting the proper time for definitive explanation or improvement. I beg, however, to assure you that the former are not intended to be liable to those frequent repetitions of the charge imposed which has been apprehended; and, in regard to the latter, that it is not and never has been the intention of Government to ask for a tax even of 1d upon bills of parcels, or upon anything that essentially belongs to that class, inasmuch as the transactions to which they relate are already regulated, and, when they exceed 40*s*, taxed by law.

Should the faithful application of this pledge be found to diminish the estimated fruits of the stamp, it will, nevertheless, be redeemed.

After giving your obliging consideration to this letter, you may perhaps be enabled to draw into more specific forms any suggestions it may be agreeable to you to make. I shall be most ready to communicate with you, both in writing and personally, at the proper time; and it is for the general convenience, rather than that of the Government, if I venture to recommend that by mutual communication the classes best informed and most directly concerned should as far as possible represent to us on behalf of London and other places their collective wishes and opinions.

As this letter appertains wholly to matters of general interest, I make no apology for sending it at once for publication; and I have the honour to remain, gentlemen, with much respect, your very faithful servant,

W. E. GLADSTONE.

Agriculture.

THE AGRICULTURAL SOCIETY'S JOURNAL.

THE new number of the Journal of the Royal Agricultural Society contains papers of a more practical and directly agricultural character than has of late been usual. This is well, and we hope that the new *régime* about to be inaugurated in the Editorial conduct of the Journal will recognise the fact that the practice of husbandry is the end and object of all scientific disquisitions on agriculture. Amongst the papers to which we propose shortly to draw the attention of our readers, is that "On Cross Breeding," by Mr W. C. Spooner, who has scarcely dealt with the subject with that decision we should have expected, though he has supplied materials of great variety and value. Mr Glaisher offers some meteorological facts relating to the present inclement and protracted winter. Though in the latter part of October we had many days of unusually cold weather, the mean temperature of that month was 1¼ deg. in excess of the average temperature of October for 18 preceding years. On the contrary, November was 1½ deg. and December 3¼ deg. below the average temperature of the 18 years. The fall of rain for the last quarter of 1859 was 8¾ inches, exceeding the average by 1-6 inch. The rainfall of the year amounted to 25.9 inches, exceeding the average by half an inch; and this is the first year since 1854 that the fall of rain has not been short of the average. The mean temperature of the air at Greenwich for the three months ending November, constituting the three autumn months, was 49 deg. 9 min., being 0 deg. 7 min. below the average of 88 years.

Mr Robert Herbert has a paper on the "Statistics of Live Stock and Dead Meat for Consumption in the Metropolis" for the past year, of a similar character to that he gave in the January number of the Society's Journal of last year. In reference to the imports of foreign live stock, it appears that we are still receiving full average numbers of stock from abroad; for, though Holland, hitherto our chief source of foreign sheep supplies, has sent less, the deficiency has been made good by extensive arrivals of sheep from Germany—principally from Mecklenburg-Schwerin *via* Hamburg. The *weight* of meat, however, imported into this country during the past year has been considerably smaller than in many previous years. The Dutch flockmasters have improved their sheep by crossing them with some of our best breeds, so much so that some of their best sheep have been sold in our market at from 63*s* to 72*s* per head. The German sheep are Merinos; they arrive in wretched condition, and show very little improvement. They fetch from 15*s* to 18*s* each. The receipts of meat from Ireland have steadily increased. The old Irish breeds of both cattle and sheep are now nearly extinct, and Shorthorn cattle and Leicester and long-woolled sheep, selling at from 21*l* to 25*l*, and 50*s* to 63*s* respectively, now form the Irish contributions to the Metropolitan Market.

The Scotch cattle consist chiefly of Shorthorn and Scotch crosses, for the most part heifers, often weighing over 100 stone of 8 lbs, of

the primest quality, and at very early ages. These animals are frequently superior to the primest Scots, and are fattened earlier. All the metropolitan butchers admit that the earlier maturity of the cattle sent to London has given increased quantities of food, but that the early fattened sheep "carry less internal fat, and come lighter to the scale than formerly, taking bulk into consideration." Some foreign cattle have been grazed in this country, and, apart from great liability to disease, the result has been satisfactory. A Norfolk grazier purchased 200 Dutch beasts in London in the early part of last year for 13*l* each; these having been grazed on strong land and afterwards stall-fed, after the lapse of five months 100 of them were sold at 25*l* each, while 50 died from disease, and the remainder produced no profit. Notwithstanding the opinion of the butchers, there is no doubt that the dead weight of sheep in the Metropolitan Market has increased in quite as great a proportion as that of cattle. Fat, however, has increased more than lean. With the exception of Southdown, the weight of all the breeds of sheep have increased since 1839 about 8 lbs or 12 lbs per head, the greatest being on the Cotswolds and Irish sheep. Pigs have increased in weight during the same period as much as sheep, being about 12 lbs per carcass.

The animals sold in the Metropolitan Market by no means indicate the actual consumption of London; much stock is bought here for other large towns, as Birmingham, Manchester, Leeds, Brighton, and Bristol, as well as for the smaller towns within twenty miles of London. Besides these, there are many beasts and sheep sent up in a half-fat state, which are sold to be regrazed in Middlesex, Surrey, Essex, Bedfordshire, and Hertfordshire. An immense supply of meat comes to the dead markets. Thus, during the year ending 30th June, 1859, there were 22,000 carcasses of beef, 98,700 of mutton, 34,000 of lamb, 3,250 of veal, and 227,200 of pork sent to Newgate and Leadenhall markets. Most of these come from Scotland, Yorkshire, and the West of England. Twenty years ago the quanties of dead meat received were as follows:—Beef, 9,500; sheep, 70,000; lambs, 22,000; calves, 3,100; and pigs, 147,000 carcasses. After giving other statistical details, Mr Herbert concludes that "the prospects of graziers are favourable, notwithstanding foreign competition, and that prices, under the influence of great activity in trade and commerce, are likely to rule high during the whole of the present year." To this we may add, that the prospects opened to our stock breeders and feeders, by the complete emancipation of commerce proposed by Mr Gladstone, are singularly promising.

Literature.

A Visit to the Philippine Islands. By Sir John Bowring, LL.D., F.R.S. Smith, Elder, and Co., 65 Cornhill.

Two works of a very different description, have come out lately upon the Philippine Islands. Mr Ellis's, "From Hong-Kong to Manilla" was, as it were, the skirmishing of a body of light cavalry in advance of the heavy infantry of the late Governor of Hong-Kong's more weighty and effective charge. Mr Ellis, brisk, enterprising, and full of holiday enjoyment in a fresh country, rattles away agreeably enough over the surface of things; describes people and places in a few hasty but happy touches, does not trouble either his reader or himself about the past or future of the country he is visiting, and has produced a volume extremely readable, but not exactly valuable. The reverse may be said of the one now before us; it is valuable, and a trifle dull:—dull at least to the uncommercial part of the reading public, that does not chance to take a benevolent interest in the progress of distant countries in whose well-being England has no direct concern. Those readers, on the other hand, who may wish to gain some accurate and definite knowledge of a lovely and fertile region little known as yet to Englishmen; or to hear what may be reasonably expected as the future contribution of islands so rich in natural advantages of soil and situation to the commerce and wealth of the world,—will find all they require in its pages. It is substantial and elaborate, bearing every appearance of a conscientious exactness in details; and, from the peculiar facilities enjoyed by its writer, containing much that would not be easily accessible to an ordinary traveller.

Sir John Bowring, driven by ill-health to seek a change of climate and rest from his official labours, was received at Manilla with true Spanish courtesy and attention. The authorities, not content with fêting him in town and country, materially assisted him also in his investigations into the history of the first settlement and earlier condition of the colony, its revenues, taxes, commerce, and the approximate numbers and social state of its population. To these advantages his book owes much of its value as a standard work upon the Philippines; but it does occasionally suggest itself to us as we read, that these advantages have had their accompanying drawbacks,—that the dignity of the author's position has given a *soupçon* of official formality and a certain loftiness to his style. Like the Abyssinian Prince he tells us of, he prefers the broad marble stairs to those in every-day use; and, when he has found words high-sounding enough to raise him to the dignity of his subject, seems to exclaim, "Ah! this is as it should be." Why else does he speak continually of a "ferocious" soil; or, when he wishes to explain why Spain no longer sends out emigrants to her colonies, does he say that "the national spirit of the Iberian Peninsula has ceased to be ambulatory or adventurous"?

Having now briefly mentioned the comparatively trifling faults, and given some idea of the general character of this work, we will touch as briefly upon its chief points of interest, and let it speak for itself in a few extracts.

The Philippines, so named after Philip the Second, at that time Prince of Asturias, by Villalobos, the commander of the fourth expedition sent out by the Spanish Court to "conquer, pacify, and people" its new territory, was first discovered by Magellanes in 1521. Towards the close of the same century Manilla was founded; and a series of governors-general commenced with the appointment to that post of Don Miguel Lopes de Legaspi. Next to the governorship of Cuba, that of the Philippines is the most honourable foreign appointment under the Spanish Crown; perhaps it is for this reason that the average duration of the office in any one governor's hand has only been four years.

The historical sketch from which these data are taken occupies one of the opening chapters. Another is given to the causes of the writer's "Visit," to the incidents of his voyage, and to a description of Manilla and its neighbourhood. He speaks in high terms of the hospitality and kindly feeling of the people:—

Generally speaking, I found a kind and generous urbanity prevailing,—friendly intercourse, where that intercourse had been sought,—the lines of demarcation and separation between ranks and classes less marked and impassable than in most Oriental countries. I have seen at the same table Spaniard, Mestizo, and Indian—priest, civilian, and soldier. No doubt a common religion forms a common bond, but to him who has observed the alienations and repulsions of caste in many parts of the Eastern world—caste, the great social curse—the blending and free intercourse of man with man in the Philippines is a contrast well worth admiring.

An excursion into the interior fills the next chapter. Sir John Bowring's description of the varied and wild beauty of its wooded hills and rich vallies is attractive; so we think is the following account of a village reception:—

At last we reached a plain on the top of a mountain, when two grandly-adorned litters, with a great number of bearers, were waiting, and we were welcomed by a gathering of graceful young women, all on ponies, which they managed with admirable agility. They were clad in their gayest dresses. The Alcalde called them his Amazonas, and a pretty spokeswoman informed us in very fine Castilian that they were come to escort us to Lucban, which was about a league distant. The welcome was as novel as it was unexpected.....A band of music headed us; and the Indian houses which we passed bore the accustomed demonstrations of welcome. The roads had even a greater number of decorations—arches of ornamented bamboos, on both sides of the way, and firing of guns announcing our approach. The Amazonas wore bonnets adorned with ribands and flowers—while handkerchiefs of embroidered pina on their shoulders, and variously coloured skirts and gowns of native manufacture added to the picturesque effect.

The Indians, who, in a more or less civilised and subjected state, form the main bulk of the population, are not the native possessors of the soil. A black race of small stature, curly hair, great agility, and, for the most part, thoroughly barbarous in their mode of life, are generally believed to be the original inhabitants. These, driven backwards by the advance of the Indians ("who much resemble, though they are a great improvement on the Malayan race"), have retreated to the remoter and wilder parts of the various islands. "The Negritos," says Sir John, "are the savages of the Philippines, and are divided into many tribes, and, it is said, every grade between cannibalism and the civilisation of the Indian is to be found among them."....."They [the wilder tribes] are said to wear no garments, to build no houses, to dress no food. They wander in the forest, whose wild fruits they gather by day, and sleep among the branches of the trees by night. They have no form of government, no chief, no religious rites or usages. I saw one of the race, who was brought for sale as any wild animal might have been, to the Governor of Zamboango. He refused to purchase, but retained the lad."....."He was very dark coloured, almost black, his hair disposed to be woolly; he had neither the high cheeks nor the thick lips of the African Negro, but resembled many specimens I have seen of the Madagascar people."....."Among the characteristics of the wilder races is the separation of the toes, which enables them to pick up even minute objects, so if they let anything fall, they use foot or hand with equal facility; they will descend head downwards the rigging of a ship, holding on with their feat; the great toe is much more separated from the others than in the white races."

Commending this variety of the human race to the especial notice of those curious in "the origin of species," we will pass on to another feature in the population of these islands that seems to us worthy of remark. This is the prevalence of Chinese blood among the Indians. The Chinese Mestizo is even more common than the Spanish, and, though he is counted lower in the social scale, he forms the more active and valuable citizen. The proportion of men of pure Chinese blood is about a 400th part of the whole population. These can hardly be called citizens, since they rarely, if ever, settle permanently in any country. One, and probably the chief cause of this is, that no Chinese woman emigrates. The Spanish Government, that at last begins to recognise the value of Chinese labour among its inert people, and

has exchanged a system of persecution for one of simply exorbitant taxation, has lately endeavoured to overcome this difficulty, but without success. The Chinese are pre-eminently a trading people. They flourish in spite of every drawback, and have engrossed almost all the retail trade of the towns. The Indians chiefly confine themselves to agriculture on the simplest scale. Rice is their principal care: tobacco that of the Government. The Chinese markets receive the overplus of the former: Singapore and other East Indian Islands, Australia, China, Batavia, Great Britain, and the United States in a decreasing scale, that of the latter under the form of cigars. It is said that, great as is the amount exported, more than that quantity is consumed at home. Indigo is grown pretty freely, but its growers complain of a prejudice in Europe against Manilla indigo. The idle and careless ways of the Indians are probably a sufficient justification of this prejudice. Hemp forms one of their most important articles of commerce with the United States; out of 25,000 tons shipped from Manilla in 1858, more than two-thirds were sent thither. Sugar and coffee are exported to England, Australia, and California. The native manufactures are few and small, and yield little for exportation. Hats and mats of fibre curiously worked, and the beautiful cloth called pina, made from the pine-apple fibres, which, when embroidered, realises an almost fabulous price, and cotton goods from the native plant, comprise pretty nearly the whole list, with the one prominent exception of cigars. Cotton is easily grown, but its growers, contented with the home consumption, make no effort to widen their market. On this subject our author suggests new possibilities of advantage in the recent commercial treaties between us and China, and new sources of supply for our manufacturers. China "now clothes more than three hundred and fifty millions of her people from her own cotton-fields. The prices of China are so nearly on a level with those of India, that, though they allow an importation to the yearly value of two or three millions sterling in the Southern provinces of China, importations into the Northern are scarcely known. The quality, the modes of cultivation, of cleaning, of packing, are all susceptible of great improvements; their interests will make the Chinese teachable, and the Yang-tse-Kiang may be the channel for the solution of the cotton difficulty." "The capabilities of British India are great, and the elements of success are there; but the capabilities of China are vastly greater, and I believe that as in two or three years China was able to send raw silk to the value of ten millions sterling into the market, and immediately to make up for the absence of the European supply, so to China we may hereafter look for a boundless supply of raw cotton."

It is only within the last century that the Philippines have ceased to be a drain upon the resources of the mother country. During that period so great has been the increase in their population, and so great the impulse given to all branches of industry by a partial relaxation of the narrow and repressive policy of the Spanish rule, that, instead of requiring subsidies for the support of their own Government, they are able at the present day to remit to that of Spain nearly one-tenth of their gross revenues, amounting, in 1859, to 1,011,850 dollars; while the British trade (according to Mr Farren, the British consul at Manilla) with the Philippines exceeded in value, in 1855, that of Great Britain with several of the States of Europe, with any one State or port of Africa; was greater than the British trade with Mexico, Columbia, or Guatemala; and nearly ranked in the second-class division of the national trade with Asia—the total value of exports and imports approaching three millions sterling. The export of sugar to Great Britain and her colonies was, in 1854, 42,000 tons; that to Great Britain alone having gradually grown upon the exports of 1852, which reached 5,061 tons, to 27,254 tons, which exceed the exports hence to the whole world in 1852. The imports of British goods and manufactures, which were 427,020*l* in value in 1845, exceed 1,000,000*l* sterling in 1853.

The opening of three new ports, and the gradual following up of those sounder principles implied in such a step in a country full of absurd restrictions and injurious monopolies, will do much to develop the internal riches of these islands: the most permanent obstacle to their prosperity will lie in the inherent indolence and want of enterprise of its population, both Spanish and Indian. M. Mallat, enthusiastic in his admiration of islands whose natural fertility cannot easily be overrated, says that "Manilla is destined to be the great emporium for the Eastern and South-Eastern world," nay, "that Manilla might easily become the centre of the exports and imports of the entire globe." Sir John Bowring more wisely observes that "it must be contented with a less brilliant futurity. Certainly its commercial relations might be extended, and the Spanish Archipelago be much elevated in value and in influence; but, in the vast development of commercial relations in the Oriental world, the Philippines must be contented with a moderate, though a considerable, share of benefit even under the best administration, and the adoption of the wisest policy."

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The result of the debate on the treaty in the English Parliament is waited for here with the greatest anxiety. The rejection, however, of Mr Disraeli's motion on Monday night is considered to have materially increased the chances of its being adopted. The total refusal of it by the Parliament would produce grave consequences, not only in a commercial point of view, but in the political situation:—the exclusion of the clause relative to the export of coals in time of war, would also, as M. Michel Chevalier says in his letter published in the London newspapers, be regarded as an unfriendly act:—but I do not believe that with the exception of this clause the French Government would object to make any reasonable modifications in the treaty which might appear desirable to the Parliament, provided only they be asked for in a friendly way. In dealing with this treaty, what the French call *la forme* is of considerable importance.

In addition to the tariff reforms to be effected by the treaty with England, the French Government, you are aware, is under a promise to take off the duties on wool and cotton. The Minister of Commerce, in a report published within the last few days in the *Moniteur*, sets forth precisely what the Government proposes to do with regard to those duties; and from what he says it appears that the promise to remove them will only be partially kept, inasmuch as duties are to be imposed on the said articles, when brought into France by foreign vessels, and even by French vessels from certain places, or overland from certain countries. His proposition, in fact, is this:—

Wool and Cotton.—Imported by French vessels from countries out of Europe, or by land from countries contiguous to France, to be exempt; imported by French vessels from entrepots in Europe, or by land from countries not contiguous to France, to pay 3f the 100 kilogrammes*; imported by foreign vessels from anywhere, 5f the 100 kilogs.

What the reasons are for imposing the 3f duty for imports by French vessels from "entrepots" in Europe, or for making in the imports by land a distinction between those from countries contiguous to France and from non-contiguous countries, the Minister does not explain. As to the 5f duty, he says, of course, that it is to be established for the benefit of French shipping; and yet he admits that the mercantile navy is "powerless to co-operate in a large measure in the conveyance of wool from Australia"; and that "nine-tenths of the cotton" consumed in France are brought in by American ships, which, under a treaty of 1822, are assimilated to French vessels. Surely, then, for the wool which will be imported into France apart from that of Australia, and for the small quantity of cotton which the Americans do not bring, it was not worth while to impose the duty of 5f for the 100 kilogs. That duty will, besides, affect England more than any foreign country, inasmuch as her shipping business with France is greater than any other; and surely, after the concessions she has made in the treaty, some little consideration should be shown her.

The Minister tells us that he had originally intended to bring his new tariff on wool and cotton into operation on the 1st of July, in order to give time for the sale of stocks, but that "fears having been expressed that so long a delay would cause, if not a complete stoppage, at least a slackening of manufacturing operations," he proposes to fix the 15th April next. He further makes known that he thinks it fair to manufacturers to continue to allow them, for some time after that date, the existing drawback on the export of woollen and cotton yarns and woollen and cotton fabrics; and he proposes two months for the yarns and three months for the fabrics.

Reductions in the duties on dyeing substances are recommended by the Minister, as a necessary accompaniment to those on cotton and wool, and to modifications in the duties on chemical productions to be effected in virtue of the English treaty. The principle on which he advises the fixing of the duties on those substances is the same as on cotton and wool,—namely, exemption for imports by French vessels from countries out of Europe; a duty varying from 1f to 10f the 100 kilogs for imports by French vessels from European entrepots; and one of from 2f to 15f for all imports by foreign vessels. Subjoined is a detailed account of the Ministerial propositions:—

Pure Exotic Gums.—By French vessels, from Senegal and India, free; from elsewhere, 3f per 100 kilogs; by foreign vessels, 5f per 100 kilogs.

Sarsaparilla.—By French vessels, from out of Europe, free; from elsewhere, 2f per 100 kilogs; by foreign vessels, 4f per 100 kilogs.

Root Turmeric.—By French vessels, from out of Europe, free; from elsewhere, 2f per 100 kilogs; by foreign vessels, 4f per 100 kilogs.

* 100 kilogrammes are very nearly 2 (1.97) cwts; but it may be well to remark that "a ton" in freight does not mean 1,000 kilogs, but only 400. Hence, in the course of his report, the Minister speaks of the proposed duties on wool and cotton as 12f and 20f "the ton."

Quercitron.—By French vessels, from out of Europe, free; from elsewhere, 2f per 100 kilogs; by foreign vessels, 4f per 100 kilogs.

Shumac Leaves and Bark.—By French vessels and by land, free; by foreign vessels, 1f per 100 kilogs.

Tinctorial Lichens.—By French vessels, from out of Europe, free; from elsewhere, 1f per 100 kilogs; by foreign vessels, 3f per 100 kilogs.

Saffron.—By French vessels, free; by foreign vessels, 3f per 100 kilogs.

Cardamoms.—By French vessels, from out of Europe, free; from elsewhere, 1f per 100 kilogs; by foreign vessels, 3f per 100 kilogs.

Buckthorn Berries and Annatto Seeds.—By French vessels, from out of Europe, free; from elsewhere, 1f per 100 kilogs; by foreign vessels, 2f per 100 kilogs.

Potash.—By French vessels, from out of Europe, free; from elsewhere, 2f per 100 kilogs; by foreign vessels, 4f per 100 kilogs.

Nitrate of Potash and of Soda.—By French vessels, from out of Europe, free; from elsewhere, 2f per 100 kilogs; by foreign vessels, 4f per 100 kilogs.

Cochineal.—By French vessels, from out of Europe, free; from elsewhere, 10f per 100 kilogs; by foreign vessels, 15f per 100 kilogs.

Lac in tincture or lumps.—By French vessels, from out of Europe, free; from elsewhere, 5f per 100 kilogs; by foreign vessels, 10f per 100 kilogs.

Indigo.—By French vessels, from India and other countries where grown, free; from elsewhere, 10f per 100 kilogs; by foreign vessels, 15f per 100 kilogs.

Rough Pastel Paste.—Free.

Catechu.—By French vessels, from out of Europe, free; from elsewhere, 2f per 100 kilogs; by foreign vessels, 4f per 100 kilogs.

Prepared Annatto.—By French vessels, from out of Europe, free; from elsewhere, 2f per 100 kilogs; by foreign vessels, 4f per 100 kilogs.

Tannin Juices, liquid or concrete, from Gall Nuts or other vegetables.—By French vessels, free; by foreign vessels, 2f per 100 kilogs.

It is to be remarked that all the preceding propositions of the Minister will have to be submitted to the Council of State; and if approved of by it, to the Legislative Body. It may also be added, that the ministerial report makes known that an investigation is to be instituted previous to fixing the specific duties on chemical productions.

A copy of the report presented by the Directors of the Bank of France, in the recent annual meeting of the shareholders, has been kindly communicated to me. This important document gives an account of the operations of the Bank in 1859, and the following are the principal points in it taken in the order in which they are mentioned:—The rate of discount was raised on the 4th of May from 3 to 4 per cent., and on the 5th August was reduced to 3½. The total operations of the Bank and its branches were 5,213,900,00f, which were 952,600,000f more than in the preceding year. The amount of discounts in the course of the year was 4,947,500,000f, which was 386,500,000f more than in 1858. (Considering the perturbation caused in commercial operations by the war in Italy, these figures will occasion surprise.) The lowest amount to which the discounts fell was 430,197,300f on the 16th March, and the highest which they attained was 572,174,400f on the 31st May. The advances made on deposit of securities for *rente*, &c., were 225,754,900f; on deposit of railway shares and bonds, 452,526,000f; and of bonds of the Credit Foncier, 5,946,800f:—in all, 684,227,700f, or 84,695,100f more than in the preceding year. In addition to the advances made on railway shares and bonds to private persons, the Bank opened a credit of 250,000,000f to the Railway Companies, and disposed of that amount of debentures for them. The Government in the course of the year repaid 30,000,000f on account of the loan of 75,000,000f made by the Bank in 1852. The Bank, on the 31st December last, handed over to the Government 100,000,000f in return for a renewal of its privilege and the power of doubling its capital accorded by a law of 1857; and for those 100,000,000f it is in June next to receive 3 per cent. stock, and in the meantime the Government is to pay it 4 per cent. interest. (It is worthy of note that no mention was made of the receipt of this sum in the recent report on the financial situation by the Minister of Finance.) The minimum of the metallic reserve was 512,000,000f on the 10th May (in 1858 it was as low as 243,000,000f); and the maximum was 575,000,000f on the 24th Dec. At the beginning of the year the notes in circulation amounted to 748,294,000f, and at the end they were 705,882,100f; in the course of the year they rose as high (16th January) as 769,686,700f, and fell as low (17th June) as 662,157,000f. The "accounts current" were on the 16th June 341,900,000f, which was the maximum; and on the 22nd December 172,400,000f, which was the minimum. The number of securities deposited in the Bank for safety was 800,000, of the value of 9,614,000f;—they were 299,000 in number and 3,449,000f in value more than in 1858. The total number of such securities remaining in the Bank at the end of the year was 1,295,000, and the value of them was 794,000,000f. In the total operations of the Bank, the branches figure for 3,566,900,000f, which was 644,100,000f more than in 1858. The branches which did the most business were those of Marseilles, Lyons, Bordeaux, and Lille: that of Marseilles did business to the amount of 98,737,000f more than in 1858; that of Lyons, 66,546,000f more; that of Bordeaux, 55,562,000f more; but that of Lille was 5,542,000f less. The expenses of the Central Bank were 2,672,910f; those of the branches, 2,932,393f:—the clear profits of the former were 11,910,685f, and of the latter, 9,076,814f. In the profits of the Central establishment are, however, included 3,686,900f, the dividends on *rente* held by the Bank. The profits enabled a dividend for the year of 115f (53f for the first half-year, 62f the second) to be paid. The number of shares of the Bank is now 182,500.

Reports have for some time been current that, in order to make up for the deficiency in the revenue which the modifications of the duties in wool, cotton, coal, coffee, and other articles will occasion, at least for a time, the Government intended establishing an income tax; but the semi-official journals have been authorised to say that it has no such design. An income tax has more than once been proposed in the legislatures of this country, even by Governments themselves; but none was ever adopted, owing partly to the fact that incomes in France are too small to make the collection easy, and partly to the fact that from the repugnance the people would manifest to state correctly their incomes, a searching investigation into private affairs, which would soon become intolerable, would be necessary.

The monthly Customs returns, just published, show that the import duties in January last amounted to 13,611,237f, and that in the corresponding month of last year they were 12,588,247f, in the same month of 1858, 12,228,005f. But the increase for the present year, compared with last, is chiefly in sugar and cast iron; most other articles, and among them coffee, cotton, coal, wool, present a decline. In exports, machinery, millinery, refined sugar, and some other articles increased.

An improvement has, it will be seen from the following table, taken place on the Bourse. It is almost exclusively owing to the belief that the Treaty of Commerce is likely to be adopted by the Parliament, and that consequently no change of Ministry, and no change in English policy towards France, is to be apprehended.

It is greatly to be regretted that, at a moment when the French Government is undertaking a radical modification in its tariff, the administration of the Finance Department, which has the Customs in its control, should be in the hands of a minister, M. Magne by name, who is not only without any pretension to financial talent of a high order, but has always been hostile to tariff reform. It is surprising that the Emperor should not have had the sagacity to see that, for the accomplishment of the great measures he has undertaken, the co-operation of men of the very highest talent and who are heartily in favour of commercial reform is indispensably necessary. The present Minister of Commerce, M. Rouher, is possessed of considerable ability, sees the necessity of commercial changes, and contributed powerfully to the conclusion of the English treaty; but at this juncture even he is hardly the right man in the right place, inasmuch as there is one who knows more on the subject of tariff reform than any other man in France, who has made that reform the business of his life, who possesses unrivalled talents, and enjoys the advantage (a not unimportant consideration) of being as highly appreciated in England as he is in France. If the Emperor were wise, he would get rid of poor M. Magne, would remove M. Rouher to the Finance Department, and would place in the Ministry of Commerce the distinguished gentleman to whom I refer.

The following is the weeky account of the markets:—

Flour.—At *Paris*, yesterday, quotations were firm at the same rates as last week, namely, 53f to 55f for the sack of 159 kilogs for ordinary, and 56f to 58f for superior sorts. Four marks were firm at 57f for the current month; 57f 50c for March.

Wheat.—At *Paris*, yesterday, prices rose; choice being 32f to 32f 50c, and even 33f for the sack of 120 kilogs; other sorts, 31f to 31f 50c. The War Department accepted contracts for the supply of 10,000 quintals; a small portion at 26f 25c the 100 kilogs; the rest at 26f 50c. As regards the provincial markets, as many as 112 present a rise of from 8c to 1f 12c the hectolitre; and only 3 a fall of from 7f to, 25c: 13 remained unchanged.

COTTON.—At *Havre*, in the week ending Friday, 9,710 bales were sold and 3,702 imported. The closing prices remained unchanged, namely, 100f the 50 kilogs for low New Orleans, and 106f for very ordinary ditto This week, though a fair amount of business has been done, prices have declined; low New Orleans having been yesterday at 99f, very ordinary at 103f, and good low at 100f 50c.

COFFEE.—The sales of the week ending Friday, at *Havre*, were: 250 sacks Hayti, Port-au-Prince, 75f to 76f the 50 kilogs in bond; 60 sacks Gonaives, 77f; 730 sacks Port-au-Prince for delivery, 73f 50c; 400 expected, 75f to 75f 50c; 1,000 Gonaives expected, 75f 50c; 1,622 sacks, Rio, not washed, disposable, 72f to 75f; 400 ditto for delivery, 74f 50c; a small lot of Porto Rico at prices kept secret; 20 sacks Padang, 134f duty paid; 333 sacks Ceylon triage, 128f to 129f; 100 tons Malabar for delivery, 133f 50c. The arrivals were insignificant. This week business has been active: Port-au-Prince, at 73f 50c to 74f; Cape, 75f 50c; Gonaives, 76f; Rio, washed, 80f. At *Bordeanx*, last week, business was unimportant, and this week there has been none. At *Nantes*, last week, 90 sacks Java went at 137f 50c the 50 kilogs duty paid; 1,250 sacks Singapore, 130f to 130f 50c duty paid; 3,500 sacks Port-au-Prince, 73f 59c in bond. This week a small lot of Port-au-Priuce has been sold at 76f. At *Marseilles*, last week, between 600 and 700 sacks Rio went at 74f to 77f the 50 kilogs. in bond; 350 sacks Maracaibo, 75f in bond; 670 Guayra, 85f; 1,000 Hayti, Port-au-Prince, 75f.

SUGAR.—At *Havre*, in the week ending Friday, 1,600 hogsheads French West India disposable were sold at from 58f 50c to 59f 50c the 50 kilogs; 6,700 bales Reunion, 61f 50c duty paid. The arrivals exceeded 5,000 sacks. This week little business has been done: French West India, 53f 50c. At *Bordeaux*, last week, about 250 hogsheads French West Iodia went at 57f to 58f. Reunion not demanded, but quotations were nominally 60f to 60f 50c. 300 bales Mauritius at preceding quotations. This week some lots of Reunion have been sold, part of it by auction, at from 103f to 120f 50c the 100 kilogs duty paid. At *Nantes*, last week, 5,600 casks Rennion, of different sorts, went at from 59f to 60f 50c; 220 ditto "Murat," 66f; 7,788 sacks Mauritius, 61f 50c. No sales this week.

INDIGO.—There were neither sales nor arrivals at *Havre* in the week ending Friday. This week 10 cases Bengal have been sold at prices kept secret; 5 at 10f 76c the half-kilog duty paid. At *Bordeaux*, last week, 102 cases Madras, 8 Bengal, and 10 Kurpah were sold, but the prices are not stated. This week 34 cases Kurpah have been sold, but it is not said at what price.

HIDES.—At *Havre*, in the week ending Friday, the sales were: 676 Buenos Ayres dry at 142f 50c (for animals dead from epidemical disease) to 153f the 50 kilogs duty paid; 3,000 dry La Plata for delivery, 142f 50c to 152f 50c; 1,000 Buenos Ayres salted diaposable, 70f; 2,470 Pernambuco drysalted, 107f; 500 Chili drysalted (damp), 85f; 2,868 New York salted, 62f. Some lots of damaged of different sorts were also sold by auction. The arrivals exceeded 4,000. This week a fair amount of business has been done: Buenos Ayres dry, at 158f duty paid; Monte Video salted, at 87f 50c; New York, 62f to 63f; New Orleans, 61f; Rio Grande, 81f; Australia, 57f 50c; Algeria, 56f 50c.

WOOL.—At *Havre*, in the week ending Friday, 40 bales Buenos Ayres unwashed were sold at 1f 40c to 2f 66c the kilog in bond; and 296 bales sheepskins, Buenos Ayres unwashed, at 1f 2½c to 1f 62½c. The arrivals were insigoificant. This week Monte Video unwashed has been at 1f 90c to 2f 15c; lambskins unwashed, Buenos Ayres, 1f 25c; sheepskins, Buenos Ayres, 87½c.

TALLOW.—At *Havre*, last week, there were no sales and no arrivals part of the stock in hand was, however, sent to England. There bave been no sales this week. At *Paris*, yesterday, the 100 kilogs were 135f 50c, a rise on last week's quotations. At *Marseilles*, last week, prices remained nominally at 125f the 100 kilogs for all sorts.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg., 1st quality, was 92f to 93f the hectolitre; Montpelier, of 86 deg., 128f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 125f; beetroot, first quality, 96f.

Correspondence.

THE BUDGET AND THE PROPERTY TAX.

TO THE EDITOR OF THE ECONOMIST.

SIR,—A friend of free trade, and a supporter, as far as it lies in my power, of the existing Administration, I venture to trespass on your columns to state, not so much my own opinions, as what I hear around me,—views which have not been generally stated in the press.

Mr Gladstone is blamed for not redeeming a pledge as to the property tax. But what, in fact, was that pledge? *Not* that the income tax should now be discontinued, but that, when it expired, it should be *duly considered*. That is, that the question of direct and *in*-direct taxation, and the due *proportion* of each, should be examined and determined on. It was upon that understanding that (the tax being 5d) Mr Gladstone obtained, almost without opposition or debate, an additional 4d (to be paid at once) *for one year only*. For the purpose of his argument therefore on the 13th instant, the existing duty was 5d *only*, and *not*, as he put it, 9d; and the proposed increase now is really 5d (making 10d on the pound sterling), and not, as he put it, an increase of one penny only.

In round numbers, as I understand it, the Chancellor of the Exchequer now proposes to add one million sterling to the property tax for the "National Defences," and one million sterling to carry out the Treaty with France. For these two objects he may plead political necessity,—the one to guard against war, the other to promote peace.

But he *also* proposes to load the property of the country with, in round numbers, a *third* million to enable him to take off the paper duty, or, as it has been called, the "tax on knowledge."

Now, without entering on the vexed question of the merits or demerits of a paper duty, I desire to point out that this involves a new principle, or rather a new practice as to our national finances, or the mode of taxation. The usual reply, in such a case, of a Chancellor of the Exchequer has been: "Granted that the tax objectad to is an obnoxious or a bad one; but, *as I have no surplus*, I cannot now remove it." The answer *now* in substance is: "I admit I have no surplus, having really a large and unavoidable deficiency; but I will remit the duty on paper, *because I can add so much the more to the property tax!*"

But where is this to end?

Next year, an irresistible demand will be made for a remission of what may be called the war tax on tea and sugar. Will that, too, then be laid on the property tax?

Is it not time that the *limit* of direct taxation (if there is to be a limit) should be considered and fixed?

That there should be a combination of direct and indirect taxation, when life as well as property, wages as well as income, have to be protected, I will not presume to occupy your columns by contending. That may, I believe, be assumed, or taken for granted. The question of proportion, and the *limit* of direct taxation, are the only questions that remain for discussion.—Yours, &c.,

J. D.

Feb. 20, 1860.

COMMERCIAL AND MISCELLANEOUS NEWS.

The annexed commercial and monetary report is dated Calcutta, Jan. 10:—Produce Market—Business has been brought to a stand, in consequence of the late advance in freights. It is evident that produce must go down to cover this rise in freights. The only articles that are at all stirring are indigo and raw silk. Rice is higher, on account of large demands for the Mauritius and China. Oil seeds flat, with a declining tendency. Jute lower and out of favour. Saltpetre in less demand and slightly lower. Silk piece goods in no demand, unless at still lower prices. Shell-lac scarce and in demand at higher prices. All other articles dull and drooping. Import Market—In piece goods a fair business has been done at gradually advancing prices, and there is a general expectation of a better feeling in the market. Buyers show an inclination for new transactions at current prices, but sellers, for many very strong reasons, the principal of which are the very high prices at home and the considerably reduced exports from Liverpool, are holding out for higher prices. Yarns, after a slight improvement and advance in price, became very dull and lower. Little business is doing in this staple at present. Government Securities—There has been very little change in the value of any description of Government paper. The 5½ per Cents. and the 5 per Cents. were slightly improved by favourable advices from London, but, the buyers upon European account having withdrawn from the market, prices have again declined. The advices received to-day showing a decline in their value in London, we may look for lower rates, which will again bring buyers into the market. The amount held here is fast diminishing in amount, the native holders being generally free sellers; the Five-and-a-Half per Cents. may be quoted at 96, the Five per Cents. at 92, and the Four per Cents. nominal. Money Market—Money continues very easy, and is likely to continue so until trade recovers from the depression under which it now suffers; there has been some slight evidence lately of an improvement in both the export and import trade, but it is so slight that it has been hardly felt in either branches of trade. This want of employment for money in commercial operations has thrown a large amount into the coffers of Government, by which probably four-fifths of the 5½ per Cent. Loan of five crores has been filled up; with this, however, it is believed that an equal amount of the 5 per Cent. has been taken from the market for conversion.

Value of exports from New York to foreign ports for the month of January:—

	1858. dols	1859. dols	1860. dols
Domestic merchandise	4,208,306	3,762,182	5,299,142
Foreign merchandise, dutiable	290,308	232,337	399,317
— — free	191,125	119,489	324.003
Total merchandise	4,689,739	4,114,008	6,022,462
Specie	4,745,611	2,305,688	853,562
Total exports	9,435,350	6,419,696	6,876,024

Value of imports at New York from foreign ports for the month of January:—

	1858. dols	1859. dols	1860. dols
Dutiable goods	4,170,017	15,556,727	16,521,174
Free goods	1,716,682	2,618,220	2,262,638
Warehoused	1,909,448	1,201,707	2,744 411
Specie and bullion	309,572	71,308	238,050
Total imports	8,105,719	19,477,962	21,766,273
Withdrawals	4,504,591	2,088,270	2,964,024

Mr Snowden, Director of the Philadelphia Mint, writes:—"By the law, unless it is repealed, we are, until the 21st of Feb., 1861, bound to receive the Spanish and Mexican coins in question at their nominal value by tale, and pay out the new cent therefor. If the owner of such coins desire it, payment may be made by the Mint in silver coins; but, in such cases, they are received by weight, and not by tale. The amount of these coins purchased at the Mint and its branches, including the Assay Office, and paid for per ounce in silver coins, is upwards of 1,000,000 dols; about 500,000 dols have been received by tale in exchange for the new cent. It thus appears that the community have been relieved from this depreciated and mutilated foreign currency to the amount of one million and a half dollars by the operation of the law."

Annexed is a statement respecting the Lower Canadian Fisheries:—Extent of coast in Canada, where the cod, herring, mackerel, salmon, &c., fisheries are carried on, 800 miles; number of British fishing vessels frequenting our shores, from 500 to 600; number of American vessels frequenting our shores and the Gulf of St. Lawrence, from 300 to 450; number of boats belonging to Canada fishing on our shores, from 1,000 to 1,200; nearly 100 vessels belonging to Canada are occupied in the fisheries of Canada, either fishing or carrying the fish, 100; schooners from Gaspe carrying on the whale fishery in the Gulf of St Lawrence successfully, 10; quantity of codfish exported to foreign countries, 120,000

Quintals; quantity of codfish consumed in Canada, 30,000 quintals; quantity of pickled fish (herring and mackerel) exported, 60,000 barrels; quantity of ditto ditto consumed in Canada, 10,000 barrels; quantity of salmon taken, 3,600 barrels; value of fish taken on our shores by British and American fishermen, 1,200,000 dols. The action of the Canadian Government in respect to the fisheries of the St Lawrence, and the effect of the Reciprocity Treaty (which admits fish into the Union duty free), have given a great impetus to the mackerel fisheries in the Gulf and the Lower Provinces, and caused a corresponding falling off in the State of Massachusetts. The quantity of mackerel inspected in the latter State since 1854 is as follows:—1855, 211,952 barrels; 1856, 214,312 barrels; 1857, 185,388 barrels; 1858, 131,602 barrels; 1859, 99,818 barrels.

An account, pursuant to the Aot 8 and 9 Vict., cap. 38, of the amount of bank notes authorised by law to be issued by the several banks of issue in Scotland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 11th day of February, 1860:—

Name and Title.	Anthorised Circulation	Average Circulation.	Averaga Amount of Coin held.

COTTON.

NEW YORK, February 7.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with the closing prices, f.o.b., with freight in sterling at current exchange:—

		Sales.	Closing.		Middling.		Freights.		F.o.b.
New Orleans...	Feb. 4	45000	⅛c lower	...	11c	...	9-16d equal to		6.27d
Mobile	4	20000	unchanged	...	10⅝c	...	¼d	—	6.08d
Charleston	3	11000	⅛c lower	...	10⅝c	...	⅜d	—	5.86d
Savannah	3	9000	⅛c —	...	10¼c	...	⅜d	—	5.80d
New York	7	7000	⅛c —	...	Upl. 11¼c	...	3-16d	—	6.00d
Total		92000 bales					Average		6.00d

There is now an excess in receipts of 463,000 bales over last year, when the crop reached 3,851,000, and of 1,451,000 bales over 1857-8 (crop 3,114,000).

New York Market—This market remained very quiet during the first half of the week, and the America's news to hand on Friday brought business to a stand; prices became irregular, and holders anxious to sell. The North American's accounts, however, received the following day, altered the aspect of the Liverpool market, and there has since been an improved feeling and steady business doing at 11⅜c to 11½c for middling Upland. The week's sales reach 7,000 bales, of which 2,000 bales in transitu, on the basis of 11¼c for middling New Orleans, with 9-16d freight.

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years:—

	Receipts. Week's Receipts. bales	Since 1st Sept. bales	Exports for the Week. To Great Britain. bales	To France. bales	To other For. Pts. bales
1859-60	166000	2934000	81000	30000	27000
1858-59	132000	2471000	61000	5000	16000
1857-58	110000	1483000	40000	12000	11000
1856-57	72000	2015000	68000	9000	9000
1855-56	82000	1987000	50000	28000	13000
1854-55	105000	1350000	33000	8000	15000

	Exports Since First September. To Great Britain. bales	To France. bales	To other For. Pts. bales	Total. bales	Stock. bales
1859-60	1227000	333000	178000	1739000	1031000
1858-59	762000	303000	216000	1281000	920000
1857-58	524000	190000	126000	840000	612000
1856-57	541000	204000	143000	888000	786000
1855-56	763000	260000	190000	1213000	598000
1854-55	647000	145000	111000	903000	398000

Thus the receipts show an increase of 463,000 over those of last year, and an increase of 1,451,000 over 1857-58, and the exports exhibit the following results:—

	To G. Britain.	To France.	To other F.P.	Total.	Stock
Compared with last year	Inc. 465000	Inc. 30000	Dec. 38000	Inc. 458000	Inc. 111000
Compared with 1857-8	Inc. 703000	Inc. 143000	Inc. 52000	Inc. 899000	Inc. 410000

Southern Markets, by Telegraph—The absence of later foreign news restricted business at the South in the early part of last week, and in some markets prices became irregular. At New Orleans factors found it impossible to maintain the extreme rates of last week, and yielded ⅛c to encourage business. On Friday the America's news was received, which caused a further decline of ⅛c to ¼c, making the decline of the week about ⅜c, middling 10⅞c. At Mobile business was also quiet, and prices were barely maintained up to receipt of the America's news, since when buyers obtained ⅛c advantage, but with holders rather indifferent about selling. The rivers tributary to these markets are in fine boating order, and now delivering freely. The week's sales at Charleston are 11,000 bales, prices closing lower, while the Savannah market has been irregular, and the quotations show a decline of about ¼c on the week. On 4th and yesterday a large business was done at most of the Southern ports, a about ⅛c advance, based on the improvement at Liverpool.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by J. C. Ollerenshaw, Esq., of Manchester.*

NEW YORK, Feb. 11.—The market remains quiet at about previous prices. A moderate demand has prevailed, and the sales have been mostly confined to small lots for consumption and in transit, the offers from exporters being at prices below the views of holders, and transactions have accordingly been retarded. The sales for the three days are 5,200 bales, including 4,000 in transit, at 11 cents for barely middling New Orleans, with 9-16d freight. The arrivals have been from Bermuda, 103 bales; New Orleans, 15; Georgia, 3,161; South Carolina, 607; North Carolina, 182; Virginia, 163; total, 4,231 bales. Total import since 1st inst., 14, 722 bales. Exports from 1st to 7th February, 5,377 bales, against 1,380 in 1859.

MARKETS IN THE MANUFACTURING DISTRICTS.

Notwithstanding that only a moderate business has been transacted in manufactured goods, both for home use and export, compared with some previous weeks, prices, generally, have continued firm. The stocks on hand are still limited, and the prospect of trade is considered favourable. Labour is in demand, and most of the mills are running full time. The iron trade is healthy, though not to say brisk, and there is a steady business doing in coals.

MANCHESTER, Feb. 23.—This market has been quiet generally, but individually a few operators have bought largely. With a steady moderate business in yarns, there have been considerable operations in shirtings for delivery to the end of April. 8 lb 4 oz qualities for China, and 7 lb for India, have brought extreme prices. Private telegrams to 2nd inst. from Calcutta were received to-day, though their contents, except as reporting a rise in freights, have not been published. However, they cannot have been regarded as unfavourable, a better feeling having sprung up from their receipt. There has been no other point of note for the week.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

LEEDS.—The general tone of the trade is healthy, though quiet, and the prospects for the spring months are deemed to be satisfactory. Wool is firm in price, but not much is doing locally, manufacturers being disposed to see what will be the range at the approaching series of colonial wool sales in the metropolis.——ROCHDALE.—More business has been done in flannels and wool; prices of both may be quoted as steady, but there is no great disposition either to buy or sell. Manufacturers continue well employed.——BRADFORD.—Wool—There have been more lookers during the past week, but the actual sales made are meagre in the extreme. Prices asked are about the same as last week, but more anxiety is evinced by the staplers to realise before the droughty weather begins to take effect. In noils and shorts the demand keeps very steady, and prices are without change. Yarns—We have no improvement, either in the export or home demand. Prices are less firm from week to week. Some spinners are curtailing their production, rather than spin yarns into stock at the present prices of wool. Pieces—In the piece market there is no increased business to-day. Merchants are indifferent about buying plain goods, whilst for fancy styles the demand is quite active.——HALIFAX.—There is no change of importance to notice in the state of either the woollen, the worsted, the carpet, or the cotton trade of this district.——HUDDERSFIELD.—Prices are about the same, with rather a less tendency to an advance than was observable not many weeks since.——LEICESTER.—The hosiers engaged in the home or country trade have a steady demand, which, although not brisk, takes off goods as produced. The foreign trade is dull, though not more so than is usually the case at this season of the year.——DUNDEE.—Our market, almost generally, is in a healthy state, and prices are well supported.——BELFAST.—An increased amount of business, both for home consumption and export, has been transacted in yarns. Sales generally have been more than equal to production; stocks consequently show symptoms of decrease, especially in tows and good line warps. Prices remain firm. Linens continue steady.——BIRMINGHAM.—A further improvement has taken place in trade. The country orders are again coming in freely. The season trades all display a good deal of activity; the manufacturers' order-books are filled; in no important branch of trade is there the slightest evidence of slackness, and in the town, as well as the adjoining district, labour is fully employed.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Feb. 7.—Flour receipts, 523 brls; sales, 12,200 brls. State and Western more active and 50c better, with a fair speculative demand. Southern more active: mixed to good, 8.40 dols to 5.70 dols. Canada steady. Wheat firmer and more doing: sales, 27,000 bushels. Corn and oats quiet.

NEW YORK, Feb. 11.—FLOUR AND MEAL.—Immediately subsequent to the date of our previous issue a moderately active speculative demand

sprung up for State and Western flour, which, combined with a fair inquiry from the local and Eastern trade, led to an advance of 10 to 15 cents per bbl on all kinds. The market has been buoyant, and the advanced prices continue to be sustained, though the demand from speculators has partially abated, partly owing to the firmness of holders at our advanced quotations. Export from 1st to 7th February: wheat flour, 11,058 bbls, against 9,117 in 1859.

GRAIN.—A more active demand has prevailed for wheat from the local millers, and the market has been characterised by more buoyancy during the three days than for some considerable time previously, while holders have manifested increased firmness for all descriptions. Corn continues dull, and the market much depressed; transactions have been small. Export from 1st to 7th February: wheat, 29,248 bushels; corn, 12,170 bushels, against 1,034 in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Both here and in the leading provincial markets only moderate supplies of English wheat, but in somewhat improved condition, have appeared this week. For all kinds the demand has ruled steady, at prices fully equal to those previously current. The transactions in foreign wheat,—the imports of which have been on a very limited scale,—have not increased; nevertheless, importers have continued very firm in their demands, and late rates have been well supported. The barley trade has ruled active, and the inquiry for sowing qualities has increased to some extent, and for which very high currencies have been paid. In malt, the transactions have continued limited, but without producing any change in value. Owing to limited importations, large quantities of oats have sold ex-granary, at very full rates. Both beans and peas have commanded extreme quotations, and the flour trade has ruled somewhat healthy, although most of the large bakers continue well in stock.

Our advices from most of the continental markets are to the effect that wheat has ruled inactive, owing to the want of orders from England, and that prices have been with difficulty supported. All spring corn, however, appears to have changed hands freely at extreme rates. With very few exceptions, the stocks of produce on the Continent appear to be large. In the United States the markets have continued somewhat heavy. The shipments of wheat, barley, and maize are still limited, although ample supplies are coming forward for the time of year.

In Scotland, wheat has commanded more attention, but without leading to any quotable change in price. Barley and oats, too, have realised extreme currencies, and other articles are firm. The shipments to the South continue liberal.

Most of the Irish markets have been far from active for wheat; nevertheless, the quotations have been well supported. In the value of spring corn no change has taken place. The speculative purchases of grain, either for home use or export, have continued limited.

Only a limited supply of English wheat was on sale here to-day. For all kinds the demand ruled steady at full prices. Foreign wheat was firm at late quotations. All spring corn changed hands steadily at extreme rates. The flour trade was steady.

Mr Edward Rainford states that 15 vessels have arrived off coast laden with grain since the 16th inst. In floating cargoes, a fair business appears to have been transacted, at full prices.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the Gazette.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 22nd day of February, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,928,190	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,453,190
		Silver Bullion	...
	28,928,190		28,928,190

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,171,190
Rest	3,445,062	Other Securities	20,940,989
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	7,277,548	Notes	8,362,800
Other Deposits	14,191,528	Gold and Silver Coin	699,634
Seven Day and other Bills	707,475		
	40,174,613		40,174,613

Dated the 23rd February, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,272,865	Securities	31,034,179
Public Deposits	7,277,548	Coin and Bullion	15,152,824
Private Deposits	14,191,528		
	42,741,941		46,187,003

The balance of Assets above Liabilities being 3,445,062*l*, as stated in the above account under the head Rest.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A decrease of Circulation of	£451,235
An increase of Public Deposits of	447,292
A decrease of Other Deposits of	98,228
No change in the amount of Government Securities.	
A decrease of Other Securities of	143,150
An increase of Bullion of	47,537
An increase of Rest of	6,558
An increase of Reserve of	473,292

The government deposits having increased, whilst the private securities have somewhat decreased, there is an addition of nearly half a million to the reserve. The coin and bullion likewise show a trifling increase.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,000,213	£ 19,341,515	£ 20,330,623	£ 21,068,273	£ 21,272,865

— Hamburg (3months)	13 13	13 7½ 8	13 4¾ 5	13 6 6¼	13 5 5¼

At the corresponding period of the year 1850, Mr Disraeli had just been defeated, by a majority of 21, in a full House, upon his proposal for a Committee charged to revise the Poor Laws, with a view to the special relief of the agricultural classes. In France, attention was directed to preparations for the general elections on the 10th of March. In anticipation of the celebration of the anniversary of the revolution of February, the Prince President was pouring troops into Paris. The French 3 per Cents. were quoted 58, or 10 per cent. lower than now. The blockade of Greece by the English fleet continued.

In 1857, the progress of the mutiny in India was watched with great anxiety. The Indian Government had just opened a new 5 per Cent. local loan for 3,000,000*l*. The money market at home was disturbed by the heavy shipments of silver to India.

In 1858, the public mind was troubled by one of the periodical fits of distrust of France. The relations between the British and French Governments were by no means cordial. The desire for good investments, however, at a time when the value of money was as low as 3 per cent., caused the funds to be quoted 2 per cent. higher than now.

In 1859, the Bank's resources had accumulated to an extraordinary point, the reserve having reached fourteen millions and the bullion nearly twenty millions. The best bills were taken in Lombard street at 2 per cent. The balance of 65 per cent. was about to fall due on the second series of 1,380,000*l* of Messrs Dent, Palmer, and Co.'s Turkish loan of 5,000,000*l*. This loan had fallen to 5 dis., the Chilian loan to 3 dis., and the Austrian to 1½ dis. The stock markets were in an agitated and uncertain state, owing to the progress of the quarrel between France and Austria A little faith was placed in Lord Cowley's mission of mediation to Vienna. Much satisfaction was expressed in commercial circles at the announcement that Lord Palmerston had determined to bring on a debate on foreign politics, with a view to extract some information from the Government.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, an excess of 61,200*l*; in 1857, a deficiency of 8,461,288*l*; in 1858, a deficiency of 1,667,326*l*; and in 1859, a deficiency of 1,639,586*l*. In 1860, the deficiency is 6,749,461*l*.

The money market is easy. The supply is abundant, and, although caution is still evinced as regards distant engagements, no difficulty is experienced in getting the best bills discounted at 3¾ per cent., or ¼ below the Bank *minimum*. Little business has consequently been carried to the Bank. It is expected that the Directors will next Thursday formally intimate their readiness to make the usual quarterly advances during the shutting of the transfer books; and as the bill-brokers are admitted to these facilities equally with the general public, it is probable that the market will remain easy for some weeks.

In the Stock Exchange there is also abundance of money, owing to the investments by the public in the English funds and railway stocks. 1½ to 2 per cent. are the highest terms obtainable for short loans on English Government securities.

The anticipation expressed in these columns that the imports of specie and bullion would be very small for some time to come is fully realised. The arrivals this week have again been trifling, comprising only 15,000*l* from the United States, and 4,000*l* from the Peninsula. Meanwhile, the efficacy of the measures of restriction lately adopted by the Bank of England is shown in the maintenance of the late improvement in the Continental exchanges, and in the consequent cessation of the drain of gold, notwithstanding the continued demand for specie for India. The shipments of gold to the latter quarter have diminished, but those of silver are continued upon a considerable though not pressing scale. The effect upon our money market is the same, whether the remittances be made in gold or silver, since the required supplies of the latter metal must be procured on the Continent. The recent recovery in the price of the Indian rupee loans in this market will encourage further imports of those securities, and tend to keep up the flow of bullion to the East.

There have been no operations in bullion at the Bank since the date of the return given above.

Of the 410,000*l* in Australian gold known to be at sea, about 216,000*l* is fully due, and the rest ought to arrive in a week or two. The Commodore Perry, with 58,500*l*, has now been at sea 100 days; the Roxburgh Castle, with 89,300*l*, 94 days; the Cleadon, with 68,500*l*, 86 days; the Saldanha, with 65,300*l*, 79 days; the Essex, with 57,200*ll*, 78 days; and the Indemnity, with 71,900*l*, 70 days.

It is believed that the steamer Delta, on the 27th instant, will take about 300,000*l* in gold and silver for Bombay. The specie remittances to India and China since the 1st of January have been as follows:—

	£
Jan. 4, per Ceylon	276,176
Jan. 12, per Delta	436,002
Jan. 20, per China	547,609
Jan, 27, per Euxine	455,900
Feb. 4, per Indus	258,619
Feb. 12, per Pera	273,780
Total	£2,248,086

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—We are still without any arrivals of gold from Australia, but some of the vessels are hourly looked for; the passages of the seven ships now on the way varying from 69 to 102 days. The demand for

export is limited, and the quantity taken from the Bank during the past week is but small. The Parana brought 25,000*l* in gold from the West Indies, and this has been sent away.

Silver.—The bar silver ex Parana, from the West Indies, has been sold at 62d and 62½d per oz standard; we quote the price this day at 62½d and rather firm. The Parana brought 76,000*l*, in addition to which some large amounts have been imported from the Continent. The Tamar takes 5,920*l* in silver to the West Indies.

Mexican Dollars.—We quote the price of dollars as 62¾d per oz; there are, however, but few on the market. The Teutonia, from New York, brought 3,000*l*, and the Walter Lord brought a small lot from Mexico.

Exchange on India for banks' drafts is a little dearer, 60 days' sight bills being 2s 0¾d on Bombay and Calcutta; Madras, 2s to 2s 0⅛d; documented bills, 1s 11⅞d per rupee.

India Government Loan Notes have experienced a considerable rise since our last, and a large amount of paper has been sold at rates gradually rising from 97 to 98¼ for 5 per Cents., and from 103 to 104¼ for 5½ per Cents. This evening rates are a shade weaker, and our latest quotations are 97⅞ to 98⅛ for 5 per Cents., and 103⅞ to 104⅛ for 5½ per Cents.

There has been no alteration of importance in the foreign exchanges. This afternoon the tendency was not very favourable.

A telegram from Constantinople, published this morning, announces a fall in the exchange on London from 160 to 113. It is believed that the latter price should be 130. It is satisfactory to find that the efforts which have been made for the improvement of the Turkish currency have not been wholly ineffectual.

On Wednesday morning appeared the expected notification fixing the interest upon the renewal of the March Exchequer bills at the same rate as that now borne by them, viz., 1½d per cent. per day, or 2*l* 5s 7d per cent. per annum. The old bills will be received for renewal until the 5th of March, and the new ones will be ready for delivery on the 13th. Exchequer bills have advanced 1s since the announcement, being now quoted 25s to 28s prem.

The South-Eastern Railway Company have announced their dividend at the rate of 6 per cent. per annum (making 5 per cent. for the whole year 1859), against 5 per cent. per annum for the corresponding six months of the previous year. A balance of 8,585*l* remains to be carried forward. The company's stock has experienced an extraordinary rise for several weeks past, owing to the highly satisfactory progress of the traffic, combined with the expectation of this high dividend, the actual announcement of which has not been followed by any further advance.

At the half-yearly meeting of the Southampton Dock Company, held on Wednesday, a dividend of 2 per cent. for the half-year, as recommended by the Directors, was agreed to.

The ordinary meeting of the proprietors of the Chartered Bank of India, Australia, and China was held yesterday, *pro formâ*, to allow an adjournment to the 29th of March, the accounts from abroad to the 31st of December not having come to hand. A resolution to this effect was passed. The Chairman stated that the affairs of the bank were in a very prosperous condition.

The plan for the establishment of a "Great Northern Palace Company, Limited," with the view to the formation of a "Palace for the People" at Muswell Hill, upon the model of the magnificent erection at Sydenham, has been announced this week. The capital is not to exceed 400,000*l* in shares, and 200,000*l* in debentures. The estate consists of 450 acres, of which 150 acres are to be appropriated to the palace and grounds, whilst 270 are to be set apart for the erection of villas. Arrangements have been made to obtain every facility from the Great Northern (three of whose directors have seats at the board) and other railways, the promoters being sanguine as to the advantages which will accrue from the accessibility of the site.

Another new project is the Buenos Ayres and San Fernando Railway Company, Limited. The line will run from Buenos Ayres fifteen miles into the interior. Upon the capital of 150,000*l* the Government guarantee 7 per cent. per annum. Free grants of land and total exemption from taxes are also amongst the features of the concession. ¼ prem. was bid this afternoon in the Stock Exchange for the shares.

The latest prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 2½ to 2⅝ prem.; Universal Marine Insurance, ½ to ⅝ prem.; London and Provincial Marine Insurance, ¼ to ⅜ prem.; San Paulo (Brazilian) Railway, 5-16 to 3-16 dis.; Bank of Turkey, ⅞ to ¾ dis.; and City of London Brewery Preference shares, ⅝ to ⅞ prem.

The scrip of the new Canadian 5 per Cent. loan is quoted 2 to 2¼ prem., and the paid-up bonds, 100⅜ to ⅝.

The Financial Agents of Canada remind the holders of Canada bonds that the conversion of those securities into the new Consolidated 5 per Cent. stock is still in progress.

The Indian rupee paper has risen ½ to ⅝ per cent. since last week, the 5 per Cent. being quoted 98 to ¼, and the 5½ per Cent., 103¾ to 104. These prices are greatly above those current in India. The completion of the deficient links in the Anglo-Indian telegraph would soon obviate the discrepancy.

At Paris, to-day (Friday), the 3 per Cent. Rentes closed at 67.95 for money, and 67.90 for the account, being ¼ per cent. lower than yesterday, but marking ¼ per cent. higher than on last Friday. Throughout the week the Bourse has derived strength from the favourable reception accorded to the Budget and the French Treaty by the House of Commons. The reduction to-day is believed to have been occasioned by the news of this morning's decline in Consols, combined with the departure of the English channel fleet for Lisbon.

During the last two or three days there has been a recovery on the Vienna Bourse.

A rise has taken place in the English funds, owing to the ease of the money market, the apparent stability of the Cabinet, and the scanty supply of stock afloat. At one period Consols reached 95¼. This morning a relapse to 94⅞ occurred, in consequence of the departure of the Channel fleet, which was regarded as a demonstration against Spain; but in the afternoon the price recovered to 95 for money, and 95 to ⅛ for the 8th of March. These quotations are ⅜ per cent. above those of last Friday. The market remains firm in character, but speculative buoyancy is repressed by the still uncertain position of politics on the Continent. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The buoyancy in the market for British railway stocks, to which attention has been called for some months past, continues. The increase in the traffic is maintained; and the dividends are very satisfactory. The public, accordingly, show a strong desire to invest, whilst holders are loth to sell. The consequence is an almost general scarcity of stock in the market. The rise established this week amounts to 1½ per cent. in Great Northern stock, ¾ per cent. in Midland, and ½ per cent. in Great Western, Lancashire and Yorkshire, London and North-Western, and South-Eastern. On the other hand, Caledonian has declined ¾ per cent., and London and South-Western ½ per cent. Late this afternoon, Midland stock rose to 109⅜ to ⅝, being scare. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day;—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.12½ per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is rather more than 1-10th per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422 per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 1-10th per cent. dearer in London than in Hamburg.

The Commercial Times.

REGISTRATION OF LETTERS AND PACKETS OF PRINTED PAPERS FOR NEW ZEALAND.—On the 1st March next and thenceforward a letter or a packet of printed papers addressed to New Zealand may be registered, on the application of the person posting it, provided the postage, together with a registration fee of sixpence, be paid in advance.

LETTERS FOR THE BRITISH FORCES SERVING IN CHINA.—The French Government having offered to reduce the transit charge upon letters addressed to officers, soldiers, and seamen of the British Forces in China, when sent via Marseilles, to the same amount that is levied in France upon letters addressed to French soldiers and seamen serving in China, which is 2d for a letter not exceeding a quarter of an ounce in weight, and 4d for a letter above a quarter and not exceeding half an ounce, the following will be the combined British and French postage, to be paid in advance, during the continuance of hostilities with China, upon such correspondence, viz.:—For a letter, addressed to a commissioned or warrant officer of the Army or Navy, not exceeding a quarter of an ounce, 8d; above a quarter of an ounce, and not exceeding half an ounce 10d. For a letter addressed to a non-commissioned officer, or private soldier or seaman, not exceeding a quarter of an ounce, 3d; above a quarter, and not exceeding half an ounce, 5d. The privilege enjoyed by private soldiers and seamen of sending and receiving their letters by British packet for a postage of one penny, will, in addition, continue in full force. Letters addressed to non commissioned officers, soldiers, or seamen serving in China, will be forwarded through France only when specially addressed "via Marseilles." Letters addressed to commissioned or warrant officers will be forwarded as a rule via Marseilles, when not directed to be sent "via Southampton."

Imports of the week ..... 52,570 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The supply of English wheat on offer at Mark lane, this morning, was very moderate. For most kinds the demand ruled steady, and Monday's prices were well supported. In foreign wheat, the transactions were on a limited scale; nevertheless, extreme quotations were realised by holders. All spring corn moved off steadily at last week's currency, and flour was firm in price. The imports from abroad are only 2,100 quarters of barley, 1,340 barrels and 350 sacks of flour.

At Liverpool, to-day, produce generally was steady at full prices.

The demand in the Liverpool cotton market during the week has been rather less animated than in the two or three previous weeks. The total sales amount to 51,000 bales, including 41,500 bales to the trade, 2,500 bales on speculation, and 7,000 bales for export. The quotations are the same as on Friday last. To-day the market closes quiet; sales, 6,000 bales, without change. With the increased pressure of the money market, there has been an increased desire on the part of holders to realise their stocks, without, however, any disposition being evinced to force sales; prices have consequently been pretty well maintained.

Messrs Briggs and Co., of Alexandria, writing on the 11th inst., observe that only limited supplies of cotton were coming forward, and that sales progressed briskly on higher terms.

The tea market has been much less active, and, in some instances, the quotations have had a drooping tendency. The public sales have gone off heavily, on easier terms.

We have received the following in reference to tea and silk from Hong Kong. The report is dated Dec. 30:—

Canton Silk—No transactions, and prices remain the same. Tea—Very little has been done during the fortnight owing to the firmness of the teaman, and the unwillingness on the part of foreigners to operate at the present high rates. The arrivals have been two chops. Total settlements to date are 185 chops; stock, 38 chops. Settlements for the fortnight are as follows:—Congou, three chops (one for the colonies), blackish leaf, at 25 taels to 26½ taels. Scented orange pekoe, 4,000 boxes—common mixed leaf, 19.5 taels to 23 taels; fair to medium, 24 taels to 26 taels; fine, 29 taels to 30½ taels; finest, none. Scented caper, 9,000 boxes, principally of low quality—low and apurious, 15 taels to 17 taels; fair to medium, 20 taels to 22 taels. Canton gunpowder—2,000 boxes, at 16 taels to 18 taels. Foo-chow advices are to the 23rd inst. During the fortnight there has been less activity in the tea market, the news from England to the 10th of October failing to induce speculative purchases. Prices remain much the same as last quoted. Oolongs have been purchased to a moderate extent at full rates for America. In Souchong and scented teas a small business has been done at fully former prices. Sales are as follows:—Congou—12,000 chests, at 10.5 taels for low ordinary, to 23.5 taels for fair medium; partly for Australia. Souchong—240 chests, fair, at 22 taels. Oolong—7,560 half-chests, at 15 taels for very common, to 22 taels for good congou, for America. Scented teas—1,800 boxes, at 16 taels for dusty leaf, and 24 taels for medium kinds. Stock—Congou, 37,000 chests, low ordinary to middling; Souchong, 150 chests; Oolong 4,000 half-chests common and Foo-chow packed to good cargo; scented teas, 3,000 boxes fair quality. Total arrivals and sales are:—Arrivals, congou, 326,000 chests, against 149,000 chests last year; Oolong, 188,260 half-chests, against 127,600 half-chests last year. Sales—Congou, 265,402 chests, against 132,800 chests last year; Oolong, 165,100 half-chests, against 119,600 half-chests last year. Quotations are—Congou, low and ordinary to clean common, 10.5 taels to 15.5 taels; good common to fair medium, 16.5 taels to 23.5 taels; Souchong, fair, 22 taels; Oolong, very common cargo and Foo-chow packed, 16 taels 17.5 taels; fair to good cargo, 18.5 taels to 20 taels; good cargo, 22 taels. Shanghai dates are to the 21st inst. Silk—3,000 bales settled during the fortnight. Prices of all kinds are 10 taels to 15 taels higher, and holders very firm. Total settlements since July 1, 41,000 bales. We quote:—

	taels		taels
No. 1 Tsatlee	445	No. 1 Taysaam	375
No. 2 Tsatlee	425	No. 2 Taysaam	355
No. 3 Tsatlee	405	No. 3 Taysaam	340
No. 4 Tsatlee	380 to 385	No. 4 Taysaam	320
Inferior Tsatlee	350 to 370	Inferior Taysaam	305 to 315

Total export of silk from China to Europe is 39,375 bales, against 45,758 bales in 1858, or a decrease for this season of 6,383 bales. Tea—The business during the fortnight has been small, and prices remain without change. Arrivals have been also small, and consist of common and medium kinds. The following are the settlements reported, a great portion of which are contract receipts:—Congou, Ningchou, and Oopack, 3,200 chests, at 27 taels to 30 taels; Sunchunki and Hottow, 3,300 chests, at 17 taels to 23¼ taels; pekoe, 1,300 chests, at 27 taels to 33 taels. Green Teas—After the departure of last mail small settlements were made at rather firmer rates, which caused buyers to hold off, and purchases might now be made on rather easier terms. Settlements are estimated at 36,000 half-chests. Stock—Of black tea, 30,000 chests; of green, 85,000 half-chests. Total export from China to Great Britain is 49,374,200 lbs, against (the same time last year) 27,415,700 lbs, or an increase of 21,958,500 lbs for this season. To the United States, the export is 21,594,300 lbs, against 16,718,700 lbs last year, or an increase for 1859-60 of 4,875,600 lbs.

We have very little alteration to notice in the value of any kind of raw sugar. Inferior parcels, however, have gone rather cheaper. In refined goods, only a limited business has been passing, on former terms.

The coffee market has continued in a healthy state, at fully last week's quotations. The supply on offer is very moderate.

We have received from Messrs A. W. Heale and Co. the annexed report of the coffee trade of Ceylon to the 16th ult.:—

The weather since our last has been generally favourable, and shipments to date stand as follows:—

Plantation Coffee.				
To Great Britain.....	cwts 91,928	against last year,	cwts	66,405
Foreign Ports.....	6,265	—	—	7,693
Australia and India.....	4,418	—	—	2,870
	102,611			76,968
Native Coffee.				
To Great Britain.....	cwts 41,970	against last year,	cwts	16,743
Foreign Ports.....	8,287	—	—	51,642
Australia and India.....	493	—	—	9,128
	50,750			77,513

The Christmas and New Year holidays have caused some interruption to produce transactions. Native coffee has found its way to Colombo very slowly, and but few lots are just now offering at an advance of 1s, though recent purchases have been made at 37s 6d for unpicked. In plantation descriptions, we hear of a few transactions, since the date of our previous circular, at unchanged rates. The crops appear to have been generally well got in, and in several districts the estimated quantities have been secured.

Increased transactions have taken place in the rice markets, but without leading to any improvement in value.

The brandy market has become less active. Prices, however, still rule high. The circular of Messrs Martell has been issued, fixing the price of vintage 1859 at 240f, equal to 10s 5d, in hogsheads on the quay; 260f for 1858, equal to 11s 3d; and 280f for 1857, equal to 12s 2d per gallon. Rum has sold in limited quantities, at the late decline in the quotations.

The public sales of Spanish indigo have gone off somewhat heavily, at par to 2d per lb decline.

Messrs Moran and Co., of Calcutta, writing on the 7th ult., thus refer to the state of the indigo market:—

Our indigo market during the past fortnight has been devoid of much animation, and the sales have been on a very moderate scale owing to the delay in the arrival of Tirhoot parcels. We estimate the quantity sold up to date at about 49,500 maunds, and shipped on planter's account 950 maunds. Exports of indigo from the 1st November, 1859, to the evening of the 6th instant:—To Great Britain, 6,672 chests; to Havre and Bordeaux, 1,952; foreign Europe, 43; America, 136; Gulf, &c., 420; total, 9,223 chests.

Currants have changed hands steadily, at the late advance, and a fair business is doing in other fruits.

Hemp has sold on former terms; whilst jute and coir goods have ruled somewhat higher In wool, scarcely any business has been passing, owing to the approaching public sales.

Scotch pig iron has moved off slowly, at 59s 6d cash mixed numbers. A few parcels of spelter, for spring shipment, have changed hands at 21*l* per ton.

Linseed oil has realised 27*l* 10s per ton on the spot. Olive, owing to an increased duty on the export at Naples, has further advanced in price. Gallipoli is worth 61*l*; Malaga, 58*l*; and Magadore, 53*l* 10s. Spirits of turpentine have sold at 36s to 37s 6d per cwt.

The tallow market continues inactive. To-day, P.Y.C., on the spot, has changed hands at 60s, and for the last three months' delivery, 53s per cwt. High quotations have come to hand from St Petersburg.

"General trade is showing some signs of increased animation," observes the New York *Shipping List* of the 11th instant. "The dry goods people make favourable reports. Produce and provisions exhibit a fair degree of firmness, considering the not very encouraging advices from abroad. The foreign importations of the week, owing to the few arrivals consequent upon the prevalence of westerly winds, have been moderate."

IMPORTS OF FOREIGN AND COLONIAL WOOL.

Colonial and Foreign Wool imported into London, Liverpool, and Hull, from January 1 to 31, 1859 and 1860, and the total imports, including Bristol, Leith, Grimsby, and Hartlepool.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—Good qualities have been in steady demand by the trade and refiners at about former rates, but low soft sugars are dull, and can only be sold at some slight reduction on the previous value. Arrivals continue moderate, while the weekly clearances are steady for the time of year. The sales of West India during three days amount to 1,610 hhds, leaving the supply much reduced. By auction, 425 casks Barbadoes went at 37s to 45s. 315 casks other kinds: Jamaica, 38s to 42s 6d; grainy Demerara, 41s 6d to 46s per cwt. The deliveries last week were nearly 4,000 tons, making a net increase of 2,750 tons for home use, but a deficiency in those for export amounting to 840 tons. With landings rather below the deliveries, the stock showed some slight reduction, and it now amounts to 53,000 tons.

Mauritius.—On Tuesday, 5,300 bags in the sales found buyers at about former rates. Low to good brown, 30s to 38s; grainy brown and yellow, 39s to 45s 6d; crystallised, grey to fine yellow, 45s to 49s 6d; strong dry and refining kinds, 39s 6d to 43s per cwt.

Bengal.—545 bags were partly sold at 40s 6d for middling Gurpatta date; soft brown and low yellow bought in at 38s 6d to 39s 6d per cwt.

Madras.—Of 7,414 bags Aska, nearly 6,000 sold at 44s 6d to 47s 6d for middling to fine grainy yellow; soft yellow out of condition, 37s to 41s 6d. 4,543 bags of the lower descriptions were taken in: soft pasty brown, 31s; Jaggery, 30s; washed, 29s 6d per cwt.

Penang.—152 baskets low brown were bought in at 30s 6d per cwt.

Natal.—362 baskets found buyers at 39s to 44s for low to good yellow, and 34s to 38s 6d per cwt for brown.

Foreign.—On Wednesday the sound portion of 2,020 boxes Havana was taken in above the value, including grainy at 44s to 54s 6d; yellow and florettes, 43s to 47s 6d: the washed brought former rates. Yesterday, 1,490 boxes principally sold at 41s 6d to 45s for low to good yellow, and 38s to 40s 6d for brown. 564 casks Cuba realised 37s 6d to 45s 6d. 1,600 boxes Havana sold out at 43s 6d for No. 11.

Refined.—The market has been inactive with some accumulation of stocks, and prices show rather a downward tendency. Low goods are selling 50s 6d to 51s; crushed at 48s to 49s 6d; low to fine pieces from 43s to 47s per cwt.

MOLASSES.—200 puns West India have sold, chiefly Antigua and Dominica, at 17s; St Kitt's and Trinidad 16s 6d. By auction, 74 casks Havana melado were bought in at 32s per cwt.

RUM continues quiet. Proof Demerara quoted 2s to 2s 2d per gallon. The stock is 26,710 puns, against 24,554 puns in 1859 at same date.

COCOA.—Trinidad remains very scarce, and high prices have been paid by private contract for small lots. A trifling quantity of Guayaquil has sold at 75s per cwt.

TEA.—Since last Friday the trade have made few purchases, owing to the uncertainty attending the alterations in the Budget and the public sales declared. These commenced yesterday, when middling congous declined ½d, and the lower grades of scented caper ½d to 1d per lb. The catalogues contained 34,000 packages: 17,740 passed, and 5,800 packages sold.

COFFEE.—The public sales have been unusually small, and passed off at extreme prices. 14 casks 10 barrels and bags plantation Ceylon found buyers: superior bold, 82s 6d. 100 to 150 casks have been disposed of privately at rather higher rates. 200 bags native growth realised 58s to 62s 6d. Several contracts have been made in this description by private contract. 80 bales 55 half-bales Alexandria Mocha sold from 85s to 86s per cwt.

RICE.—Rather more inquiry has prevailed, especially for common soft grain descriptions, of which several large parcels have changed hands, including old Moulmien, Rangoon, and Necrancis at 8s to 8s 6d; new Rangoon, 9s 3d; Daccs, 9s 10½d; low middling to fine white Bengal, 10s 6d to 14s 3d; Ballam, 10s; and Java, 11s 9d to 12s per cwt.

IMPORTS and DELIVERIES of RICE to February 18, with STOCK on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	3300	4020	17130	16330

Exported	3200	2640	1940	5310
Stock	66560	84000	74120	5550

SPICES.—17 cases mace sold at 1s 6d to 2s 1d for middling reddish to fair. 155 cases brown nutmegs went irregularly, and chiefly sold: small, s 7d to 1s 11d; middling to good bold, 2s to 2s 10d; one lot 3s 10d: a small quantity Batavia limed, 1s 8d; defective, 10d to 1s. 7 cases cloves from Amsterdam brought 1s 1d to 1s 1½d for Penang. There has not been much business done in pepper by private treaty, but 928 bags Singapore of fair quality offered at public sale realised 4½d; and 489 bags Penang, 4½d to 4¾d. 215 bags middling white Penang sold at 7¼d to 7⅜d. 404 bags pimento were partly disposed of at 4d per lb.

SALTPETRE.—This article remains very dull and unsettled. 622 bags Bengal by auction on Tuesday were bought in, there being no satisfactory offers made: refraction 8½ to 5¼, 39s 6d to 41s; 17 to 11, 37s to 38s. Bengal, refracting 4 per cent., has sold privately at 41s 3d per cwt.

IMPORTS and DELIVERIES of SALTPETRE to February 18, with STOCKS on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	3330	2350	1060	1700
Delivered	1060	2500	2000	1560
Stock	4930	2800	5500	2170

Delivered last week 230 tons.

COCHINEAL.—Of 236 bags in public sale, a fair proportion met with buyers: Honduras silvers, pasty, 2s 11d to 3s; low to good, 3s 1d to 3s 8d Mexican silvers, 3s 3d to 3s 4d; low black, 3s 5d to 3s 6d per lb.

LAC DYE.—Of 683 chests brought forward, a few lots found buyers: L, 1s 4d; PS, 7½d to 9d per lb.

OTHER DYESTUFFS.—Gambier is steady at 17s to 17s 6d, a fair amount of business having been done. Cutch still sells rather slowly at 28s to 29s. Safflower is dull. Turmeric quiet: Bengal, 15s 6d to 16s 6d per cwt.

SHELLAC is very firm at the advance paid last week.

DRUGS.—There have been few public sales held this week. Yesterday, 60 cases aniseed oil partly sold at 8s 6d to 8s 7d; the remainder held at 8s 9d per lb. Castor oil sold at previous rates. The last transaction in East India camphor was at 9*l* per cwt.

JAPAN WAX.—1,000 boxes were bought in at 70s to 75s per cwt.

RUBBER.—East India continues very scarce at 2s 1d to 2s 2d. Some small parcels of Para by auction realised 2s 1d to 2s 4½d per lb.

METALS.—The market has been characterised by general inactivity this week. Several kinds of manufactured iron show some reduction. Scotch pig has fluctuated in value slightly, and is now quiet, closing at 59s 6d. The dispute between the makers and operatives in Scotland is still unsettled. Spelter has been dull throughout the week. No transactions are reported in foreign tin, and quotations must be considered almost nominal: Straits, 130s; Bancs, 135s. The smelters have not made any change in their prices of British; and copper is the same as before, with a moderate inquiry from consumers.

HIDES.—The public sales, comprising 85,000 East India, went off at previous rates.

HEMP.—Manilla meets with partial inquiry, and holders appear unwilling to sell freely at present rates. Russian is quiet at the quotations. The jute market has been exceedingly firm, with a steady business doing by private treaty, including some afloat. Small sales were held on Wednesday, and 2,576 bales went off at full rates to 10s advance, common to good marks ranging from 13*l* 10s to 18*l* 10s per ton.

LINSEED.—Arrivals are delayed by adverse winds. Large sales have been made in Calcutta seed afloat at 48s to 48s 6d per quarter.

OILS.—Olive has been excited, owing to the contemplated additional export duty in Naples. Prices were 1*l* to 2*l* higher: Gallipoli, 61*l*; other kinds, 53*l* to 58*l*. Fish oils remain dull. Of linseed, the production exceeds the demand, and the market is flat at 27s 6d on the spot; 28s for forward delivery. Rape is again higher: foreign refined, 41s; for delivery in the last six months, 43s; brown, 39s. Cocos-nut is less readily saleable. Fine palm sells slowly at 46s to 46s 6d per cwt.

TURPENTINE.—A large business has been done in American spirits at 37s 6d per cwt on the spot and afloat.

TALLOW.—The market has been quiet throughout this week, and, notwithstanding the firmness displayed by the holders of duty paid stock, prices of foreign are rather lower in all positions, viz.: 1st sort Y. C., 59s 6d to 60s; for the last three months, 53s per cwt. Consumers buy sparingly, yet the deliveries do not show any material diminution.

PARTICULARS OF TALLOW.—Monday, February 20.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The sales were small to-day, comprising only 111 casks Barbadoes and 3,061 bags Mauritius, these selling at previous rates. Transactions in West India for the week 2,100 casks. A floating cargo of Havana, No. 12½ to 13, sold at 29s 6d per cwt for the United Kingdom.

COFFEE.—121 casks plantation Ceylon sold steadily: fine ordinary to middling, 63s 6d to 71s 6d; 728 bags native: good ordinary to good, 60s to 61s. 1,850 bags Bahia, 52s to 57s; damaged, 46s 6d to 54s.

COCOA.—446 bags Bahia sold from 45s to 47s per cwt.

RICE.—1,863 bags middling dusty to good white Bengal sold at 11s to 13s. By private contract, 14,000 bags soft grain descriptions sold at 7s to 9s per cwt.

TEA.—There was a better demand at the sales to-day. Medium congous recovered the decline previously established. 7,250 packages sold, two-thirds of this quantity being printed "without reserve."

DYESTUFFS.—Common Bengal turmeric sold at 14s to 14s 6d.

HEMP.—1,208 bales Manilla part sold at 23*l* 10s for middling. 50 tons Petersburg clean bought in at 27*l* 10s to 28*l* 10s per ton.

OIL.—305 casks palm part sold at 44s to 45s 3d per cwt.

TALLOW was unaltered.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very quiet this week, with the exception of treacle, which is in demand. 150 tons of 6 and 10 lb loaves have been sold for forward delivery at 40s 6d. Nothing doing in crushed. Also several parcels of Dutch crushed sold ready and for forward delivery, for the usual standard marks, at 32s 3d, 32s 6d to 32s 10d f.o.b. in Holland.

GREEN FRUIT.—Market clear of oranges, prices advanced in consequence: two cargoes of St Michael's, sold by Keeling and Hunt at public sale, went at an advance of 2s to 3s per box. A moderate sale for nuts, importers awaiting the result of the Budget, which involves a total repeal of duty as well as on every article of green fruit. More doing in lemons, confectioners being buyers. Seville sours scarce at 10s per chest higher.

DRY FRUIT.—There has been no activity in currants this week; but at public sale, on Thursday, about 150 tons were taken by the trade at full prices, old duty allowed, which has given more firmness to the market. There still exists an inquiry for 40s fruit, which, however, is scarce. Raisins continue entirely neglected, and figs also.

FLAX unaltered.

HEMP.—Market quiet at the quotation, and but little business done this week.

COTTON.—Sales of cotton wool from Friday, 17th February, to Thursday, 23rd, inclusive:—400 bales Surat, at 4¾d to 5d for middling to fair; 300 bales Madras, at 5⅜d to 5¾d for middling fair to fully good fair Tinnivelly, and 6¾d a few fine Bourbon seed. The demand has been

limited, and the market quiet. Prices of Surat continue steady, but for the better qualities of Tinnivelly rather higher prices have again been obtained, making an advance of about ½d per lb during the fortnight.

SILK.—The silk market continues inactive, without alteration in prices.

TOBACCO.—A slightly improved demand has been experienced for good and useful descriptions for home trade, at steady prices.

TIMBER.—The trade in wood is almost suspended during the agitation on the proposed reduction of import duty, though the Government proposals of retaining a nominal duty on all wood are popular. The aim of the foreigners is to obtain half or all of the intended reduction. If this is done, the reduction will not displace any of the large supplies of wood now drawn from British possessions. The quotations of the market are not varied, though speculative purchases have been made at some advance.

LEATHER AND HIDES.—The leather trade of the past week has been limited in extent, and at Leadenhall, on Tuesday, there was very little general desire to purchase. The fresh supplies, however, were not large, and former prices are maintained. Good shaved hides and calf-skins were the articles most in request.

METALS.—We find a little more animation in some branches of metals, but, on the whole, there is a want of life. Copper is quiet in demand, but prices remain steady. Iron shows no change, pending the fate of the commercial treaty, which, if confirmed, would probably stimulate operations. Tin is languid, and tends rather downwards in prices again. Lead is in excellent inquiry, and is buoyant in price. Spelter has had fair attention, and a healthy business. Tin plates look better, in consequence of buyers coming forward again for the United States.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	61	9
Fat by ditto	3	3
Yellow Russian	61	6
Melted stuff	42	6
Rough ditto	25	0
Greaves	16	0
Good dregs	7	0

Imports this week 687 casks.

PROVISIONS.

Fine Irish bacon in demand. Market quite bare of fresh bacon, very little being offered. Shippers very chary about selling forward. Market very firm.

METROPOLITAN CATTLE MARKET.

MONDAY, Feb. 20.—The total imports of foreign stock into London last week amounted to 1,953 head. In the corresponding week in 1859 we received 2,645; in 1858, 495; in 1857, 1,208; in 1856, 612; in 1855, 289; and in 1854, 2,775 head.

For the time of year, about an average number of beasts came fresh to hand from our own grazing districts, as well as from Scotland. Their general quality, however, was by no means first-rate. For most breeds there was a steady, though not to say active, demand, at last Monday's currency. The extreme value of the best Scots and crosses was 4s 10d per 8 lbs. There was only a moderate number of sheep on offer. The mutton trade was firm, at prices fully equal to last week, some prime Downs having realised 5s 10d per 8 lbs. About 200 shorn sheep were on offer, and they sold at 10d per 8 lbs beneath those in the wool. We have again to report a firm trade for veal, at very full prices. The show of calves was very limited.

SUPPLIES.

	Feb. 22, 1858.	Feb. 21, 1859.	Feb. 20, 1860.
Beasts	3980	3317	3890
Sheep	16550	17550	18510
Calves	107	87	91
Pigs	420	300	210

THURSDAY, Feb. 23.—Although only a moderate supply of beasts was on sale here, to-day, the demand for all breeds ruled inactive, at about Monday's currency. Sheep—the show of which was rather limited—changed hands slowly; nevertheless, the quotations were supported. The few lambs in the market moved off heavily, at from 6s 2d to 6s 10d per 8 lbs. The sale for calves was extremely inactive, at a decline in prices of fully 4d per 8 lbs—the top figure not exceeding 5s 6d.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	6	5	8
Second quality ditto	3	8	4	2	Large coarse calves	4	8	5	0
Prime large oxen	4	4	4	8	Prime small ditto	5	2	5	6
Prime Scots, &c.	4	8	4	10	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	2	Small porkers	4	2	4	10
Second quality ditto	4	4	4	10	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	5	0	5	4	Quarter old store pigs	23	0	29	0

Total supply—Beasts, 1,050; sheep, 3,122; calves, 122; pigs, 300.
Foreign supply—Beasts, 122; sheep, 594; calves, 72.

NEWGATE AND LEADENHALL

FRIDAY, Feb. 24.—The supplies of meat here, to-day, were seasonably good. Generally speaking, the trade ruled inactive, as follows:—

Per 8 lbs by the carcass.

	s	d	s	d		s	d	s	d
Inferior beef	2	6	2	10	Mutton, inferior	3	2	3	6
Middling ditto	3	0	3	4	— middling	3	8	4	2
Prime large	3	6	4	0	— prime	4	4	4	6
Prime small	4	2	4	4	Large pork	3	6	4	2
Veal	4	4	5	0	Small pork	4	4	5	0

HOP MARKET.

MONDAY, Feb. 20.—Our market continues affected by the proposed change in the duties, and the demand, which had been previously limited, has completely stopped. Prices remain nominally the same, as follows:—Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, Feb. 24.—The market is in a quiet state, waiting the result of the budget.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Feb. 20.—During the past week the arrivals coastwise have been moderate; but, owing to so many being left in store unsold from the former stock, the trade is still dull. The following are this day's quotations:—York Regents, 90s to 140s; Lincolnshire ditto, 80s to 95s; Dunbar ditto, 90s to 120s; ditto reds, 85s to 95s; Perth, Forfar, and Fifeshire Regents, 75s to 90s; ditto Rocks and reds, 70s to 80s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, Feb. 23.—The arrivals of home-grown produce have been limited coastwise and by rail, since our last report, and the supplies on hand very short; trade rules generally brisk at previous rates:—York Regents, from 140s to 150s; ditto Flukes, 130s to 160s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 90s to 120s; ditto Cups, 80s to 95s; Dunbars, 120s to 140s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 15s to 4*l* 8s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 10s per load. A moderate supply and a fair demand.

CUMBERLAND.—Meadow hay, 3*l* 0s to 4*l* 10s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 12s per load. Trade firm.

WHITECHAPEL.—Meadow hay, 2*l* 15s to 4*l* 8s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 10s per load. Trade steady.

COAL MARKET.

Ships at market, 198; sold, 144.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 24.—There is rather more inquiry this week; but as the trade still confine their purchases to the supply of actual wants, we have no great amount of business doing, but prices continue very firm.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, Feb. 24.—Grain market moderately attended. Wheat in fair demand at the advance. Flour neglected. Indian corn steady at full prices. Galatz, 34s 6d; Egyptian, 33s 6d; Ibrail, 33s 6d. Beans firm; all other articles quiet.

The Gazette.

TUESDAY, Feb. 21.

BANKRUPTS.

W. J. Thorpe, Commercial road, New Peckham, painter.
G. and M. Simons, King's square, Goswell road, watch manufacturers.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending February 11 amounted to 449,058*l*, and for the corresponding week of 1859 to 417,690*l*, showing an increase of 31,368*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 190,424*l*, and for the corresponding week of last year to 177,962*l*, showing an increase of 12,462*l*.

DUBLIN AND BELFAST JUNCTION.—The report of the directors states that the receipts for the half-year ending the 31st of December amounted to 37,457*l*, while the working expenses were only 11,200*l*, or 29*l* 18s per cent. The total receipts for the year 1859 amounted to 65,133*l*, the expenses to 22,562*l*, and the profit to 42,571*l*; while for the year 1858 the receipts amounted to 59,659*l*, the expenses to 21,065*l*, and the profit to 38,594*l*, showing an increase of 5,474*l* in the receipts, and of 3,977*l* in the profits.

BLACKBURN.—The directors, in their report, state that the estimated deficiency upon the winding-up of the company in excess of 69,000*l* payable by the Lancashire and Yorkshire Company amounts to 8,388*l*. The Lancashire and Yorkshire Company have also brought forward claims for liabilities, but the directors have entered into an agreement with that company to settle the whole of the claims for 11,000*l*, which amount is to be paid out of the sums available for dividend until it is cleared off. The 11,000*l* will be equal to 10s 6d from the dividends payable in respect of each share in the Blackburn Company.

SAN PAULO (BRAZILIAL).—The report of the directors states that the whole of the shares which constitute the guaranteed capital of the company having been subscribed for, and the deposits thereon duly paid, the directors have completed the registration of the company. The board have entered into a contract with Mr Brunlees, civil engineer, for the entire engineering department of the whole line, and with Messrs R. Sharpe and Sons for the construction of the line, the purchase of land, the supply of rolling stock, and the maintenance of the permanent way for 22 months after the opening of the line. The next call will be announced at the general meeting in August next.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Feb. 20.—Business in the railway market was again very limited, the only feature being a demand for Sheffield, which has consequently advanced 1 per cent. In the colonial market, Indian guaranteed showed an occasional advance. Buffalo and Lake Huron also improved, and Grand Trunk of Canada left off steadily at 35 to ½. Foreign descriptions were quiet, and the only change of importance was a rise in Bahia to ¼ discount to par. Pernambuco were last quoted 1½ to 1¾ dis., and San Paulo, ¼ to ⅜ dis. American securities closed about the same as on Saturday. In joint stock banks there was a reaction in Ottoman to 19¼ to ⅜. Mining and miscellaneous shares experienced no material variation.

TUESDAY, Feb. 21.—The railway market showed increased firmness, and in several of the leading stocks an advance took place. Caledonian improved ½ per cent., and London and North-Western, Lancashire and Yorkshire, South-Eastern, which was especially in demand, and Sheffield, ¼. North-Eastern descriptions and North British were flat. In the colonial market, Grand Trunk of Canada was slightly higher. French descriptions, Lombardo-Venetian, and Great Luxembourg advanced, especially the latter. In American securities there was a rise in the shares of the New York Central. Mines, with one or two exceptions, have shown a heavy tendency. In joint stock banks a further slight reaction took place in Ottoman, the final price being 19 to ¼. No change of importance occurred in miscellaneous descriptions. The new Canadian loan left off, scrip 2 to ½ pm., bonds 100½ to ¾; Victoria debentures, new, 111 to ½; Bank of Turkey, ⅝ to ¾ dis.

WEDNESDAY, Feb. 22.—The railway market was again very firm, and showed in most cases a further advance. The public continued to invest in an increased rate in the more desirable stocks, while the customary realisations after the payment of the half-yearly dividends were on this occasion unusually limited. Great Western, South-Eastern, and Great Northern were chiefly in request, and closed to-day about ¼ per cent. higher. Some considerable speculative purchases took place of Oxford, Worcester, and Wolverhampton, and of Sheffield, the former especially advancing about 2 per cent. In the colonial market, Indian guaranteed continued steadily to improve. Grand Trunk of Canada stock advanced to 35½ to 36, while Great Western shares were flat at 12⅞ to ½. French descriptions and Lombardo-Venetian were higher. Mines were steady, and in one or two instances showed an advance.

THURSDAY, Feb. 23.—In the railway market the principal feature was a rise in Great Northern A stock, which, after touching 99¾, closed at 99 to ½, or more than 1 per cent. higher than yesterday. The ordinary stock also improved to 109½ to 110. French shares were firmer. American securities showed no alteration of importance. Mines were quiet, and in one or two cases slightly higher. In joint stock banks the Chartered Australian descriptions were firm. Miscellaneous descriptions closed about the same as yesterday.

FRIDAY, Feb. 24.—A steady business was transacted in the Railway share market, and prices showed rather more firmness. In the Colonial Lines Grand Trunk of Canada declined to 35 and 35¼; and Great Western of Canada to 12⅞. Joint Stock Bank and miscellaneous shares are steady at former rates.

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.

79 St Paul's churchyard, London.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss. 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER 228 Piccadilly, London

INTERESTING TESTIMONIAL IN FAVOUR OF DR LOCOCK'S PULMONIC WAFERS.—An eminent Wesleyan Minister, the Rev. W. H. Evans, in writing the biography of his father, in the WELSH WESLEYAN MAGAZINE for December, 1859, says:—"He had been very painfully affected by an asthmatic complaint and a troublesome cough; but by the use of Dr Locock's Wafers these were removed, so that he enjoyed ease in his latter days, and was entirely free from the cough which so generally troubles old ministers."—See the WELSH WESLEYAN MAGAZINE for December, 1859, p. 402. — Dr Locock's Pulmonic Wafers give instant relief and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. They have a most pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all medicine vendors.

HOLLOWAY'S OINTMENT AND PILLS.—Appearance.—By the first sight are most things judged, and partiality or prejudice for the object is formed at once. In the human body disease is always pitiable; but some cutaneous diseases are almost repulsive. Whatever their nature, duration, or intractability, they are invariably cured by the conjoint use of Holloway's purifying remedies, which, acting on the blood, reach the most distant vessels in the body, thoroughly cleanse them, displacing all disease, and restoring softness and elasticity to the skin, and a perfectly clear and healthy complexion. These inestimable medicaments are the safest and best preparations extant for cleansing, beautifying, and preserving the skin. They are at all times perfectly harmless, and their purifying effects are always permanent.

NO MORE MEDICINE.—For Habitual, Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints Du Barry's delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D.F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 51,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, at 1s 1½d; 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason, and Co., 182 Piccadilly, London; and all grocers and chemists.

DR ROBERT ROWE ON INDIGESTION.

This day is published, price 2s 6d, the fifteenth edition,

NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.

By G. ROBERT ROWE, M.D.

"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.

"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.

"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.

Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.

London: J. Churchill, and o be had of all booksellers.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S, &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of al booksellers.

A TOILETTE REQUISITE FOR THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge. 13 Wellington street north, Strand, W.C.

DR KAHN'S MAGNIFICENT ANATOMICAL MUSEUM, top of the Haymarket (acknowledged by the whole of the Press to be the most useful and instructive of any in existence), is open daily for Gentlemen only, from 12 till 5, and from 7 till 10. Admission One Shilling. Descriptive handbooks gratis. Dr Kahn's Popular Lectures on the "Philosophy of Marriage," daily at 3 and 8 o'clock precisely. Syllabus—Unhappy and Unhappy Unions, and their causes—Youthful Vices and Indiscretions, and their results—Disqualifications for Marriage, and their cure—the Physiology of Reproduction—Self-Inflicted Miseries—Sterility and it causes—How to Secure Moral and Physical Happiness.

N.B. Dr Kahn's Treatise on the above subjects, entitled "The Philosophy of Marriage," sent post free on receipt of 12 stamps, direct from the author, Harley treet, Cavendish square, W

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies PATENTED INCORRODIBLE TEETH, without extracting Teeth or stumps, on his never-failing and painless principle of SELF-ADHESION, rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his OSTEOPLASTIC Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square. London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c, which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by Mr CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I. Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

PEMARTIN'S CELEBRATED SHERRIES.

RAIL PAID TO ANY STATION IN ENGLAND.

THOMAS NUNN AND SONS,

WINE, SPIRIT, AND LIQUEUR MERCHANTS,

(ESTABLISHED 1811),

21 LAMB'S CONDUIT STREET, FOUNDLING HOSPITAL, W.C.,

Respectfully call the attention of the public to the SHERRIES of the above eminent shipper: they are extremely soft and nutty, and so perfectly mellow and free from heat or the slightest approach to acidity, as to render them alike favourites both with the connoisseur and the invalid.

Very good	34s per dozen	.....	9l 18s per 6 dozen	.....	20l 15s per quarter cask

ALLSOPP'S PALE OR BITTER ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

LONDON.....	At 61 King William street, City.
LIVERPOOL	At Cook street.
MANCHESTER.....	At Ducie place.
DUDLEY.....	At Burnt Tree.
EDINBURGH	At Union street lane.
GLASGOW.....	At 115 St Vincent street.
DUBLIN	At 1 Crampton quay.
CORK	At 25 Cook street.
BIRMINGHAM.....	At Temple street.
WOLVERHAMPTON	At Exchange street.
WORCESTER	At the Cross
SOUTH WALES	At 18 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

CROSSE AND BLACKWELL, Purveyors in Ordinary to Her Majesty, invite attention to their PICKLES, SAUCES, TART FRUITS, and other Table Delicacies, the whole of which are prepared with the most scrupulous attention to wholesomeness and purity. C. and B. have for many years enjoyed the high honour of supplying Her Majesty's Table with their Manufactures. A few of the articles most highly recommended are—Pickles and Tart Fruits of every description, Royal Table Sauce, Essence of Shrimps, Soho Sauce, Essence of Anchovies, Orange Marmalade, Anchevy and Bloater Pastes, Strasbourg, and other Potted Meats, Calf's-foot Jellies of various kinds for table use, M. Soyer's Sauces, Relish, and Aromatic Mustard, Carstairs' Sir Robert Peel's Sauce, and Payne's Royal Osborne Sauce. To be obtained of all respectable oilmen, grocers, &c., and wholesale of Crosse and Blackwell, 21 Soho square, London.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL administered with the greatest success in cases o CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of nomberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuinness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physicium as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted, Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NON CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES.

ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

COCOA.—TAYLOR BROTHERS'

PATENT LENTILIZED COCOA is pronounced by Professor Letheby and Dr Hassall to be superior in nutritious element to all others. See their reports, printed on the labels of each canister. Sold by all grocers at 1s 6d per lb.

LILLE COLZA OIL

for MODERATOR LAMPS, 4s and 4s 6d per Gallon. It being essential in order to obtain brilliancy of light to have Oil that is perfectly bright and pure,—most especial care is taken by

WHITMORE and CRADDOCK

in selecting only from the finest parcels imported into this country, and they guarantee its delivery in precisely the same fine condition as when drawn from the tanks at Lille. Its burning qualities are unsurpassed by any known Oil at present in use. Delivered free of charge, anywhere within six miles, and by railway in casks of 15 gallons each and upwards.

WHITMORE and CRADDOCK.

The City Oil and Candle Depot, 16 Bishopsgate street within, London, E. C. Lists free.

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED,—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3¼-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair; Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.

—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

MANAGER.—Mr George Hayter.

SECRETARY.—Mr John Smith.

SOLICITORS.—Messrs Tucker, Greville, and Tucker, St Swithin's lane.

AUDITORS.—Edmund Pullein, Esq. (Harding, Pullein, Whinney, and Gibbons), Lothbury; J. T. King, Esq. (John King and Co.), 63 Queen street, Cheapside.

BROKERS.—Messrs Smith and Binney, 5 Angel court, Throgmorton street.

BANKERS.—London and County Bank, Lombard street.

It has long been felt as an evil that a very considerable portion of the trading community, whose transactions are numerous and important in the aggregate, are shut out from the present discount companies because their daily operations are not sufficiently large to be eared for by the present establishments. This Company is established to meet that want, and to afford additional facilities for the discount of bills, and for making advances on convertible securities; and while the Company will be prepared, if required, to undertake extensive advances, their more immediate object will be to make their operations as numerous as possible, rather than to absorb their capital by large transactions.

One of the distinguishing features of this Company is that its shareholders will have a preference as to any approved bills or securities they may send in for discount or to be advanced upon, a course obviously highly advantageous to them, and productive of the double benefit of providing capital for their business, and at the same time adding to the funds of the Company, of which they will become participators in the shape of dividends upon their shares.

The capital of the Union Discount Company will be £250,000 (to be increased to £500,000), in 50,000 shares of £5 each, on which £1 per share only will be paid.

The ordinary business of discount houses will be carried on, including the discounting of good trade bills, and advancing on approved security and other available property.

Money will be received on deposit, interest on which will be allowed at the current rate of the day.

The Directors reserve to themselves the right of allotting the shares in any number, and to such persons as they may consider desirable; and where a choice of business is necessary to be made, a preference will be invariably shown to the shareholders of the Company.

Each application for shares must be accompanied by the payment of ten shillings per share on the number applied for to the London and County Bank, or direct to the Secretary (at the convenience of applicant). If no allotment is made, the money so paid will be returned free of any deduction; or if any allotment is made less than the number applied for, the amount so paid will be applied towards the payment of the deposit on such number of shares as are allotted.

The Company do not propose opening any drawing accounts with their customers.

All applications for shares to be forwarded to the Secretary or Brokers.

NATIONAL DISCOUNT COMPANY

(LIMITED), 35 Cornhill, London. Subscribed Capital, £2,000,000. Paid up, £385,345.

Approved mercantile bills discounted for parties properly introduced.

Money received at interest on deposit, repayable on call or at fixed periods.—By order of the Board,

RICHARD PRICE, Secretary.

Cornhill, February, 1860.

Also, the immense stock of fashionable Stoves, Fenders, Fire Irons, superior Cutlery, Tea Trays, Baths, and Japan Ware, brilliant Electro-Silver Plate, General Furnishing Ironmongery Goods, &c. &c., will be found the most extensive in London, and the prices are all marked in plain figures.—Panklibanon, 56 and 58 Baker street Illustrated books sent free.

N.B.—Registered Fire Guards, 10s each.

WEST HARTLEPOOL HARBOUR AND RAILWAY.

At the Annual General Meeting of the West Hartlepool Harbour and Railway Company, held at West Hartlepool, on Thursday, the 23rd day of February, 1860, Ralph Ward Jackson, Esquire, in the chair, the following resolutions were unanimously passed:—

Moved by the Chairman, seconded by Admiral Cator,—That the reports and accounts submitted to this meeting be received, approved, and adopted on behalf of this Company; and that the interests and dividends paid during the last year, in respect of the loans and share capital of the Company, be confirmed and be in like manner continued to be paid by the Directors during the current year.

Moved by George William Rowley, Esquire, seconded by Nicholas Wood, Esquire,—That this meeting desires to express its entire confidence in the Chairman and Directors, and its grateful sense of the disinterested and able manner in which they have so successfully conducted the affairs of the Company to their present sound and prosperous state. To the Chairman, personally, the meeting tenders the expression of its gratitude for the unselfishness and high honour which have always characterised his conduct.

Moved by Joshua Byers, Esquire, seconded by James Wall, Esquire,—That the cordial thanks of the proprietors be given to the Committee of Assistance, and especially to Mr Sturge, their Chairman, upon whom the largest portion of the labour has fallen, for the time and the great pains which have been bestowed during the last twelve months in the examination of the Company's affairs; and also for the satisfactory report which the Committee of Assistance have presented, and for their liberality in declining to be reimbursed by the Company for their expenses. And this meeting requests the Directors and Auditors will continue their able services in the Company's affairs, and also that Mr Sturge and his colleagues will kindly continue their valuable assistance to the Directors on all points on which they may wish advice for the interests of the Company.

Moved by James Wall, Esquire, seconded by Admiral Cator,—That the holders of the Consolidated Stock be paid a dividend at the rate of 4½ per cent. per annum for the last half-year, payable on the 21st day of March next.

Moved by the Chairman, seconded by George William Rowley, Esquire,—That the documents and securities referred to in the Directors report, for securing the coal traffic to this Company, and approved by the Committee of Assistance, be now confirmed, and that the same be perfected and executed by this Company by the affixing of their common seal thereto.

Moved by the Chairman, seconded by Robinson Watson, Esquire,—That the Bill now submitted for the consideration of the Proprietors, intituled "a Bill for regulating the capital and borrowing powers of the West Hartlepool Harbour and Railway Company, for granting further powers, and for other purposes," be and the same is hereby approved;—and this meeting accordingly requests the Directors to promote the passing thereof into law, subject to such amendments and alterations as Parliament may require or approve.

RALPH WARD JACKSON, Chairman.

Moved by Nicholas Wood, Esquire, seconded by George William Rowley, Esquire, and carried by acclamation,—That the cordial thanks of the Proprietors be given to Mr Ralph Ward Jackson for his unselfish and indefatigable exertions in the interests of the Company and its affairs, and for his able and courteous conduct in the Chair this day. ABM. BASNETT, Secretary.

West Hartlepool, 23rd February, 1860.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality.	Medium Quality.	Best Quality.
	£ s d	£ s d	£ s d
Two dozen full-size Table Knives, Ivory handles	2 4 0	3 6 0	4 12 0
One-and-a-half dozen full-size Cheese do.	1 4 0	1 14 0	2 11 0
One pair regular Meat Carvers	0 7 6	0 11 0	0 15 6
One pair extra size do.	0 8 6	0 12 0	0 16 6
One pair Poultry Carvers	0 7 6	0 11 0	0 15 6
One Steel for sharpening	0 3 0	0 4 0	0 6 0
Complete Service	4 14 6	6 18 6	9 16 6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III., c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,

MAPPIN BROTHERS,

Queen's Cutlery Works, Sheffield; and 67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

THE GREAT NORTHERN PALACE COMPANY (Limited).

PALACE OF THE PEOPLE, MUSWELL HILL.

Share Capital £400,000, in 40,000 shares of £10 each.
Debenture Capital £200,000.

DIRECTORS.

The Right Hon. Viscount Torrington, Chairman.
C. W. Faber, Esq., Director of the Great Northern Railway Company.
Francis Parker, Esq., Director of the Great Northern Railway Company.
Archibald Frederick Paull, Esq., Director of the Great Northern Railway Company.
I. N. Daniell, Esq., Chairman of the Blackwall Railway Company.
Geo. Gamble. Esq., Director of the Manchester, Sheffield, and Lincolnshire Railway Company.
The Hon. William Napier.
Herbert Ingram, Esq., M.P.
William Ford, Esq., Minto street, Edinburgh.
Charles Jack, Esq., Beech hill park, Enfield Chase.
F. B. Rew, Esq., Grove house, Finchley common.

BANKERS—Messrs Masterman, Peters, and Co., 35 Nicholas lane, Lombard street.
SOLICITORS—Messrs Hughes, Kearsey, and Co., 17 Bucklersbury.
AUDITORS—Messrs Alison and Waddell, Public Accountants, 7A Basinghall street.
ARCHITECT—Owen Jones, Esq.
ENGINEER—Sir Charles Fox.
SECRETARY, pro tem—Captain Barlow.
Offices—61 Gresham house, Old Broad street.

The Crystal Palace at Sydenham was established for the purpose of providing on a large scale the means of intellectual improvement and physical recreation for all classes of the community. In this respect the experiment has been so successful that, although situated on the southern side of the Thames, at a distance of about eight miles, by railway, from London bridge, and consequently difficult of access to the immense majority of the metropolitan population, it appears by the last report that 1,384,163 persons visited it during the twelve months ending 31st October, 1859, and the net profit realised during the same period amounted to £45,315 10s 8d, equivalent to 7½ per cent. on the capital of this Company, viz., £600,000.

The Palace of the People at Muswell hill will be readibly accessible to the vast population on the northern side of the river, numbering more than a million and a half of persons, who will not be subject to the inconvenience of being obliged to pass through the crowded streets of London. No institution of a similar character exists in this quarter; and it is a remarkable fact that this populous and wealthy district is entirely destitute of any great centre of attractioo, where the improvement and recreation of the masses can be combined.

The site selected for the Palace of the People possesses peculiar advantages for the erection of a building devoted to general instructian and amusement. It is on the line of the Great Northern Railway, within a quarter of an hour's journey from King's cross, and from its elevated position it commands extensive and beautiful views in all directions. The Palace will occupy nearly the centre of a circle, including within a radius of six miles Hornsey, Colney Hatch, Highgate, Kentish town, Hampstead, Hendon, Finchley, Tottertdge, Barnet, East Barnet, Southgate, Edmonton, Enfield, Stoke Newington, Tottenham, Clapton, Homerton, Hackney, Kingsland, Stamford hill, Finsbury, Islington, Highbury, Holloway, Camden town, Hyde park, the Regent's park, Maida hill, St John's wood, Westbourne terrace, Paddington, and Bayswater. From many of these places it will be within an easy walk, and from all the others it will be within a short drive by omnibus or carriage.

Passengers arriving by the London and North-Western, Midland, Great Western, and Eastern Counties Railways, will reach the Palace without traversing the streets of London, and the trains of the Blackwall, North London, and Metropolitan Railways will convey visitors every quarter of an hour from Fenchurch street, Farringden street, Paddington, and the intermediate stations. The works on the Metropolitan Railway are already commenced, and it is expected that they will be completed before the opening of the Palace.

The estate which has been secured for the purposes of the Company consists in the whole of about 450 acres of the finest land in the county of Middlesex, well supplied with water, thoroughly drained, and interspersed with ornamentel timber. It is intended to appropriate 159 acres to the special use of the Palace and Grounds. A reserve of 30 acres will be made in favour of Benevolent Institutions, connected with art, science, literature, music, horticulture, and the railway interest. The remainder of the estate (abent 270 acres) is admirably adapted for the the erection of Suburban Villas.

It is impossible to estimate the value which this surplus land will ultimately realise in consequence of the construction of the Palace and of the branch railway running through it, whereby direct access will be secured to the heart of London, over the Great Northern and Metropolitan lines.

The Palace of the People is projected in no spirit o opposition to the Crystal Palace at Sydenham. Experience has proved that fair competition is favourable to all sound enterprises, and although the range of local visitors which the situation of the Palace of the People must command, would seem to be of itself sufficient to ensure success, the general public may expect to derive advantage from the stimulus which each undertaking will receive from the efforts of the other.

In designing the Palace of the People, the architect, Mr Owen Jones, has endeavoured to secure some important additional attractions over its predecessors in Hyde park and at Sydenham, combined with a considerable saving in expense.

A large dome, visible from all parts of the building, will contain a winter garden, in which a proper heat will be maintained, without inconvenience or injury to the rest of the Palace. Semicircular colonnades at each end of the nave will be devoted to refreshment courts.

A spacious concert room, or lecture theatre, surrounded by corridors, projects from the centre of the building on the north side. This theatre will contain many thousand persons comfortably, and the corridors will enable them to take their seats, and to disperse with facility. Beneath the platform on which the concert room stands, is the railway station, where passengers will at once enter the building, under cover, without the fatigue of a long ascent. Visitors by carriages and on horseback will alight under a glazed corridor.

In arranging the plan of the grounds, Mr John Spencer, of Bowood, has endeavoured not only to make them objects of beauty and interest, but to furnish instructive examples of gardening.

Ample space is provided for out-door amusements, including archery, cricket, and riding; and, by means of a carriage drive, which will be carried round the grounds, invalids and equestrians will be able to witness these sports, and to enjoy the beauties of the scenery without alighting.

A distinct feature of the Palace of the People will be the endeavour to render the resources of the institution subservient to the cause of popular education. English history, geography, astronomy, geology, mineralogy, and mining will all be illustrated in a systematic manner; and horticulture, economic botany, and ornamental planting, will be practically taught and illustrated on an extensive scale.

Provisions will be made for a fund to be applied to the promotion of this object by means of lectures, prizes, and otherwise; the control and disposition of which will be confided to a council of distinguished men, who will preside over the Educational Department. The Right Hon. Lord Brougham has kindly consented to accept the office of President of this council.

Special advantages will be offered to Colleges, Schools, and Mechanic Institutes throughout the kingdom; and meetings of such bodies as may become permanently associated with the undertaking will be held in the Palace at convenient periods.

An agreement will be entered into with the Great Northern Railway Company for the working of the Railway to and from the Palace, on terms of mutual advantage, and such as will ensure ample accommodation to visitors.

The financial arrangements are as follows:—The shares will be of the value of £10 each, and the liability of each shareholder is limited to the amount of his holding. £2 10s per share will be payable on allotment. Three instalments of £2 10s each will be payable on the 30th June, 1860, 31st December, 1860, and 30th June, 1861, respectively.

Every original subscriber for not less than ten shares will be entitled to receive a free ticket, giving admission to the Palace and grounds for a period of ten years after the opening, in addition to dividends.

Taking as a basis of calculation the ascertained results at the Crystal Palace, and applying these results to the proposed undertaking, with the additional attractions and facilities of access above referred to, and regard being had to the greatly reduced amount of capital required, a handsome return on the shares may be confidently reckoned upon.

Applications for shares may be addressed, in the annexed form, to the Directors, at the offices of the Company, No. 61 Gresham House, Old Broad street, City.

FORM OF APPLICATION FOR SHARES.

To the Directors of the Great Northern Palace Company (Limited).

Gentlemen,—I hereby request that you will allot me shares of £10 each, in the Great Northern Palace Company (Limited), and I hereby agree to accept such shares, or any smaller number that may be allotted to me, and to pay the deposit of £2 10s per share on the shares allotted.—I am Gentlemen,

Name in full .....
Address in full.....
Date .....

Messrs Castello Brothers, Cushion court, Old Broad street, and Hercules passage, Stock Exchange.
IN LIVERPOOL—Messrs S. R. and R. Healey.
IN DUBLIN—Edward Fox, Esq., 51 Dame street.
OFFICES—84 King William street, City, E.C.

The Company has been formed to construct and work a Railway from Buenos Ayres to San Fernando, a distance of 15 miles. The Concession confers the following privileges:—

1st. A guaranteed interest of 7 per cent. per annum, for a period of 20 years.

2nd. A free grant of about 28 acres of land for stations in the City of Buenos Ayres, the towns of Belgrano, San Isidro, and San Fernando, and of the public land required for the line throughout, in perpetuity.

3rd. The right to import, FREE OF DUTY, all Rails, Machinery, Rolling Stock, and other materials necessary for the formation and maintenance of the Railway, as well as coal, coke, stores, &c., FOR EVER.

4th. All the property of the Company [moveable and immoveable] is declared free from Taxes or other contributions of a like nature FOR EVER.

5th. The works can be discontinued for a term not exceeding 18 months, and it is only compulsory to make 1½ miles by January, 1861.

A properly secured contract has been entered into with experienced contractors to construct the line, build stations, supply the fixed and rolling stock, and all other necessaries, and deliver the whole line in complete working order, on or before the 1st July, 1861, and to maintain the same in like condition for one year after completion, for the sum of £120,000. The line will be completed in sections, in conformity to specifications approved by Mr Edwin Clark, the Consulting Engineer.

The remunerative character of railway traffic in this Continent has been fully established by the experience of the railways at Lima and Copiapo, which have paid extraordinary dividends.

The Western line (the only railway now in Buenos Ayres) has been partially opened to to the public about two years, and is already developing a considerable amount of business.

It appears probable that the local traffic of this line will largely surpass that of the "Western line." The Directors, while they are unwilling in any way to disparage the principle of Government guarantees, place their chief reliance upon the material and commercial advantages of this line.

Applications for shares must be accompanied with the Bankers' receipt for £1 per share in part payment of the deposit of £2 10s per share; the balance, if any, must be paid on allotment, or, in default, the amount may be forfeited, and the allotmeat cancelled.

Detailed prospectuses and forms of application for shares may be obtained of the brokers and bankers; or at the Company's offices, 84 King William street, E.C.—By order of the Board,

A. ELBOROUGH, Secretary.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

THE GREAT EXHIBITION OF 1851

—Council Medal, Exposition Universelle, 1855—Grande Medaille d'Honneur.—Gallery of Bronzes d'Art.—F. BARBEDIENNE and CO., of Paris, respectfully inform the British public, that a complete COLLECTION of their MATHEMATICAL REDUCTIONS (by the process of M. Collas) from the CHEF d'ŒUVRES of ANTIQUE and MODERN STATUARY in the Galleries of of the Louvre, Florence, and Rome, Museum of Naples, and British Museum, may be seen at Messrs JACKSON and GRAHAM'S, 35, 37, and 38 Oxford street. PROSPECTUS OF

THE OAKERTHORPE IRON AND COAL COMPANY (Limited).

Constituted and Incorporated with Limited Liability under the Joint Stock Companies' Acts, 1856 and 1857.

Capital £120,000, in 12,000 shares of £10 each.

COMMITTEE.

William Worswick, Esq., Leicester (Swannington and Coleorton Collieries, Leicestershire.)

Thomas Walker, Esq. (Patent Shaft and Axletree Company), Brunswick Ironworks, Wednesbury.

Frederick Palmer Morewood, Esq., Leamington (and Swanwick Collieries, Alfreton.)

Edwin Marshall, Esq. (Brown, Marshalls, and Co.), Birmingham.

MANAGER AT THE WORKS—Mr William Evans, formerly of the Dowlais Iron Works, Merthyr Tydvil.

CONSULTING ENGINEERS — Messrs Woodhouse and Jeffcock, Derby.

BANKERS—The Derby and Derbyshire Banking Company, Derby and Belper; Messrs Williams, Deacon, and Co., London; Messrs Spooner, Attwoods, and Co., London; Messrs Attwoods, Spooner, Marshalls, and Co., Birmingham.

SOLICITORS—Messrs Stuart and Baly, 6 Gray's inn square, London.

AUDITOR.—C. Walford, Esq., F.S.S.

SECRETARY PRO TEM.—Mr Edward Corry.

REGISTERED OFFICE.

8 New Broad street, City, London, E.C.

The Oakerthorpe estates, comprising upwards of 1,000 surface acres, abounding in coal and ironstone of superior quality, are situate immediately contiguous to the town of Alfreton, and communicating with the Midland Railway by a branch line, intersecting the whole, at the Wingfield station, 14 miles north of Derby, in the immediate vicinity of the celebrated Butterley, Clay Cross, Swanwick, and Wingerworth collieries and ironworks.

These estates are held under leases for long terms for mining purposes at low royalties, viz., at the rate of 4½d per ton on coal, and 6d per ton on ironstone.

The minerals have been developed, workings carried out, and a blast furnace erected under the able supervision of Messrs Woodhouse and Jeffcock, the eminent mining and civil engineers, of Derby. Large quantities of coal and ironstone have been already raised, and their superior quality fully tested.

Shafts have been sunk, headings are being driven, railways are made, pumping and winding engines and other requisite machinery erected, and preparations are making for raising 2,400 tons of hard and furnace coal per week, and a sufficient quantity of ironstone for feeding two blast furnaces capable of making upwards of 280 tons of pig iron per week.

During the last two years the collieries and one blast furnace have been in active operation, the furnace producing iron of the highest character, and proving incontestably the excellency both of the stone and coal, and their adaptability to each other.

The pig iron and coal have both, from the first, found ready markets, and have given the greatest satisfaction to consumers. The demand for them is constantly increasing.

The coal and ironstone are got at extremely moderate rates, and limestone for fluxing, for which Derbyshire is celebrated, is procured in unlimited quantities, and at a low price, from the neighbourhood.

The whole of the materials for the manufacture of iron, whether pig or bar, being so readily obtainable, it is obvious that the locality is eminently adapted for the production of the best qualities of iron, at a minimum cost, and that works upon an extensive scale will pay a high per centage on the capital proposed to be employed.

The present proprietors have invested upwards of £60,000 in opening out the collieries and ironstone workings, sinking pits, erecting furnaces, pumping, winding, and blowing engines, engine-houses, fitting shops, managers' and workmen's houses, pneumatic lift, and all other machinery and plant (including 180 railway waggons) necessary for the efficient carrying on of the collieries and furnaces.

The second blast furnace in course of erection, and nearly completed, will ensure the consumption of the present yield of ironstone and the production of 280 tons of hot blast forge and melting pigs weekly as proposed.

The extreme purity of the furnace coal rendering it most suitable for puddling purposes, and the quality of the pigs having been most satisfactorily proved at some of the best works in Yorkshire and Staffordshire, it is proposed, hereafter, to extend the works, and erect another blast furnace (the foundation of which is laid), with a mill and forge, to convert its produce into malleable iron, as thereby the profits of the undertaking will be materially increased, and the full benefits that should result from a vigorous working of the estates be obtained.

To ensure the more steady and complete realisation of the advantages to result from carrying out the foregoing plan, the lessees are desirous of forming a Joint Stock Company, with limited liability, and of assigning thereto all their interest in the lease, workings, machinery, stock, and plant, in consideration of the repayment of their outlay without bonus, contributing themselves at least one-fourth of the proposed capital of the Company.

The profits of the undertaking it is estimated will be fully equal to 15 per cent. per annum on the capital employed.

It is proposed to call up the capital by five calls of £2 each per share; the first call being payable on allotment; the second call, March 31; third, May 31; fourth, July 31; and the remaining £2 as the extension of the works may require.

Applications for shares may be addressed to the Secretary pro tem., at the offices of the Company, 8 New Broad street, London; to the Consulting Engineers, Messrs Woodhouse and Jeffcock, Derby; or to the Solicitors, Messrs Stuart and Baly, 6, Gray's inn square London.

REPORT OF THE CONSULTING ENGINEERS TO THE COMPANY.

Midland road, Derby, Dec. 24, 1859.

To the Committee of the Oakerthorpe Iron and Coal Company (Limited).

Gentlemen,—The mines of coal and ironstone referred to in the accompanying prospectus lie under a surface of about one thousand acres, and include all the more valuable seams of coal and rakes or beds of ironstone found in Derbyshire.

Both coal and ironstone can be worked at a moderate cost, and iron can be made here at as low a rate, and of as good a quality, as at any of the works in the county.

The iron has been sold in various parts of the Kingdom, and pronounced to be of excellent quality, and the coal finds a ready market at remunerative prices.

The works are very favourably situated in every respect, being within 200 yards of the main line of the Midland Railway, with which they have direct communication, for the ready transit of their produce, and all the materials for the production of iron lying on the spot, it is almost impossible for a property of this nature to possess more advantages.

The royalties to the lessors are low, being only 6d per ton on ironstone, and £75 per acre for coal, being 4½d per ton.

The whole of the results of past outlay are available for future operations.

We have read and carefully considered the Prospectus of your Company, and are of opinion that the prospects of the undertaking fully warrant the expectations held out therein.—We are, Gentlemen, yours faithfully,

WOODHOUSE and JEFFCOCK.

FORM OF APPLICATION FOR SHARES.

To the Committee of the Oakerthorpe Iron and Coal Company (Limited).

GENTLEMEN,—I request you will allot me Shares in the said undertaking; and I hereby agree to accept the same, or any less number that may be allotted to me, and to pay the calls thereon, in conformity with the regulations of the Company.

Office, 337 Strand, London, W. C.

NOTICE.—IN CONSEQUENCE OF Messrs LAWES and MORTON having just commenced 1860 with opposition similar to that which they previously advanced, and wishing to do those gentlemen every justice, Mr THORLEY is induced to ENLARGE his coming PAMPHLET, making it 64 pages instead of 32—showing beyond doubt that their observations on the so-called "Concentrated Cattle Food," and so-called "feeding statistics," are without foundation; that the Rothamsted experiment was not made with his Food, and consequently that this complete failure must either be through mismanagement or from buying the condiment at the Wrong Shop.

The first impression of One Hundred Thousand Copies will be ready about the first day of March, and may be had post free on receipt of Three Stamps, on application to Joseph Thorley, the Inventor and sole proprietor of "Thorley's Food for Cattle," 77 Newgate street, London; 21 Broadway, New York, United States; Mr J. W. Thorley, Melbourne, Victoria; Mr Alfred Burt, Sydney, New South Wales; and of all his agents throughout the United Kingdom.—Feb. 2, 1860.

The Political Economist.

THE FRENCH ESTIMATE OF THE COMMERCIAL EFFECT OF THE TREATY WITH ENGLAND.

THE first effect in France of the announcement that a Commercial Treaty had been made with England was, as was natural, to suspend many of the most important operations of trade. The same uncertainty which for the moment paralysed the wine trade in England produced an analogous effect in France. Dealers did not wish to sell till they knew what the new price of their article ought to be; consumers did not wish to purchase till it was evident that they were not giving more than they ought. The Treaty and the English Budget have now been some time before the French public, and it is evident that the one and the other will come into actual operation without any very material change. A business-like opinion is now, therefore, being formed in France of the real result of the recent changes, and we have been at some pains to ascertain by personal inquiry what that opinion is likely to be. Our readers will remember that we are only giving an account of the views of *French* persons thoroughly competent to form a correct judgment, and that we are not now expressing any judgment of our own upon the subject.

In the first place, the French manufacturers do not seem to be much afraid, as they at first were, of a competition with our own. It is true that all prohibitions of English manufactured goods are abolished, but a very high protective duty is for the present to be maintained. That protective duty is set down at 30 per cent. *ad valorem* by way of maximum, but it will practically be often higher. The raw material of many kinds of manufactures is not higher in France than in England. France can buy cotton at New Orleans as well as we can. In such cases our advantage will be solely in manufacturing power; and if the price of the raw material were half the value of the article, a nominal differential duty of 30 per cent. *ad valorem* would be really a differential duty of 60 per cent. on the manufacturing power of the two countries. This fact is of the greatest importance, because the excellence of England is likely to be in the rougher and cheaper kinds of goods, in the price of which the cost of the raw material must always be a main element. Taking this consideration into account, the French manufacturers seem to have ceased to be very nervous. They are, they think, thoroughly acquainted with the market; they know the tastes of their countrymen; they have long been in the habit of satisfying it. They do not anticipate that English manufacturers will be able to send any new article which will come into extensive use, because a slight advantage in cheapness will not, at least for a long time, induce people to try new experiments. It is very possible that in this opinion they may be wrong, and that the superior energy and long-tried inventiveness of our manufacturers may enable them to see opportunities of making profit which the French do not perceive. All French opinions on commercial subjects are formed under the influence of a *system* of protection; and protection in commerce, as we know, signifies monotony and stagnation. Frenchmen are, therefore, more used than we are to imagine that the course of trade in the future will be the same as it has continued to be in the past. Nevertheless, it is interesting to hear what their opinions are.

Iron and steel manufactures constitute, the best judges seem to think, an exception to this rule. The raw material of these is cheaper in England than in France. We have far more experience than the French have in manufacturing many kinds of them; and our superiority in many articles is indisputable. The bette opinion, therefore, seems to be that a moderate French demand for these may be expected, *notwithstanding* the high protection for the French manufacturer that is still retained.

We should have anticipated that the trade in English machinery would have been affected by similar causes even to a greater extent, and that a considerably augmented demand for it would have sprung up in consequence of the recent changes. We have, therefore, been surprised to hear very competent judges deny that such would be the result. They think that French workshops will turn out as good machines as any which will be sent from England. We will not say that we dissent from this idea, especially as we are at present anxious rather to give an account of the opinions of French persons than to state our own. But we own we shall be surprised, if our long experience in machine-making, our cheap iron and good steel, are not found to tell very materially in our favour. Machine-making is a very various trade; the number of machines which modern industry requires is almost infinite; and, in consequence, it seems reasonable to expect that the varied experience of England, which has made her own machines and trained her own engineers and skilled workmen to the occupation during very many years, would give her a great advantage. Still good French judges say that it will not, and they *may* be right.

As to iron itself in an unmanufactured state, the opinion of the best informed persons we think is that the removal of protection will ultimately have a considerable effect, but that at the present moment it will not have much effect. Iron in France is at the present moment unusually cheap. The construction of railways increased the demand for, and raised the price of, iron in 1853 and 1854 to an unusual height. The usual consequences followed: the supply was much stimulated, and the temporary demand for the construction of railways has accordingly diminished. The largest trunk lines of the country have been made, and the military projects of the Emperor have diverted the national expenditure into less useful channels. In consequence the price of iron is now below its usual average,—and the cost of English iron will not for the moment be compared with the ordinary

value of French iron, but with a value accidentally reduced. When, however, these temporary circumstances have passed away, the effect of the reduction of the duty upon English iron will doubtless be seen. The amount of that reduction, it will be remembered, is very considerable. Previous to the Treaty the duty was, roughly speaking, 5*l* a ton; it is now to be reduced to about 2*l* 18s a ton till the 1st October, 1864, and then to 2*l* 10s. So great a diminution will ultimately, it is thought, have considerable effect, though casual circumstances may postpone the time at which it will become apparent.

As to coal, it is believed that the extent of country which will be supplied from England will be increased considerably. At present a great deal of coal is imported into France,—some from Germany, some from Belgium, and some from England. The Treaty reduces the duty on English coal by one-half, and the increase of consumption in consequence will be no doubt important. The opinion of the best judges seems to be that the whole of the North of France to a considerable distance from the coast will be entirely supplied from England; but they do not imagine that it will penetrate into the interior, or be imported to the Mediterranean coasts. Much of these opinions must, however, necessarily rest on a conjectural foundation. We know how various are the rates which English railway companies charge for the conveyance of coal, and that the cost of conveyance in so bulky an article is a principal element in its market price. French companies will have the same interest as the English in favouring the coal which their railways will bring to market, and will probably vary their charges accordingly. The Government also may interfere in the matter, and say what the rates shall be. This single circumstance would of itself make it rash to give any conclusive opinion as to the amount of English coal that will be sold in France. The opinion which seems generally received is that which we have stated, but we must not blind ourselves to the uncertainty of the only data upon which it can have been formed.

Such seems to be the French opinion as to the effect of the Treaty upon the imports from England into France. With respect to French exports to England, their anticipations, as is natural, are more sanguine. The very letter of the Treaty shows that such would be the most probable result. Those of its provisions which relate to the importation of English manufactures into France only substitute high protective duties for prohibitions: those which relate to French imports into England either abolish all duties, or impose only a low revenue duty upon them. It is evident that the effect of the latter must, in all probability, be greater than that of the former, and such is the French expectation. Many good judges believe that they will be able to export *in time* many of their wines into England. Even supposing that the English taste would only approve of strong wines, they say that they will be able to supply a considerable quantity which will be suitable to us. The South of France produces very many which are strong enough for any one, and it is stated that the quantity of these brought to market may within a moderate interval be largely increased. And it is hinted that it is easily possible to increase the alcoholic strength of wines by means of a little brandy. Strong wines, therefore, they believe they can supply us with; and they hope, not unreasonably, that some of their weak and cheap wines will also be consumed during the English summer to a very considerable extent. The removal of protection from silks, gloves, &c., will, it is thought, have considerable effect, though we cannot give any definite account of the extent to which it is expected to go.

The French dealers seem likewise to anticipate a great increase of trade in the miscellaneous articles of luxury which they manufacture so neatly, and in which their taste is so fine. And we apprehend there is little doubt that their conclusion is correct. We should not like very confidently to predict what the result of any changes in trade so considerable as those made by the Treaty and the Budget would be. The course of commerce depends on circumstances so various, that what seem to be the most natural anticipations may prove to be wholly erroneous. But if we were to venture on a definite prediction, we should say that the importation of small, miscellaneous, and indescribable articles of luxury from France into England would be the result which will most astonish us hereafter. Experience teaches us that a miscellaneous trade of this kind is very easily extended, because it ministers to the small wants of an infinite variety of persons in easy circumstances, who are always able to buy, and often on the watch to satisfy those wants in the way which is most agreeable to them.

THE NEW REFORM BILL.

We cannot say that the Reform Bill of the Government has affected us either with satisfaction or disappointment. It is what we all expected: its defect is that it makes a concession to false principle; its merit, that in degree that concession is not very great. There is no political measure we have ever advocated more strenuously and sincerely than the admission of the working classes to a fair representation. So far as that is effected by the Government measure we rejoice; but our satisfaction is completely damped by the entire absence of any vestige of principle for regulating the admission of that numerous class which constitute the great majority of the English nation. The true principle of representing classes is "conspicuous by its absence,"—to use Lord John Russell's own expressive phrase,—in the Government measure. We had no hope, indeed, that any such principle would be recognised by the Government Bill. Neither the Conservative nor the Liberal party have shown, as a party, the least disposition to grapple with the true question before them. The real problem to be solved has scarcely been recognised as yet in Parliament at all. Only a few thinking men, like Mr John Stuart Mill, Mr Hare, and others, have attempted a solution. But not the less is it melancholy to see statesmen of all parties abdicating their prerogative to guide and lead the public mind, and influenced only in their choice of measures by the consideration of what will most easily "pass."

We do not think it would be wise for members of Parliament to oppose the Government measure, because we do not believe that any measure really sound in principle could be carried in the present state of the public mind. It is in some important respects better than the late Government's measure, and if the question is to be settled for a time,—and the unwise pledges of public men redeemed,—it will probably be necessary that some such measure as this should pass. We should on many accounts be sorry to see the present Government defeated at the present crisis,—and even as regards the Reform Bill we should find no advantage—probably considerable disadvantage—in such an event. All parties are too deeply pledged for it to be possible to let the question rest. Should even the Conservatives, after a triumph on this Bill, decline to introduce any new measure of their own, the Liberals would scarcely be likely either to let the subject drop, or to take those deeper and wider views of it which are now beginning to prevail amongst thinking men. No influence affecting the deliberations of the Liberal party could be worse than the exigencies of hustings-speeches. There is some hope that the true principle of popular representation may gradually take possession of the public mind, if practical agitation is for a time silenced. But there would be no hope that the Liberal party out of power, and agitating to secure a return to power, would seize that principle. We do not, therefore, wish to see the Government defeated on this Bill. We believe that its more immediate practical consequences will not be injurious, and may even be beneficial,—for the class which in the larger boroughs at least will be enfranchised by it, are not at all unlikely to be superior both in *morale* and intelligence to the class immediately above them in wealth. But while cordially desiring to maintain the present Government in power, as a Government in every way superior to any that would take its place, and more especially for the sake of the manly and vigorous spirit of its Italian policy, we should be untrue to the principles we have always steadily maintained, if we did not in the frankest manner criticise the principle or no-principle on which this Bill is based.

Lord John Russell tells us that by its provisions about 200,000 new electors will be added to the borough constituencies, and probably twice that number to the county constituencies in England and Wales. As the present constituencies of the boroughs number about 440,000,—and of the county constituencies about 505,000,—the change will be equivalent to an increase of nearly 50 per cent.

n the former, and of more than 80 per cent. in the latter case. Nor do we deny that the classes thus enfranchised deserve a considerable influence in political affairs,—very likely as much—very probably more—than the class immediately above them. But we maintain that it is very unwise and unstatesmanlike to evade the pressing question, whether the fitness of the individual elector is alone to be regarded without any reference to the number of fellow-electors who will certainly support the same view and multiply his vote by hundreds of thousands. Are we, or are we not, to ignore the power which the mere fact of belonging to a numerous class carries with it? Are we to assume we have given practically only the same power to A that we have given to B, though A belongs to a class which can ensure all its opinions a speedy triumph, while B belongs to a class which can never hope to make its voice heard in the House of Commons at all? Is it true, or not true, that the educated elector in Marylebone has substantially equal power with the uneducated elector—though the former knows, in ninety-nine cases out of every hundred, that if he voted for the man he really wished to elect, he would be voting in a perpetual and miserable minority, while the latter knows, in ninety-nine cases out of every hundred, that the choice of the borough will certainly fall on a man after his own heart and that of his class? Will any one maintain that the man who has no hope of ever seeing a representative of his own principles returned to Parliament, has substantially equal power with a man who sees his own principles represented by the member chosen in nine elections out of every ten? And yet, is it not certain that if we are gradually to extend the franchise after the fashion of the present Bill, the electoral power will soon be deposited entirely in the hands of a class who have no peculiar qualification for Government at all,—and who want many qualifications which other classes, practically disfranchised, possess? On these grounds, we find it impossible to approve the policy of a Government which professes to mend the Reform Act of 1832, without attempting to supply the one great defect of principle which that Act shows. As we have said, we should regret much to see this Bill defeated, because we know well that its opponents have proved themselves to be equally unsound in principle on this subject, and are far less sound on every other. But we must honestly avow our belief that the Reform Bill shows far more willingness to drift helplessly, if only gradually, towards democracy, than we ought to find in statesmen of such large experience and such tried sagacity as Lord John Russell and Lord Palmerston.

With regard to the disfranchisements and the proposed distribution of seats, we have little remark to make. Lord John Russell need not, we think, have apologised for retaining,—we will not say small constituencies,—but the kind of constituencies which we find in small towns. Had he carried out his own former scheme of grouping these boroughs, so as to neutralise overweening personal influence, as well as the local prejudices of very small places, he would have done well. But it would have been most unjust to annihilate this class of constituencies. We have in the counties and the large towns adequate provision for the representation of Land, Capital, and Labour; but no adequate provision for the representation of what we may call the general interests of the country. There will always be a certain bias towards landed interests in the representative of the county,—a certain bias towards manufacturing interests or industrial interests in the representative of the large towns. The neutral tints,—if we may so call them,—of general intelligence will have no fair representatives, unless those places are also represented where there is no predominant political current. The small towns may be numerically insignificant taken separately;—taken collectively, they are of the most vast numerical significance, and their choice is more likely to represent the tone of general national English opinion, than that of either the counties or the large towns.

We cannot conclude without expressing our satisfaction that at least one member is to be given to the one liberal University of the kingdom. University culture has too long been identified with the traditional prejudices of Oxford and Cambridge. It is only just that cultivated liberal thought should have some opportunity of making itself heard; and we must say we see so few really educated constituencies, that we think the Government might well have afforded two members, instead of one, to a constituency that will have some claim to be esteemed thoughtful as well as liberal.

THE EMPEROR'S SPEECH.

The Emperor's speech promises peace. But if he be serious in the intention he indicates at once to veto the annexation of Tuscany to Sardinia, and yet to claim the province of Savoy for France as a guarantee against the formidable kingdom of 9,000,000 souls about to be founded on the Italian side of the Alps,—his speech does not portend peace. Were even Venetia, Lombardy, the Romagna, the Duchies, and Sardinia all united in one powerful kingdom, it would be something of an affectation in a French ruler to profess that his dominions were in any risk. Even then, France would number a population three times as great, and resources for defending her territory greater in a far higher proportion. But, as the matter now stands, for the Emperor of France to pretend that he needs the possession of the Southern slopes of the Alps in order to secure himself against the possible hostility of Sardinia, is simply the falsest of ambitious pretences.

What will be the position of Sardinia if the Emperor's scheme for Italy be carried out? Her Lombard province will be entirely at the mercy of Austria, who commands all the keys to it;—she will be menaced on the South by Naples,—a kingdom larger than her own, and master of a larger army, as well as by the remaining power of the Pope;—and she will be but imperfectly able to count on the aid of Tuscany, which is to be an independent State under another dynasty. To speak of a kingdom of recent formation, numbering at most a population of nine millions, and beset by enemies so powerful, as a formidable neighbour to France, is simply monstrous. Indeed, the possession of Savoy in addition would give to France the power of overruling the Sardinian policy as completely as if a Prince of French blood had been set by the aid of French arms upon the Sardinian throne. To ask for Savoy, while Venetia remains in the power of a powerful enemy, and Tuscany is paralysed by its isolation, is to ask for *far more* than an equivalent, in military force, for the Sardinian gain in Lombardy and the Duchies. Were the whole North of Italy, indeed, united under a single sceptre, we might acquiesce in the transfer of Savoy to France, as the *sine quâ non* of a great gain for Italy. But weak, overawed, and disunited as Italy must now be, for France to propose such a step as a needful guarantee for her own safety, is a very ominous mockery of Europe; and we are much mistaken if either Europe or England will consent to such a step.

It is possible, indeed, that the "advice" sent by the Emperor to Victor Emmanuel to decline the offer of Tuscany is meant only to induce speedy compliance as regards Savoy,—and would be either withdrawn, or, at least, not practically enforced, in case the surrender of Savoy were cheerfully made. But we have always feared, and often stated our fear, that the Emperor is scheming for an overwhelming influence in Italy,—and it is obvious that a complete union between Tuscany and Sardinia would tend to defeat these plans. But, be this as it may, England must at least refuse her consent,—nay, more, must unite with other Powers in actively opposing this new move of France, to which we can scarcely give any other term than that of treacherous. We knew well that she was grasping at Savoy; but hitherto she has only affected to demand it as the price of the complete union between Piedmont and Central Italy. Now that she proposes it, and yet refuses her assent to the union between Tuscany and Sardinia, Piedmont ought to be supported by the Great Powers in refusing to assent to so one-sided a bargain. The Emperor tells us that "this re-assertion of a claim to "a territory of small extent has nothing in it of a nature to "alarm Europe and give a denial to the policy of disinter-"estedness which I have proclaimed more than once,—for "France does not wish to proceed to this aggrandisement, "however small it may be, either by military occupation or "provoked insurrection, or by underhand manœuvres, but "by frankly explaining the question to the Great Powers. "They will doubtless understand in their equity, as "France would certainly understand it for each of

"them, that the important territorial re-arrangement which "is about to take place gives us a right to a guarantee "indicated by nature herself." We think it extremely unlikely, and extremely undesirable, that the Great Powers will understand anything of the kind. Frank as no doubt the explanation is, they will probably reply as frankly that by the Treaty of Vienna they were pledged not to permit the encroachments of France on the side of Savoy;—that the condition of Italy might no doubt be such as to render adherence to this pledge comparatively unimportant,—but that no state of Italy could be imagined which would render adherence to it of much higher importance than the present. Sardinia is in some respects even weaker from the recent contest. She has, at all events, turned Austria into a watchful and suspicious foe,—and it is of the very first importance that no occasion for a new contest between France and Austria on the plains of Italy should be given.

And, beyond this, it is of the greatest importance to all Europe to resist anything that looks like the old passion for aggrandisement in France. There is no plea, now, for the annexation of Savoy which might not be made with far more real force for a "natural frontier" in other directions. If France is afraid of 9,000,000 of united Italians, what would she feel towards 36,000,000 of united Germans, or even the 16,000,000 of united Prussians? The territorial reconstruction is a mere excuse, and—when urged in the same speech with the rebuke to the King of Sardinia,—a most unblushing excuse. "I did not hesitate to declare to the "King of Sardinia," says the Emperor, "that while "leaving him full liberty of action, I could not follow him "in a policy which had the fault of appearing in the eyes "of Europe (qui avait le tort de paraître aux yeux de "l'Europe) a desire to absorb all the States of Italy, and "which threatened new conflagrations." What Great Power, let us ask, in passing,—Austria apart,—had urged this fault in the policy of the King of Sardinia? Is it not universally known that it is the wish of Tuscany, and not the ambition of Piedmont, which has forced the policy of annexation on Victor Emmanuel? On the other hand, which of the Great Powers will not object to the annexation of Savoy on the part of France that "it has the fault of ap- "pearing in the eyes of Europe a desire to absorb" the passes which command Italy? If Europe is thus jealous of any addition to the dominions of one of her smallest and least powerful States, what will she say to the transfer of a country so important as Savoy to the most important of all continental kingdoms at the most critical of all moments? We have no hesitation in saying that Europe ought to disallow such a proceeding altogether. Even as the price of Italian unity, it would be objectionable enough; but without that gain, and without that safeguard,—for it would be a safeguard,—against an encroaching Italian policy on the part of France,—it is absolutely perilous. England, anxious as she is to preserve a pacific understanding with France will never assent to an arrangement which will but whet French ambition, while it will cruelly defeat Italian hope.

THE POPULARITY OF THE BUDGET.

The debates on the Budget have not probably added much that is new to the knowledge of such of our readers as take an interest in the subject. Points of detail have been elucidated; the alcoholic test of the strength of wines, and the relation between the Excise duties on home manufactures and the equivalent Customs duties on the same commodities when imported from abroad, have been explained. But the general conclusions which we formerly laid down on the subject have only been made clearer by the recent discussion.

The Budget has been accepted, and properly accepted, by the House of Commons, by what may, in the present Parliament, be justly considered a *very* large majority. It is true that the policy which it adopts is daring; that the calculations of augmented consumption which Mr Gladstone has made are, in the opinion of most of the best judges, sanguine; that, under other circumstances, a more cautious and a less startling policy would have been preferable; that it would have been better not to make so many changes at once, or to subject the revenue of the next few years to so considerable a risk. But we cannot always in finance, any more than in other political affairs, have everything we wish. The conclusion of a Commercial Treaty with France rendered it necessary to do now what might otherwise have been postponed, and there cannot be a doubt as to the great desirability of all the main alterations which are about to be made, though it may be, in some degree, a matter of regret that, from a singular conjuncture of political events, they were all made at once.

We are now approaching to the sort of indirect taxation which we have always advocated. We wish to see a few articles *steadily* taxed, so that traders will know what they have to pay; that industry will not be hampered by innumerable petty duties; that no vestige of protection may remain in our tariff; that the consumer may not be vexed by arbitrary fluctuations in price. So long as Customs duties are rendered necessary by our large expenditure and by our social circumstances, the form to which they are now rapidly approximating is that to which, as we have often shown, they ought to approximate. The value of the simplification of the tariff is best shown by the popularity of the Budget among men of business. It cannot be denied that the income tax, as at present levied, presses very hardly on incomes that are *earned* in trade and industry. Still, those who earn them are quite willing to pay that income tax to obtain the advantages of the simple tariff which Mr Gladstone has offered them.

As we have before pointed out, there may be considerable doubt as to the estimate of increased trade to be derived from the particular alterations which are now made. We are inclined to think that the increase will be slower than others have imagined, but we do not doubt that it will be substantial and durable; and that, whatever may be the effect of these particular changes, the trade of the country is rapidly augmenting Nor do we doubt that, as articles of general consumption still subject to duty partake of that increase, the Customs revenue will still become greater year by year. The changes now made will, we think, *tend* to reduce it, for a time, to a greater extent than more sanguine calculators imagine; but we have no doubt that the generally progressive industry of the country will, in the end, produce the same effects that it has done before, and that we shall within a moderate period, though how soon may be a question, again see our import duties as fruitful of revenue as before.

Until this period has arrived, or until some change in our circumstances shall have enabled us to reduce our expenditure, we must expect to pay an income tax at a high rate. And it is very fortunate that the discussion on Mr Du Cane's motion should have brought the fact into due prominence. There is no danger in the present alterations, *if* people will be content to purchase them at their fair price, *if* they will be content to pay the necessary direct taxation during the needful interval.

The Budget likewise commits us to an increase of what are called penny taxes. These are really taxes on business transactions, and it is important that their real principles should be correctly understood. The idea which lies at the root of them is that they are an *unfelt taxation*. It is believed, not incorrectly, that such a tax as the penny receipt tax is scarcely felt by any one,—that no one would believe he was richer if it were taken off,—that no one has ever been deterred from a single transaction in consequence of it.

But this must at once show what is the limit within which such taxes shall be imposed. They *must* be unfelt taxes. The moment they begin to press hardly on any particular class they lose their characteristic advantage, and are exposed to the objections ordinarily applying to taxes on trade and industry.

It is the first principle, therefore, of such taxes, that they must be diffused over a wide area, and, in consequence, not press hardly on any particular persons.

The second is, that they should have no tendency to diminish the number of transactions on which they are imposed. We need not now show exactly what classes of transactions come within this description. We shall have other occasions for so doing. But we think it wise now to point out that the adoption of the Budget has committed us to the extension of penny taxation so far as it can be applied consistently with these principles.

THE BOARD OF TRADE RETURNS FOR JANUARY, AND THE TRADE WITH FRANCE.

With the issue of the Board of Trade Tables for January, we get the estimated real value of the imports into the United Kingdom for the last year, which is always a month behind the corresponding returns of exports out of the United Kingdom. We have it, therefore, now in our power to estimate the value of the whole trade of England during the last year; and we propose to analyse especially the trade with France, as having an especial interest at present in view of the expected changes in the commercial relations between the two countries. But, first, as to the total value of our trade. We find that the returns for the last three years are as follows :—

	1857. £	1858. £	1859. £
Exports (declared value).....	122,066,107	116,668,756	130,440,427
Imports (computed real value)	153,385,646	133,329,595	143,059,622

Giving a total value (for exports and imports together) in the past year of more than 273 millions sterling. It will be observed that the imports, though considerably larger in value than last year, have by no means recovered as yet the value assigned to them in 1857. The difference between the value of our imports in 1857 and in the present year will be found in the main to be rather a difference of *price* than of quantity. We have, of many articles, as sugar, imported more in 1859 than in 1857, while paying much less. In the case mentioned, indeed,—that of sugar,—the quantity entered for home consumption has been greater by more than a million and a half hundred-weights, while the money cost has been less by three millions sterling.

Let us now, so far as the Board of Trade Tables permit, give a general view of the trade of this country with France during the past year. With regard even to our exports, the means of doing so are rather scanty, as a considerable portion of the trade consists of petty dealings which are not specially noted in the Board of Trade returns :—

Exports to France from the United Kingdom.

	£
Coals and Culm.....	615,442
Hardwares and Cutlery	93,868
Machinery—Steam Engines	3,974
Other sorts	195,428
Iron—Pig	190,046
Bar, Bolt, and Rod, exclusive of Railway ...	45,621
Railway	28,855
Copper—Unwrought	471,076
Lead—Pig, rolled and sheet	18,022
Silk Manufactures	22,299
Silk—Thrown	308,488
Silk—Twist and Yarn.....	113,989
Spirits—British.....	63,331
Wool—Sheep and Lambs'	428,942
Woollen and Worsted Yarns.....	174,659
	2,774,040
Other articles.....	1,970,063
	4,744,103

It is very remarkable that the enumerated articles exported to France are not only so few in number and so small in value, but that, if we except coal and copper, there is no great English product of which France takes any considerable amount. Not even wool can be said to rank, properly speaking, as an English product, as we are obliged to import ourselves much more than we again export. And silk is of course chiefly an imported article. Of iron, we export a very small modicum to France,—not to be compared in value to what we send to other countries; and of manufactures, as will be seen, the most valuable are completely excluded, and even of "hardware and cutlery" we send less than 100,000*l* worth to that great country.

The imports from France have lately been very nearly treble the value of the exports, but of these the analysis in the Board of Trade Tables is even still more imperfect. The only items classed under the head of France are in 1859 :—

	£
Corn (Wheat).....	2,420,224
Wheatmeal and Flour	1,954,247

To which we may add probably more than a million sterling in brandy,—and a variety of imports of less value, making up our imports from France to something like 13 millions sterling; so that while the total value of our exports and imports is about 273 millions sterling, the trade with France may be worth about 18 millions sterling. Indeed, France is a far worse *customer* of England than even the little community of the Hanse Towns; and even in the opposite capacity as producer and seller, does not send us goods in adequate proportion to her magnificent resources. If, with so many remaining English imposts on her manufactures, France can still send us upwards of 13 millions' worth of goods, while, with most of our products and manufactures absolutely excluded, she can take almost five millions' worth, it is scarcely unnatural to hope that, with a freer trade opened between us, we may soon see even the French exports increase, and the English exports to France attain the level of the French exports:—in fact, see the English trade with France assume something like the proportions of the English trade with the United States.

The Board of Trade returns for January call for no particular remark. The declared value of the exports is 9,366,497*l*, a monthly value below the average, as in the month of January it usually is. The woollen trade seems still on the increase. The exportation of cotton goods to India has apparently fallen off by about half a million's worth as compared with the same month last year. But the variation in shipments from month to month is so great that the returns of a single month indicate very little as to the tendency of the market. The imports have no striking feature.

THE TREATY OF COMMERCE WITH FRANCE.

The following is an additional article to the Treaty of Commerce, concluded at Paris on the 23d of January, 1860, between Her Majesty and the Emperor of the French, signed at Paris on the 25th of February, 1860, and ratifications exchanged at Paris on the 28th of February, 1860 :—

By Article VIII. of the Treaty of Commerce between Her Majesty the Queen of the United Kingdom of Great Britain and Ireland and His Majesty the Emperor of the French, signed at Paris on the 23d of January last, Her Britannic Majesty undertook to recommend to Parliament the admission into the United Kingdom of brandies and spirits imported from France at a duty exactly equal to the Excise duty levied upon home-made spirits, with the addition of a surtax of 2d a gallon, which would make the actual duty payable on French brandies and spirits 8s 2d a gallon. Since the ratification of the said treaty, the Government of Her Britannic Majesty have ascertained that the surtax of 2d a gallon is not sufficient to countervail the charges with which, in consequence of the operation of the laws of Customs and Excise, home-made British spirits have now to contend; and that a surtax limited to the rate of 2d a gallon would still leave home-made British spirits subject to a differential duty in favour of foreign brandies and spirits.

Consequently, the Government of Her Britannic Majesty having represented these circumstances to the Government of His Majesty the Emperor of the French, and His Imperial Majesty having consented that the amount of the said surtax shall be increased, the two high contracting parties to the said Treaty of Commerce do, by the present additional article, agree that the amount of such surtax shall be 5d a gallon, and Her Britannic Majesty engages to recommend to Parliament the admission into the United Kingdom of brandies and spirits imported from France at a duty exactly equal to the Excise duty levied upon home-made spirits, with the addition of a surtax of 5d a gallon.

The present additional article shall have the same force and validity as if it had been inserted in the Treaty of Commerce of the 23d of January last.

It shall be ratified, and the ratifications thereof shall be exchanged at Paris within five days from the date of its signature.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at Paris this 25th day of February, in the year of our Lord 1860.

THE NEW WINE DUTIES.

The House of Commons on Monday night resolved that the annexed duties should come into operation immediately, the resolution being worded as follows :—

1.—That in lieu of the duties and drawbacks of Customs now charged or allowed on the articles undermentioned, the following duties shall be charged thereon, on importation into the United Kingdom, viz. :—

Until the 31st day of March, 1861, inclusive.

		s	d
Wine of and from foreign countries—			
Red	the gallon	3	0
White	—	3	0
Lees of such wine	—	3	0

with an allowance for drawback on exportation until the said 31st day of March, 1861, inclusive, of 3s per gallon on such wine exported or used as ship's stores, but that no drawback be granted

on lees of wine; and with an allowance of drawback to licensed dealers in wine who have complied with the provisions of the minute of the Lords of the Treasury, dated the 7th July, 1843, on the foreign wine which they have had in stock on the 10th February, 1860, on the conditions of the said minute, at the rate of 2s 9d per gallon.

Another resolution thus disposes of the prospective further reduction in the duties.

2.—Resolved, That on and after the 1st day of January, 1861, the following duties shall be charged, viz. :—

	Containing less than the following rates of proof spirit, verified by Sykes' hydrometer, viz.:—								If imported in bottles.	
	18 degs.			26 degs.			40 degs.			
Wine of and from foreign countries—	s	d		s	d		s	d	s	d
Red.....per gal	1	0	...	1	6	...	2	0	... 2	0
White.....	1	0	...	1	6	...	2	0	... 2	0
Lees of such wine.....	1	0	...	1	6	...	2	0	... 2	0
Wine, the growth and produce of any British possession, and imported direct from thence—										
Red.....per gal	1	0	...	1	6	...	2	0	... 2	0
White.....	1	0	...	1	6	...	2	0	... 2	0
Lees of such wine.....	1	0	...	1	6	...	2	0	.. 2	0

* By the second resolution it would appear that the 3s duty will cease at the end of the present year.

Agriculture.

MANURIAL DESTITUTION.

SEWAGE OR TILLAGE?

If we gave credit to the alarming statements of Mr Alderman Mechi and Baron Liebig, we might share in the apprehensions they feel lest the fertility of our soil may be exhausted through the influence of our large cities. But, believing that both the Alderman and Chemist to be panic-stricken on insufficient grounds, we still deem their suggestions to deserve a candid consideration. It is not because enthusiasts make any subject their hobby-horse and ride it to death, that it is safe to infer that their special subject, rationally treated, is not worthy of investigation. Now, the statements made in support of the exhaustion panic amounts to this, that an enormous and increasing amount of the produce of our agricultural districts goes into our large cities and towns, and that under modern sanitary arrangements the excreta of the inhabitants, instead of being deposited in cesspools as formerly, are now drained off into sewers and being conveyed away into the rivers, are lost to agriculture. It cannot be denied that much of the night-soil which, within certain distances of large towns, used to be conveyed to the land, now goes into the town sewage, and, so far, if the sewage cannot be utilised, there is a loss of manure. But, on the other hand, there is no doubt that vastly-increased quantities of animal matters which were formerly wasted, are now preserved and converted into manures. Then, with every increase in the population in the large towns, there is a larger number of horses kept, and the stable manure thus made—and which is always of good quality, the horses of large towns being highly fed—is returned to the agricultural districts, and, by means of railways, over a much wider area than in former times. We believe that in this way considerable, if not complete, compensation is afforded to the rural districts for the loss of the night-soil which improved drainage has removed from the towns by means of sewers. It must be remembered that the horses of towns are now chiefly fed on foreign oats and beans, and these enrich the hay and straw brought from the rural districts when they are returned into the country in the form of stable manure. These considerations, in addition to the facts that farmers are everywhere keeping more live stock on their farms in order to supply the great demand for meat made by the town populations, and the greater care and skill with which they preserve and apply their home-made manures, are quite sufficient to dispel all fears that the fertility of our soils is likely to be exhausted. On the contrary, no one can go about the rural districts with his eyes open without being satisfied that a general and not inconsiderable increase of fertility is taking place,—and that partly from more and better-used manure, and partly from improved tillage and general management.

All this, however, is no reason why every effort should not be made to render sewage available for agricultural purposes. There are, however, practical difficulties in so doing, which have hitherto proved insuperable. One of these difficulties consists of the immense bulk of water which town sewage contains in comparison with the manurial substances which are held in solution. To convey this sewage to any distance requires an amount of expenditure far beyond the value of the sewage as manure. So all attempts to extract and separate the manure from the water have proved to be too expensive. In short, hitherto, whatever may be the chemical value of sewage, it cannot be made to pay for the cost of conveying it to the rural districts. Whether the towns can, with a view to their own sanitary purposes, so manage and manipulate their sewage as to render it available for agriculture, is a problem yet to be solved; but the resistance of the neighbouring landowners to the pollution of their streams has rendered efforts of that sort in some places matters of necessity. At present, the most feasible mode of utilising town sewage is to convey it, by natural gravitation, to meadows laid out for irrigation. This, however, depends partly on situation, and involves much expense in preparing the meadows. The examples of the Edinburgh water meadows, and the Duke of Portland's Clipstone meadows below Mansfield, in Nottinghamshire, are favourable to such operations.

Mr Mechi and Liebig both refer to the decay of fertility in the East from the neglect of irrigation, and Liebig in particular mentions the great population once maintained in Assyria and Mesopotamia through an admirable system of irrigation now gone to decay. But they forget that in the climates of those regions water alone is essential to fertility. We learn from Mr W. Bullock Webster, who is carrying on vast agricultural operations in Egypt, that where he can command water for irrigation he can always insure abundant fertility; and he is at present in this country making arrangements for taking out powerful machinery and steam power to raise water for irrigating purposes.

In his recent lecture at the Farmers' Club, Mr Mechi speaks slightingly of those "who console themselves [under the apprehensions Mr Mechi would excite] with the new source of fertility developed by deeper, cheaper, and more perfect cultivation by steam power," and asks, "Does not every farmer know that the poor (because undisturbed) subsoil demands immediate and abundant supplies of manure?" But that is a misapprehension or a misstatement of the reasoning he refers to. Every farmer knows well enough that when he ploughs deep he must give his land a good dressing, and the improving farmer takes care to deepen his soil when preparing for his fallow crop, and when he is in a position to lay on a large quantity of manure. Moreover, he deepens his staple gradually, and by this process, though he may require to apply a larger dressing to his fallow crops than he did under a system of shallow cultivation, he finds that during the whole rotation larger quantities of grain can be grown with a smaller proportion of manure.

Now, in contrast with the panic fears of exhausted fertility from the loss of some of the night-soil of towns, we have, in an edition of Jethro Tull's works by Mr Alexander Burnett, a vigorous assertion of the principle of "Tillage a substitute for manure," which Tull first announced, and Mr Smith, of Lois Weedon, has of late so energetically supported. In his preface, Mr Burnett refers to the "fact that on a single acre of good dry land, valued at 2*l* of rent, including tithe, the Rev. Samuel Smith, of Lois Weedon, Northamptonshire, has grown twelve successive crops of wheat without the application to the soil of any manure whatever," and that "neither degeneration of quality, nor diminution of quantity, in the yearly produce," has been the result. The average of 34 bushels to the acre, at the cost of 6*l* per acre, testifies that tillage without manure will grow wheat. Mr Burnett also tells us that this is the same principle on which "Jethro Tull, the inventor of the system, before his death in 1741, had grown thirteen unmanured crops of corn, without intermission and without decrease, in one and the same ground; and in the latter years of his practice, tilled in the same method no less than 120 acres of wheat of a season—with this immense practical superiority over the majority of amateur experiments of the present day, namely, the use of the plough for inverting the soil, and not of the spade or fork as in them."

The conclusion at which the writer arrives, and he supports his views by ample details of Tull's and the Lois Weedon systems, is, "that corn can profitably be grown without the stimulus of manure, and hence that the manurial products of the homestead may be exclusively and more advantageously distributed on the permanent grass fields." In his introductory chapter he says he believes that he has adduced "ample testimony to prove that, anterior to the engrafting fallow cattle crops on the husbandry of England, *pure* cereal tillage prospered abundantly under circumstances infinitely less favourable to its success than those of the present day." Now, without acceding to Mr Burnett's view that tillage alone may be substituted for manure to our corn crops, we can refer the reader to his very interesting work, in order to see how important an element tillage is in the growth of cereals, and as an antidote to the exaggerated view taken by Liebig and Mr Mechi of the loss agriculture will sustain by the drainage of our towns.

GAME AND THE GAME LAWS.

The point of view in which we commonly present the evils arising from game and the game laws is the strictly economical one, namely, as an obstruction, directly and indirectly, to the progress of British agriculture. But there is another aspect of this subject, which, though primarily a moral one, is also in a secondary degree economical. We refer to the pernicious influence exercised by game preservation and the game laws upon the morals, the comfort, and the independence of the labouring classes in our rural districts.

That the origin of nine-tenths of the actual crime of those districts is the game law, no one who is well acquainted with them and who is not interested in game-preserving will venture to deny. From the pressure of occasional want of work, from the love of the sport of chasing or killing wild animals, from idleness and fun, or even from the temptation of bagging in one night so many wild creatures as will produce more money than a month's steady labour, young men of the labouring classes become poachers, and are then marked men. Squire and parson denounce them, and the farmers are unwilling, or perchance afraid, to employ men whom the notables of the vicinage look askant upon. Or, if employed at all, it is only for odd jobs or in times when farm-work presses. Besides, poaching leads labouring men to be out at night, and into other irregularities which really render them less steady and effective as workmen than those to whom game animals offer no temptation. It needs no great foresight to predict that men so situated will often become more seriously criminal. Ostracised for catching a hare, and deprived of their share of the ordinary work of the neighbourhood, they are almost of necessity driven to criminal courses.

But the numbers who undergo the demoralising influences of a gaol for breaches of the game laws—laws which instinct and intelligence alike feel to be unjust—are lamentably large. Thus it appears, from a recent return presented to the House of Commons, that during the year ended the 30th of June, 1859, 2,341 persons were committed to prison in England and Wales for game-law-made offences! And amongst this mass of needless suffering how many offenders are there who can scarcely be called offenders at all. What misery must be inflicted on the families and connections of the convicted. What an amount of heart-burning arises from the evils inflicted on the poor to protect the sports—the effeminate and unmanly sports of the rich. Surely such things are not wisely or well done in these times. What is the crime for which many of these 2,341 game-law-made criminals are incarcerated in the common gaol? A Wiltshire paper of last week contains accounts of two cases which let in a little light on the subject:—

Two labouring men, Samuel Dowse and Henry Wise, were charged at the Devizes District Petty Sessions, by the gamekeeper to Mr Watson Taylor, with having trespassed upon that gentleman's land in pursuit of game. Only one witness supported the accusation, and his evidence was of the vaguest description. He simply stated that he had seen them in the locality alleged, one carrying a stick, and the other a gun, but he could not say whether the gun was loaded, and of the man who had the stick he confined himself to averring that he "looked as if he was beating for game." The defence was clear and consistent; the prisoners stated that, there being a large flight of wood pigeons about the place, they had gone out in pursuit of them, and that one, which they had shot, having fallen upon Mr Watson Taylor's land, they had gone to pick it up when they were accosted by the witness for the prosecution, to whom they showed the pigeon, offering to allow him to search them if he pleased, to satisfy himself that they had nothing else. This statement was not contradicted in any point, and it further appeared that neither of the men had ever been brought up before on a similar charge.

Did the justices discharge them? Oh, no; they called upon the two men to pay 6s 6d each, the amount of the costs, and, being unable to pay, they were committed to prison for three weeks! At the same time and place, Richard Howell, a tailor, who, while shooting some small birds, accidentally shot a partridge, was fined 1s and 9s costs for the chance-medley slaughter of the sacred bird of game. Can anything be more vexatious than laws under which such justice is administered? Can anything be more petty or more irritating to the rural population? While rural labour is becoming scarce, the owners of land seem bent on driving from their farms as many as possible of the stalwart peasants by whose labour the land should be made productive. But their pheasants and hares feed undisturbed till the next battue.

Literature.

DISSERTATIONS AND DISCUSSIONS, POLITICAL, PHILOSOPHICAL, AND HISTORICAL. Reprinted chiefly from the "Edinburgh and Westminster Reviews." By JOHN STUART MILL. 2 Vols. London: J. W. Parker and Son. 1859.

"Exclusive of the abstract sciences," says Coleridge, in his "Aids to Reflection," "the largest and worthiest portion of our knowledge consists of *aphorisms*." The fragment on "Aphorisms" which Mr Mill has reprinted in the first volume of his "Dissertations," whether suggested or not by this remark, is, in substance, little more than an expansion of it. "There are two kinds of wisdom.....The first is the wisdom which depends on long chains of reasoning, a comprehensive survey of the whole of a great subject at once, or complicated and subtle processes of metaphysical analysis: this is, properly, philosophy. The other is that acquired by the experience of life, and a good use of the opportunities possessed by all who have mingled much with the world, or who have a large share of human nature in their own breasts .....The form in which this kind of wisdom most naturally embodies itself is that of aphorisms; and such, from the time of Solomon to our own day, is the shape it has oftenest assumed." There can be little difficulty in determining to which of the two classes of "wise men" thus described Mr Mill himself belongs. He is essentially the philosopher, the systematic thinker, rather than the sage, the man of practical or intuitive moral wisdom. Few of those epigrammatic maxims and apophthegms which constitute perhaps the most valuable part of the writings of Pascal and Goethe, of Coleridge and Carlyle, could be selected from his works. Scarcely any profound truth, embodied in felicitious metaphor or illumined by a flash of wit, remains with you as a permanent possession, when you lay down his books. Mr Mill's strength does not lie so much in the discovery of new, or in the revival of neglected and forgotten truth, as in his power of combining and co-ordinating acknowledged truths into a systematic whole. His mind is essentially constructive. It works on the materials provided for it by previous thinkers, less cautious, sober, and comprehensive, but more penetrating and profound. Mr Mill correctly, though perhaps unconsciously, indicates the characteristic of his genius, when speaking of his book on "Logic," he rests "its claim to attention.....on the fact that it is an attempt, not to supersede, but to embody or systematise, the best ideas which have been either promulgated on its subject by speculative writers, or conformed to by accurate thinkers in their scientific inquiries;" and asserts for it no other originality than is involved in the effort "to cement together the detached fragments of a subject never yet treated as a whole, [and] to harmonise the true portions of discordant theories, by supplying the links of thought necessary to connect them, and by disentangling them from the errors with which they are always more or less interwoven." It is obvious, from these considerations, that Mr Mill's mind is one that requires for its proper nutriment and field of exercise an age and people of advanced scientific knowledge and intellectual culture. He would scarcely have attained his deserved eminence in those ruder periods, in which the eager and undisciplined passion for discovery had no other guide than instinct, and no prompter but impulse. Instead of acting as the pioneer to new and yet unvisited regions of truth, Mr Mill's task, determined by choice and by natural endowment, has been to develop to their utmost the resources of the truths we possess. In this power of exhaustive and systematic elaboration, and in the faculty of disentangling and symmetrically re-arranging for lucid exposition, every element of a complicated subject, we do not know of any contemporary English writer who at all approaches him. Whether the gifts which Mr Mill eminently possesses, or those in which he is comparatively deficient, are of the higher order and value, is a question which it is by no means necessary to discuss. Mr Mill's disciples would no doubt claim for him the first place among contemporary thinkers; and those who would dispute his title to this position, would not question his right to a high place in the very first rank of the philosophers of this, or of any period of English speculative history.

The qualities which we have attributed to Mr Mill find their proper scope in the complete treatise rather than in the episodical essay. Accordingly no one, we think, judging of him from the volumes before us, would recognise the powers of mind which are displayed in the "System of Logic" and the "Principles of Political Economy," and which have made each of those works an era in the sciences of which they respectively treat, and given them a high place among the *opera magna*, accomplished as well as designed, in this age of magazines and reviews, and light fragmentary literature. On the other hand, those who come to the "Dissertations and Discussions," either with a knowledge of the two great works to which we have referred, or only with a knowledge of the reputation they have gained for their author, will, we think, be inevitably, though unreasonably, disappointed. Mr Mill's qualities of mind and style are not those which make the attractive essayist. There is little of that *vivida vis animi*, that play of imagination and wit, or of those penetrating appeals to the deeper human feelings, which refresh and stir the reader of Macaulay and Sydney Smith, Carlyle and Martineau. There is not even the concentrated force which, by necessitating close attention, gives interest to the driest scholastic and metaphysical disquisitions of Sir William Hamilton. *Nervi deficiunt animique.* The lengthened exposition, and the careful conscientiousness of explanation, which sometimes needlessly increase the bulk of Mr Mill's larger treatises, —though the fault there is but the exaggeration of a virtue,—are less in place in an essay, which scarcely affords room for more than the statement of results, and the indication of the processes by which those results have been attained. Mr Mill's studies of French writers have no doubt tended to augment his natural gift of clear statement and reasoning. But he has learned from them nothing of that epigrammatic point and brevity which marks almost every French style. On the contrary, his freedom from the obscurity of the Germans is balanced by no small amount of what the Germans expressively call *Langweiligkeit*. Even as regards the matter of Mr Mill's "Dissertations and Discussions," they contain little which has not been said more completely in one or other of his separate works. The reviews of the historical works of Michelet, Guizot, and Grote, are chiefly remarkable for the doctrine of the purpose and method of historic research, which is more fully expounded in the "Logic of the Moral Sciences." The essay on "Civilisation," and the review of De Tocqueville's "Democracy in America," contain the same protest against the tyranny of society over individuals, to which Mr Mill has given more recent utterance in his volume "On Liberty." The review of Mr Helps' "Claims of Labour" touches almost exclusively on subjects since

more maturely considered in several chapters of the "Principles of Political Economy." Some, indeed, of the papers which we have named, and others included in these two volumes, are less original discussions of the subjects, to which they refer, than reviews of books upon those subjects, with the ordinary amount of incidental extract and comment. Others, as the essays on "Bentham," "Coleridge," "Civilisation," and "Berkeley's Theory of Vision," correspond more strictly with the promise of Mr Mill's title-page, being independent "Discussions and Dissertations." On the whole, the chief interest attaching to these volumes is reflected on them from the previous reputation and the greater works of the author. Unlike Carlyle and Macaulay, and others of his contemporaries, who owe the origin and the largest or perhaps the best founded portion of their fame to their contributions to periodical literature, Mr Mill's reputation does not date from the first appearance, and will not be increased by the republication, of his miscellaneous papers.

The variety of topics embraced in Mr Mill's essays renders anything like a systematic review of them out of the question. It shows, however, the conscientious care with which the author has sought for light, in the most opposite departments of literature and speculation, on the main subjects of his inquiry,—the political and economical sciences, and the doctrine of scientific method. The affiliation which connects the most dissimilar branches of knowledge renders it impossible to know any one thoroughly without knowing something of all the rest. To Mr Mill's comprehensive curiosity nothing seems foreign. The politics of ancient Greece and of modern France, the utilitarian philosophy and the nature of poetry, Berkeley's Theory of Vision, and the poems and romances of Alfred de Vigny, the currency and the importance of fictitious narrative as an instrument of education, are a few among the themes on which he dwells. What is characteristic, however, of his mind and doctrines may be found, as we have before hinted, better exemplified in various portions of his more systematic writings.

It is curious that, belonging to a generation which has been more than any of its predecessors under the influence of German doctrines and modes of thought, there should be absolutely no trace of any such influence in the volumes before us. Coleridge, whose anti-Gallican feeling was almost as strong as that of Burke, once, we believe, publicly thanked God that he did know French,—to which circumstance alone Sir W. Hamilton attributes the absence in his writings of plagiarisms from French authors. Mr Mill, without the same excuse, has apparently as little sympathy for German writers. In fact, in the minds of the two great thinkers in question, the literature and philosophy of France and Germany change places, so far as the relative estimate formed of them is concerned. If Coleridge preferred the mystic transcendentalism of German thinkers to the practical common sense of the English, Mr Mill appears to rank the clear, precise, system-framing habit of the French above the same quality. While there is not in the volumes before us a single essay, scarcely a single allusion, to any topic of German speculation, literature, or politics, the men and events of France are copiously noticed and warmly appreciated. The two Revolutions of 1788 and 1848 are estimated and vindicated; and a tribute is paid to the genius and researches, among others, of Armand-Carrel, Michelet, and Guizot. Mr Mill's interest in the French thinkers is no doubt in part due to those peculiarities of mental character which give him affinity with many of the finest qualities of French genius. But they are partly due to special circumstances. The school of speculation in which he was educated has, both in its fundamental principles and in its special doctrines, much in common with the French philosophy of the eighteenth century. His youth was contemporary with the glorious revival of French letters during the later years of the Restoration, and his early manhood with the Revolution of 1830, and the attempt to found a free constitutional monarchy, apart from legitimist influences and theories of divine right. The hereditary radicalism of Mr Mill, and the political condition of England at the time, disposed him to sympathise with these efforts. There are many indications in these volumes, not only of his intimate knowlege of French politics, but of his personal acquaintance with the leading French politicians of Louis Philippe's reign. And the generous vindication of the members of the Provisional Government during the French Revolution of 1848, written at a time when his own opinions had far diverged from the ultra-democratic views of that body, show personal sympathy surviving the growth of political differences. Mr Mill's apparent distaste for German literature and thought forms so striking an exception to the many-sided culture and catholic appreciation which generally characterises him, that we thought it worth adverting to. On the other hand, his excessive admiration for almost everything French,—from the artisans of Paris—"the most intelligent and best conducted labouring class, take it for all in all, to be found on the earth's surface,"—to the higher productions of "the French mind, the most active national mind in Europe,"—is so prominent as to deserve briefly recording. For reasons already stated, we abstain from special criticism on the contents of these volumes. Any sufficient attempt at more general appreciation would lead us far beyond our limits. We have, therefore, confined ourselves to the somewhat disjointed and very incomplete suggestions already thrown out.

RURAL LIFE IN BENGAL: Illustrative of Anglo-Indian Suburban Life; more particularly in Connection with the Planter and Peasantry, the Varied Produce of the Soil and Seasons; with Copious Details of the Culture and Manufacture of Indigo. Letters from an Artist in India to his Sisters in England. By the Author of "Anglo-Indian Domestic Life," "Rough Notes of a Rough Trip to Rangoon," &c. Illustrated with One Hundred and Sixty-six Engravings. London: W. Thacker and Co., 87 Newgate street; W. H. Allen and Co., Leadenhall street. Calcutta: Thacker, Spink, and Co. Bombay: Thacker, Vining, and Co. 1860.

[FIRST NOTICE.]

We think we may say without hesitation that this is by far the most successful attempt yet made to bring the rural life of Lower Bengal home to the mind and the eye of the English public. The beautiful little wood-cuts far surpass anything we have yet seen, in their faithful representation of the country, the homes, the crops, and the personal appearance of the Bengal peasantry. The artist's descriptions of what he saw and heard, conveyed in a series of letters to his sisters, are just what an aimable and observant man would write to well-educated women,—and his style is very graceful and pleasing. As regards the accuracy of his statements in regard to great social and political questions, we shall proceed to speak presently: we shall only say now that they are as accurate and fair as we could expect, considering the writer's limited opportunities of forming a correct opinion and the particular circumstances under which he obtained his information. Not having any personal knowledge of the interior of the country, he accepted an invitation from an indigo planter living about fifty miles from Calcutta to go up from the metropolis and pay him a visit. This he did, and performing the greater part of his journey by the river Hooghly, he has taken the opportunity of describing the various places of interest on the way, Indian modes of conveyance, native river craft, &c. But the main part of the book relates to life at an indigo factory,—the lands and the people attached to it, indigo cultivation, and the general condition of the people as affected by the establishment of these factories. For information upon these points, the writer of the book before us was necessarily obliged to rely mainly on the information received from his host. Of course, then, he heard but one side of a question about which there is the greatest diversity of opinion, and about which every Anglo-Indian is an intense partisan. Our author knows this, and is very anxious to write impartially; but, under the circumstances, we do not see how he could hope to do so. The difficulty of forming a true opinion was enhanced rather than diminished by the fact of his host (whose initials are given and the name of the factory in full) being emphatically the "model planter" of Bengal. We happen to know well the character of the gentleman thus indicated. A man of great intelligence and ardent philanthropy,—he has constantly exerted the immense power which belongs to such a position as his for the physical and moral well-being of the 200,000 souls over whom his "rule" may be said to extend. But it would be as absurd to take such a man as an example of what planters generally are, as to describe Howard as an average specimen of the "old English gentleman" a hundred years ago. Moreover, his very kindness of heart and a natural generosity towards his brother planters would indispose such a man to represent the happy state of things prevailing in his own estates as exceptional. Especially from such a *chevalier de plume* as his guest, would he rather be anxious to veil the misdoings which we hear of in connection with indigo factories. As the book before us is, from its attractive form and character, likely to be very popular, we feel bound in the interests of truth and on behalf of the unhappy peasantry of Bengal, to protest against the statements it contains regarding the great ease of Planter *versus* Ryot. The book is obviously written with the fairest and most honourable intentions, but we cannot but look upon it as putting forth views which are far more favourable to the planter than are justified by the facts.

This, however, does not diminish the interest with which we have read the account which is given of the good deeds of the master of Malnath Factory. It shows how extensive are the opportunities which a planter enjoys of benefiting those around him, however much evil may necessarily and irremediably accompany that position in the present condition of the Bengal peasantry. The following remarks are good:—

> Truly, considering the position of a planter, I do not know of any, indeed, upon which a greater amount of responsibility rests, or wherein so vast an amount of good and evil are in the dispensative power of a single individual,—making him, in short, a blessing or a curse to the land, and the multitudes of people by whom he is surrounded. It is not that he can perform miracles. It is not that by magic he can elevate the condition, or transform in an instant the whole character of the people about him. None better knows than does a planter what favouring showers—what genial suns—what care—what choice of soil—what weeding, and what watchfulness are needed to bring to fruitful maturity one grain of that seed on which his hopes depend. Are the human and uncultured mind and heart more pliant than a grain of indigo? The mission of the European to India was not *to find* a highly-principled, educated, and enlightened people, but to aid in *making* them so. It is not that by any immediate act of his he can confer judgment, or honesty, or truthfulness, but that by his own strict and consistent example of honourable and generous conduct, and his superior intelligence, he will acquire and exercise that in-

fluence over the minds of the thousands around him which, though it may not *beget* principle, at least discourages the abuse of it, and by practical results convinces them that "honesty is the best policy," and ignorance the mother of want. The Supreme Government itself exercises not a hundredth part of that influence over the conduct and happiness of the poor of this land that is in the power of an indigo planter.

The sketch which is given of the ordinary features of a planter's life is such as to tempt many a young man at home to try his fortune in this direction. The healthful, active occupation—the out-of-door life—the comfortable houses, with farm-yards and gardens—the abundance of servants and horses,—must all leave a pleasant impression on the reader's mind. But there are many drawbacks: there must be a limit at which the production of such an article as indigo ceases to be profitable; while the difficulty of obtaining land, and the opposition of the natives, both ryots and zemindars, to the cultivation of this crop, leads to constant irritation and ill-feeling, law suits or agrarian outrages.

To understand clearly the various aspects of the great question which this book brings up,—viz., whether the relations between the indigo planters and the native population are fraught with good or evil,—our readers must bear in mind the following facts. The European indigo planter is not literally a *planter* at all. He is a manufacturer of indigo, who builds his works in the neighbourhood of lands suitable for its cultivation, and makes advances to the tenants holding those lands to induce them to grow and supply him with the plant in question. Sometimes he does this on his own account, either with capital of his own or with capital borrowed at a very high rate of interest. Sometimes he is merely the agent of a mercantile house in Calcutta which advances the necessary funds. In either case, it is a great object with him to secure from the zemindar a long lease of the lands where the indigo is to be sown, because then he can exercise over the tenants the great powers possessed by the zemindar himself. Wielding these, he compels the ryots to enter into an engagement to grow indigo for his factory, and advances money to them, according to the quantity of land which each holds suitable in the planter's opinion for the growth of indigo. There is overwhelming evidence that the ryots are most averse to enter into such engagements, and we cannot wonder at it. The fact is confirmed by the evidence of a very able and experienced officer of the Indian Government. We refer to Mr Sconce, a judge in the Sudder or Chief Court of Appeal at Calcutta, and a man of known moderation and candour. From a report which he made to the Government on this subject, as well as from other sources, the aversion which the ryots feel to these indigo engagements appears to arise from the following circumstances. In the first place, the cultivation of this crop is most precarious in its results, and entails a loss upon the cultivator, so that sooner or later the planters' advances become an irredeemable burden. "It is admitted that planters cannot cultivate indigo *by hired labourers. They cannot make it pay.*" They, therefore, adopt the plan of throwing the whole risk upon the ryot. They force him to take an advance of four shillings a *beegah*,* and a *beegah* will produce, on the average, about ten bundles of plant. For every ten bundles delivered, the ryot receives credit for four shillings. It will be seen from this that nothing is left to pay either for the rent of his land, the price of the seed, his labour, or the wear and tear of his cattle and ploughs! To make the matter worse, he does not really get the full amount of the advance debited against him, for, before it reaches him, the money must pass through the hands of the planters' native subordidates, who invariably keep back a portion, sometimes *one-half or even more.* This practice is even admitted by the writer of the book before us, and receives from him hearty condemnation. It might seem difficult to imagine how the ryot lives at all. He does so chiefly by constant borrowing, and the whole of the rural population are in a state of hopeless bankruptcy, their creditors being the village money-lenders,—and the planters in addition, wherever factories are established. If the ryot cannot buy his indigo seed, the planter supplies him and debits him with the amount. He makes up his rent and other charges as well as he can by the profits from his rice and oil-seed crops. Mr Sconce says:—

I do not know to what extent the advance consists, partly of cash, and partly of unliquidated balances of past years. I have seen cases in which the advance expressed in a renewed contract consisted wholly *of the balance of an account.*

How, then, it will be asked, does it happen that they ever enter into such ruinous engagements? Because, in the first place, any one who possesses proprietary rights in Bengal can intimidate the peasantry to any extent; and secondly, because these advances are often forced upon them at the fall of the year when they are in want of ready money and cannot withstand the temptation. The advance once taken, the ryot can never get out of the planters' books, and he is, therefore, obliged to grow indigo from that time forth so long as the factory exists. As to the charge against the planters of resorting to oppression to compel the ryots to enter into these engagements, home readers will be probably incredulous; and we will, therefore, on this point take the evidence of thoroughly impartial witnesses, viz., of two missionaries who have resided in the very district which our artist visited. The Rev. F. Schurr says as follows:—

The planter holding a talook, considers himself entitled by his zemindarry rights to force every ryot to sow indigo on any of his lands and to any amount.....If a ryot refuses, lattials (club-men) are sent, numberless as locusts, and his cattle are impounded and carried to the factory, or the factory ploughs are sent, and the ryot's recently sown rice is ploughed up, and indigo sown by force.

The Rev. C. H. Blumhardt says:—

In favourable seasons, the underlings get the ryot's profits; in a bad season, the ryot does not get paid his expenses. There is much oppression by planters in seizing their ploughs and bullocks.

No wonder that with such practical illustrations of Christian faith at hand, the missionary finds it somewhat hard to command attention to its claims.

* Two-thirds of an acre.

The Cornhill Magazine. No. 3. March. Smith, Elder, and Co.

Mr Thackeray tells us in his "Roundabout Paper," in this number, that he once sat by a lady in America, who said to him at the close of dinner, "'Mr Roundabout, I was told I should not like you; and I don't.' 'Well ma'am,' say I, in a tone of the most unfeigned simplicity, 'I don't care.'" And, Mr Thackeray adds, that "we became good friends immediately, and esteemed each other ever after." We fear a like expression of feeling towards the "Cornhill Magazine" would scarcely produce the like results between this substantial journal and that entertaining periodical. Otherwise we could make the same remark, with quite as much truthfulness and accuracy, probably, as the American lady. No one can deny that the "Cornhill Magazine" is full of entertaining matter, which is, we suppose, all that is aimed at. But we must say the reader is apt to feel some ennui at the undiluted drawing-room atmosphere he is obliged to breathe. Mr Thackeray's tales never take you out of it for a moment; Mr Trollope's never. From Barchester to Putney it is all the same. One positively longs for some delineations of life which go into regions a little more practical and manly.

This third number is, perhaps, the most amusing of any. Mr Thackeray is more lively than he has yet been, Mr Trollope not less so,—and they have apparently enlisted the aid of Mr Ruskin, whose eloquent, but somewhat forced earnestness, is in curious contrast to the studied lightness of his collaborateurs. The following striking passage in his essay on "Sir Joshua and Holbein," contrasting the ideal which Sir Joshua and Gainsborough alone cared to aim at with the ideal of such an artist as Holbein, might almost seem intended to reflect by allusion on the artistic aims of such writers as Thackery and Trollope, when you compare them either with the more solid and masculine work of Scott, or the still more spiritual art of which, in the realm of fiction, we have as yet no true representative. Mr Ruskin,—if it is he,—speaks thus of Sir Joshua and Gainsborough:—

While we acknowledge the discretion and simple-heartedness of these men, honouring them for both; and the more when we compare their tranquil powers with the hot egotism and hollow ambition of their inferiors,—we have to remember, on the other hand, that the measure they thus set to their aims was, if a just, yet a narrow one; that amiable discretion is not the highest virtue, nor to please the frivolous, the best success. There is probably some strange weakness in the painter, and some fatal error in the age, when in thinking over the examples of their greatest work, for some type of culminating loveliness or veracity, we remember no expression either of religion or heroism, and instead of reverently naming a Madonna di San Sisto, can only whisper, modestly, "Mrs Pelham feeding chickens."

We would say to Mr Thackeray and Mr Trollope, "De vobis fabula narratur." Miss Brontë, with her limited experience, had far more of the earnest enthusiasm of art than either of these gifted gentlemen.

Macmillan's Magazine. No. V. March.

This magazine runs a very equal race with its Cornhill rival. This number is very good, and full of variety as well as capacity. "Tom Brown at Oxford" is still the attraction of the magazine. The new chapters are written with a breadth and force which recalls college days most vividly to the mind even of those who do not associate college days with the Cherwell or the scenery of Oxford. These chapters contain some of the best specimens of the author's power.

The paper on the "Revivals," by the Rev. J. Llewellyn Davies, is also admirable; and Mr Ludlow's essay on Savoy and the Idea of Nationality most vigorous and timely. The verses on "Goethe and Frederika" are not very good.

Seven Tales by Seven Authors. Edited by Frank E. Smedley. Arthur Hall, Virtue, and Co., Paternoster row.

This little book originated in a charitable endeavour. Seven writers, G. P. R. James, Miss Smedley, Mrs Banbury, Miss Pardoe, Mrs S. C. Hall, Martin Farquhar Tupper, and the editor united to assist a fellow authoress under temporary distress. The success that has rewarded their plan, and that has called out a second edition of these tales, testifies to their merits. They are slight, but pleasantly written, entertaining, and, with one exception, new.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The Emperor has this day opened the annual session of the Legislative Body with a speech which, it may be feared, will tend to increase the already serious complications in Europe. His Majesty, in fact, makes known that he opposes the projected annexation of Tuscany to Sardinia; that he is "in principle" for the temporal power of the Pope; and that he "claims" Savoy. These three points can hardly fail, it may be thought, to create clamour and agitation both in Italy and Europe. Nevertheless, His Majesty says that he "sincerely wishes for peace, and will neglect nothing to maintain it," and that the moment seems to him to have arrived "to inaugurate boldly in France a new era of peace." His Majesty speaks at some length of the commercial reforms he is about to adopt and of the Treaty of Commerce with England. He justifies the Treaty on the ground that France and England could not have failed for their own sakes to make in the course of a few years modifications in those parts of their tariffs which are hostile to each other; and that it is advantageous to make them at once and in conjunction. He calls on the Legislature to aid him by adopting the bills which will be necessary for carrying the projected reforms into effect; and he announces that, though the abolition of duties on raw materials, and the reduction of those on articles of general consumption will seriously diminish the resources of the Treasury, neither loans nor new taxes will be necessary.

As was to be expected, the Prohibitionists and Protectionists of the Legislative Body have come up to Paris in anything but a favourable disposition to the coming tariff reforms; and they talk boldly of opposing them as much as they can. But, as you are already aware, the Treaty with England will not be submitted to them at all; and the Government, by a proper display of firmness, will doubtless be able to pass all the other measures for which, under the constitution, legislative sanction is necessary.

An agricultural journal complains that, in the impending commercial reforms, nothing has been done with respect to guano, of which French agriculture has pressing need. Imported by French vessels from America this article is free, but imported by foreign vessels it pays not less than 36f a ton. Either from the repugnance of French shipowners to set apart their vessels to the conveyance of that commodity, or to the dear freights they charge, very little guano is imported by French vessels; and, consequently, agriculture has to pay 36f the ton for nearly all it consumes. This is a case in which the removal of the differential duty in favour of French shipping would be of vast advantage to agriculture, and would do no injury whatever to shipping itself.

Although about to admit English coal at a moderate duty, the French Government intends to make energetic efforts to develop as widely as possible the consumption of French coal. In a report to the Emperor just published, the Minister of Agriculture and Commerce shows that the great cause of the dearness of French coal to consumers is the cost of conveying it from the pits to the places where consumed;—in 1850, for example, coal which at the mouth of the pit could be had for 0.933f the quintal (2 cwts), cost consumers 2f; and in 1857, whilst the charge at the pit's mouth was 1.253f, the cost to the consumer was 2.536f the quintal. The Minister, in fact, calculates that in 1857 the consumers paid for the conveyance alone of French coal not less than 160,000,000f. To remedy this state of things, he proposes to construct, with all possible speed, roads and railways, and to improve the navigation of canals and rivers; also to make tramways direct from the pits to the great lines of railway; and, moreover, he states that he is endeavouring to obtain from the railway companies a reduction of the tariffs on coal. All this is laudable enough; but if English coal is, to be imported on the vast scale which some persons anticipate, the utility of it may he questioned. In the course of his report the Minister states that 62 coal-fields exist in France, but that "upwards of one-half of them" are, from their small extent, or the cost of working them, or their situation in hilly districts, unable to send their coal to any but the very nearest markets. The report mentions that the total production of coal in France in 1857 was 79,000,000 quintals (7,900,000 tons); and that 22,426,000 were produced by the Loire fields, 19,600,000 by the Valenciennes, 7,540,000 by the Alais, 5,806,000 by the Blanzy, 4,845,000 by the Commentry, and 4,635,000 by the Aubin. It says, too, that at Ahun, department of the Creuse, and La Sarre, department of the Moselle, are pits which, if properly worked, are capable of supplying considerable quantities of coal.

A rumour is current that the Credit Mobilier is about to be transformed into a "General Railway Bank," to be charged with all the financial affairs of the different companies, and especially with the raising of money by the issue of bonds—such bonds to be uniform for all companies. But I do not guarantee the truth of this.

Another report of the same Minister proposes that, in accordance with the Emperor's wishes expressed in his letter to the Minister of State in January last, the sum of 100,000,000f, part of the undisbursed portion of the last loan of 500,000,000f, shall be spent in various works of public utility; namely, 15,000,000f in the making and repair of roads and bridges, 42,000,000f in the improvement of the navigation of rivers and canals, 35,000,000f in the amelioration of commercial ports and lighthouses, and 8,000,000f in agricultural works. These 100,000,000f are to be spread over three years, and are to be, in addition to a sum of 60,000,000f for the same operations, inscribed in the ordinary budget. The Government also proposes to disburse upwards of 6,000,000f, but not all in the present year, for various public works in Algeria.

The Government has published the following return respecting railways in 1859 and 1858:—

Names of Railways.	Length. 1859. Total Worked.	Length. 1859. Average Worked.	Length. 1858. Total Worked.	Length. 1858. Average Worked.	Total Receipts. 1859.	Total Receipts. 1858.	Difference—Increase. 1859.	Difference—Increase. 1858.	Per Kilometre. Total Receipts. 1859.	Per Kilometre. Total Receipts. 1858.	Per Kilometre. Difference between 1859 and 1858. Total. Plus.	Per Kilometre. Difference between 1859 and 1858. Total. Minus.	Per Kilometre. Difference between 1859 and 1858. Per cent. Plus.	Per Kilometre. Difference between 1859 and 1858. Per cent. Minus.

Subjoined is an account of the markets:—

FLOUR, at *Paris*, during the past week has not been very active, and yesterday prices were the same as on the preceding Wednesday—53f to 58f the sack of 159 kilogs. The four marks were done at 56f and 56f 25c for March, and 57f to 57f 25c for April.

WHEAT, at *Paris*, was not active, and buyers wanted a reduction in prices. Quotations were 31f to 31f 50c the sack of 120 kilogs for good sorts; 32f to 32f 50c choice; and ordinary, 30f to 30f 50c. Of the provincial markets, 79 present a fall of from 15c to 1f 25c the hectolitre, 20 a rise of from 9c to 60c, and 34 underwent no change.

COTTON.—At *Havre*, in the week ending Friday, the sales were 5,857 bales, and the arrivals 19,081. The brokers left quotations unchanged; low New Orleans being 100f the 50 kilogs, and very ordinary ditto 106f. But in the inferior sorts operations at reduced prices might, according to private letters, have been effected. The market has been calm this week, and yesterday low New Orleans was at 99f.

COFFEE.—The sales at *Havre*, in the week ending Friday, were 30 sacks Hayti disposable, 76f the 50 kilogs in bond; 4,400 sacks Port-au-Prince for delivery, 73f 50c to 74f; 2,950 sacks Gonaives, expected, 76f; and 106 sacks Rio, washed, 80f. Some lots of damaged were also sold. The arrivals were about 7,500 sacks. This week business has not been active: quotations have been, Hayti, 75f and 75f 50c; Cape, 76f 50c; Gonaives, 76f; Rio, washed, 75f to 78f. At *Bordeaux*, last week, business was calm: 800 sacks Java were sold at prices kept secret, 450 sacks triage at 115f the 50 kilogs duty paid. This week some lots of Java and Mysore have been sold at 216f to 261f the 100 kilogs; Ceylon, 212f ditto; and Salem, 215f ditto. At *Nantes*, the only sales recorded were 100 sacks Port-au-Prince at 76f in bond the 50 kilogs, and 330 sacks Java (out of 2,000 offered) at 135f 50c to 146f 75c. This week, the sole sale has been 150 sacks Hayti at 77f. At *Marseilles*, last week, 2,000 sacks and 90 casks Ceylon native were sold at prices kept secret. The only other transactions were some petty sales of Rio.

SUGAR.—At *Havre*, in the week ending Friday, business was dull, the sole sales being 141 casks French West India 58f 50c the 50 kilogs duty paid, 247 "usine" at only 58f, 200 sacks Pernambuco at 31f 50c. There were no arrivals. This week sales have not been active: French West India has been quoted at 58f 50c, Porto Rico at 32f 50c to 33f. At *Bordeaux*, last week, 275 hogsheads French West India went at 57f to 58f, 1,300 bales Reunion at 60f to 60f 50c, and about 3,000 at 63f; about 1,000 bales Mauritius, part at 65f, part at different prices; and a small lot of Havana. Some damaged Reunion was also sold. This week, 1,500 bales Reunion have been sold at 61f, a small lot of Mauritius 65f, and one of Guadeloupe 57f. At *Nantes*, last week, nearly 9,000 sacks Mauritius exported were taken at 61f duty paid, 180 sacks Reunion at 61f 50c, 80 casks ditto "Murat," 66f 25c. French West India was nominally at 59f, Havana at 36f. Nothing has been done this week. At *Marseilles*, last week, there were no transactions and no arrivals.

INDIGO.—At *Havre*, in the week ending Friday, no other transactions than those recorded in last week's ECONOMIST took place, and there were no arrivals. Nothing has been done this week. At *Bordeaux*, last week, 18 cases Madras and 84 Kurpah were sold, but prices are not given. No sales this week.

HIDES.—The sales of the week, ending Friday, at *Havre*, were 2,100 dry La Plata, 152f 50c to 158f the 50 kilogs duty paid; a quantity of ditto, calf, 127f 50c to 130f; 250 Buenos Ayres, salted, 85f; 5,900 Monte Video, salted, 87f 50c; 800 Rio Grande, salted, 81f; 1,200 Valparaiso, salted cow, 80f; 389 Australia, salted, 57f 50c; 2,812 New York, salted, 62f to 63f; 1,200 New Orleans, salted (kips), 61f; 1,260 Algeria, salted, 56f 50c. The arrivals exceeded 14,000. Little has been done this week: Buenos Ayres, dry, 155f duty paid; Monte Video, 87f 50c; New Orleans, salted, 59f and 60f: New York, 62f.

WOOL.—Business at *Havre*, last week, was confined to the sale of 18 bales La Plata unwashed at 1f 90c to 2f 15c the kilog in bond; about 130 bales Buenos Ayres unwashed, 87½c to 1f 25c, and 1f 65c. This week some small lots of Buenos Ayres have been sold at 1f 10c to 2f 30c.

TALLOW.—Nothing was done at *Havre* last week, and the same has been the case this week. At *Paris*, yesterday, the 100 kilogs were 136f 50c, a rise of 1f.

SPIRITS.—At *Paris*, yesterday, 3-6 of 90 deg., first quality, was at 97f the hectolitre: Montpellier, 86 deg., at 128f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was at 130f; beetroot, first quality, 98f.

GENEVA, Feb. 27.

The Grand Council of this Canton has adopted a law which authorises time bargains on the Stock Exchange. Only two years back the same Council branded such transactions in the strongest terms.

Swiss firms in London report that Swiss productions are to be allowed to be imported into England on the same terms as the Treaty fixes for those of France. This will, it is believed, be peculiarly advantageous to the manufacturers of silk goods.

Correspondence.

LORD JOHN RUSSELL AND NATURALISATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As a seven years' subscriber to your valuable paper, I take the liberty to request the insertion of the following, with a view of calling the attention of the public in general to what appears to me an injustice to naturalised British subjects.

From the parliamentary reports of the 20th inst., it appears that in answer to Mr T. Duncombe, my Lord John Russell stated that a certain Giovanni Porps, of Naples, "*being only a naturalised British subject,*" could not claim the protection of the British Government. This reply of the Foreign Minister does not refer to any particular offence, but is plainly to the effect that a naturalised British subject is *de facto* an outlaw—being in a worse position than if he had remained a subject of his native country.

As regards criminal offences, it is of course admitted that the offender is amenable to the laws of the land where the offence has been committed. But now, as to the injustice complained of, I quote the very words of the certificate of naturalisation granted under the own hand of Her Majesty's Principal Secretary of State, viz.:—

"I hereby grant to the memorialist upon taking the oath of allegiance all the rights and capacities of a natural-born British subject, except the capacity of being a member of the Privy Council, or a member of either House of Parliament, and except any right and capacities of a natural-born British subject out of and beyond the dominion of the British Crown and the limits thereof, *other than such as may be conferred upon him by the grant of a passport* from the Secretary of State to enable him to travel in foreign parts, &c."

Now, am I to understand that the grant of a passport does not imply any protection whatever while in foreign countries, and merely offers the facility of travelling at the mercy of the authorities of such countries, who, for instance, would be quite at liberty of imprisoning the travellers for present or former political offences, or for debts long before legally arranged by the Court of Bankruptcy, or for any other offences?

On receiving a certificate of naturalisation the memorialist is further reminded that "no certificate or other act of naturalisation granted by the British Government to an alien places him beyond the lawful power and control of his native Government, *unless* he has received from the same a certificate of de-naturalisation, or been released from his original obligation as a subject or citizen in some other legal way."

Is it not fair to expect that, after having fulfilled all these conditions, the foreigner should enjoy the protection of the British Government while abroad?

The unsatisfactory explanation above alluded to leaves some doubt on this score.

Apologising for trespassing on your valuable space, I enclose my card; and am, Sir, your obedient Servant, A BRITISH SUBJECT.

Catherine court, City, Feb. 27, 1860

COMMERCIAL AND MISCELLANEOUS NEWS.

Calcutta advices to the 21st January, bring the following in reference to the import and export trade:—Imports.—The market remained a few days longer in the favourable position noticed in our last, but then became rather quieter again; the advices from the upper provinces reporting free arrivals at the principal marts with some yielding in prices. Dealers therefore held off from fresh operations in the meantime, and this disposition on their part has been materially strengthened during the past week by the increased tightness of money which has been severely felt in the bazaar, tending to restrict business considerably. Exports.—Sugar—The contracts entered into for vacuum pan yellow, deliverable up to March, are very considerable, and the reduced price has induced shippers to operate for Europe with confidence: not less has been the disposition of the Nacodas for Bombay and the Gulfs, to which destinations the shipments continue heavy and important. Linseed—Prices have undergone no variations since our last issue, and the advance in freights checks to a considerable extent any further engagements in the bazaar. In rape and poppy no change. Jute—The imports have continued during the fortnight to a good extent, but principally of the medium and lower qualities. Saltpetre—The purchasers for America and Europe have been very considerable during the last few days at our advanced quotations, and with a further decided upward tendency assisted by the reduced stock and scanty supplies. Rice—The position of this staple has little varied, and the demand for Mauritius, Bourbon, and China scarcely supports previously existing prices. The exports to Europe have fallen off, and no further shipping engagements, as far as we are aware, have been entered into latterly.

Total	53,550,522	37,550,585	17

The returns from the Irish banks of issue for the four weeks ending the 11th ult., show that, as compared with the corresponding period of last year, an increase has taken place, both in the circulation and the amount of coin held, of about half a million. Subjoined is an account of the notes issued by each bank at both the periods named:—

	February 12, 1859. £	February 11, 1860. £
Bank of Ireland	3,404,475	3,531,200
Provincial Bank	1,070,723	1,188,355
Belfast Bank	455,718	500,372
Northern Bank	303,987	316,869
Ulster Bank	500,239	524,391
National Bank	1,163,801	1,292,637
Total	6,898,943	7,353,745

In February, 1858, the aggregate circulation was 6,171,988*l*, so that on the two years the increase is nearly 1,200,000*l*. The Irish banks, taken as a whole, are now 999,250*l* above the sum authorised by certificate, but, taking into account the coin held, the amount is 1,805,125*l* below that allowed by law. The Bank of Ireland is still below the certified issue; all the other banks are above it.

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending January 14, 1860, when compared with the previous month:—

	Dec. 17, 1859.	Jan 14, 1860.	Increase.	Decrease.
	£	£	£	£
Bank of England	21077028	21282625	205597	...
Private Banks	3480716	3499722	19006	...
Joint Stock Banks	3017554	3014530	...	3024
Total in England	27575298	27796877	221579	...
Scotland	4391058	4289541	...	301517
Ireland	7403791	7361762	...	42029
United Kingdom	39570147	39448180	...	121967

And, as compared with the month ending the 15th of January, 1859, the above return shows an increase of 1,104,392*l* in the circulation of notes in England, and an increase of 1,925,896*l* in the circulation of the United Kingdom. On comparing the above with the fixed issues of the several banks, the following is the state of the circulation:—The English private banks are below their fixed issue 905,213*l*, the English joint stock banks are below their fixed issue 287,827*l*,—total below fixed issue in England

1,193,040*l*; the Scotch banks are above their fixed issue 1,540,270*l*, the Irish banks are above their fixed issue 1,007,268*l*. The average stock of bullion held by the Bank of England in both departments during the month ending the 11th of January was 16,624,187*l*, being a decrease of 361,031*l* as compared with the previous month, and a decrease of 2,489,337*l* when compared with the same period last year. The following are the amounts of specie held by the Scotch and Irish banks during the month ending the 14th of Jan.:—Gold and silver held by the Scotch banks, 2,611,851*l*; gold and silver held by the Irish banks, 2,739,559*l*; total, 5,351,410*l*; being an increase of 108,129*l* as compared with the previous return, and an increase of 413,457*l* when compared with the corresponding period last year.

Apart from an increased firmness on the part of holders on Saturday, the market has been without noticeable change. Under a moderate inquiry for consopmtion and export, the sales for the three days amount to 5,300 bales at our quotations, including 2,000 in transit on the basis of previous rates. We quote:—

The cotton market has been very inanimate throughout the week. There has been only a limited demand from the trade and for export; and as the large stock now in port is for the most part offered for sale with some willingness to make concession in price, buyers have had an advantage of ⅛d per lb in most grades of American. Egyptians are quite steady at last week's rates. Brazil are without alterstion. East India have slightly given way, but are not quotably lower. The sales to-day are 8,000 bales. The market is quiet. The reported export amounts to 9,130 bales, consisting of 6,270 American, and 2,860 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

Trade in the manufacturing districts, almost generally, has been in a healthy state during the preseot week, and very full prices have been realised for goods. For shipment to India, large sales have taken place, and a good business has been passing for Germany and the United States. Stocks continue very low, owing, in some measure, to the high value of the raw material. Iron and coals are in request at extreme rates; whilst the home trade generally is steady.

Manchester, March 1. — Eastern accounts have somewhat disappointed buyers, and American accounts being rather against cotton holders, our market has been quiet, but not without a disposition for purchasing wherever length of engagements have not tempted sellers to ask too extreme rates. On Friday and Saturday last week, a large business was done in shirtings, apparently for China, and this week a few heavy sales have been made of 16's to 24's water for the same market. In warps and pincops for the Continent, a very fair amount has also been done. The good spinnings of all counts for the home trade have been remarkably firm, being well under contract and still wanted, but a little weakness has been betrayed in a few inferior marks. On the whole, no change of importance can be reported.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

Huddersfield.—The demand for regular market goods in fancy trouserings at about 4s has been less brisk of late. Prices in every department continue firm. Several shippers have been in the market buying unions rather more freely than of late, but their purchases are not up to the average at this season. The country trade has not yet begun to move. The local wool trade continues brisk, with very fair prospects. As yet there is no advance in price.——Leeds.—The mills in the district continue busy. The warehouse trade of the town is decidedly quieter. The home trade is quiet. Shipping operations are stated to be brisker. The flax and yarn trade continues quiet.——Bradford.—The operations in the wool trade are not extensive, and, as compared with last week, there is less activity. Staplers hold their stocks with great firmness. In noils and shorts there are fewer making, which are taken into consumption as produced at former prices. The yarn trade is still languid, and there is but little doing by the export houses. Prices remain firm, with less yarns producing. There is no improvement in the demand for Cobourgs or Orleans cloth. Owing, however, to the scarcity of hands, manufacturers of plain goods find it expedient to keep their machinery going. For fancy goods the demand is greater than the production.——Rochdale.—Wool—Business on the whole has been rather quiet. Prices for most sorts are very firm, and generally there is an upward tendency. Flannel—A fair business is passing. Small demands to make up sorts keep stocks very light. The export trade also assists in affecting this materially. There is a very good demand for most of the goods made by Yorkshire manufacturers.——Leicester.—There is a good business doing in many branches of the hosiery trade, and business generally is in a very satisfactory state. Manufacturers are well engaged, and stocks on hand are light. In the country districts trade is healthy, and the operatives are generally well employed. There is not much change in the price of yarns; spinners continue to be fully employed. Wools are firm, and command high prices.——Nottingham.—The lace trade remains in as quiet a state as for some time past. The Germans have operated to a slight extent, and there have been some fair orders executed for plain goods. There is not much alteration in the hosiery trade. Yarns are firm, and spinners are asking high prices.——Belfast.—Although increased supplies of goods have been brought forward, the trade, generally, has improved, and prices are well supported.——Dundee.—Trade is somewhat active, but no quotable improvement has taken place in value.——Wolverhampton.—The iron trade has presented no features worthy of special remark. The most noticeable incident is the general scarcity of coal, which prevails to such an extent as in many cases to render it difficult to supply the demand for the works. The business done in native pig iron has been on a moderate scale, which is generally the case during the middle month of the quarter, owing to the large purchases generally made by the manufacturers at quarter-day. The pig makers are not disposed to push business, having ample orders on their books to carry them through this quarter.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 29th day of February, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	28,952,700	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,477,700
		Silver Bullion	...
	28,952,700		28,952,700

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,171,190
Rest	3,680,876	Other Securities	21,164,840
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	7,613,442	Notes	8,307,390
Other Deposits	13,787,883	Gold and Silver Coin	693,321
Seven Day and other Bills	701,540		
	40,336,741		40,336,741

Dated the 1st March, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,346,850	Securities	31,258,030
Public Deposits	7,613,442	Coin and Bullion	15,171,021
Private Deposits	13,787,883		
	42,748,175		46,429,051

The balance of Assets above Liabilities being 3,680,876*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£73,990
An INCREASE of Public Deposits of	335,894
A DECREASE of Other Deposits of	403,645
No change in the amount of Government Securities.	
An INCREASE of Other Securities of	223,851
An INCREASE of Bullion of	18,197
An INCREASE of Rest of	235,814
A DECREASE of Reserve of	61,723

The variation in the reserve and bullion is trifling.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850 :—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,164,581	£ 19,340 293	£ 20,945,162	£ 21,368,042	£ 21,346,850

— Hamburg (3months)	13 13	13 8 8¼	13 5¼ 6	13 6 6¼	13 5 5¼

At the corresponding period of the year 1850, the position of affairs in the Roman States was so unsettled and critical that the probability of the permanent exile of the Pope from his dominions was generally accepted. In France an active canvass was being carried on, in anticipation of the elections on the 10th of March, and much agitation prevailed. At home and abroad, extensive preparations were being made for the Great Exhibition of 1851.

In 1857, a desperate struggle in the House of Commons had just terminated in the defeat of Lord Palmerston's Ministry on the China question—an event which was followed by a decline in the funds. Trade and speculation were active, and money tight. The "other" securities in the Bank had increased a million and a half within a week.

In 1858, numerous political arrests were in progress throughout France, the Imperial Government persisting in the reign of terror which was inaugurated after Orsini's attempt upon Napoleon's life. Yet Consols were at 97, money being very cheap and trade stagnant.

In 1859, war between France and Austria was beginning to be regarded as almost inevitable, the hopes inspired by Lord Cowley's mission to Vienna having died away. Great discouragement consequently prevailed in financial circles on the Continent, and the Austrian exchange was rising with extraordinary rapidity. In preparation for the coming struggle, Sardinia had announced a new loan. The whole of the amount due on account of the Turkish loan of 1858 (representing 4,380,000*l* of stock) had been liquidated. 42 per cent. remained to be paid on account of the Chilian loan of 1,554,800*l*.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 543,131*l*; in 1857, a deficiency of 8,904,732*l*; in 1858, a deficiency of 2,580,389*l*; and in 1859, a deficiency of 2,827,917*l*. In 1860, the deficiency is 7,376,957*l*.

The money market has remained easy, with only a moderate demand, until within the last day or two, when more activity has become observable. A heavy amount of bills fall due on the 3rd and 4th, and must be met to-morrow (Saturday). There is, however, no prospect whatever of any pressure, the more especially as the Bank of England have now begun to make the usual quarterly advances during the shutting of the transfer books on approved bills having as long as six months to run, and on Government securities. The best paper is readily discounted in Lombard street at 3¾ per cent.

The sitting of the weekly Court at the Bank yesterday was an unusually protracted one, and the circumstance gave rise to a variety of idle rumours.

In the Stock Exchange money continues abundant. 2 per cent. is scarcely obtainable for loans on English Government securities.

The demand for gold for exportation to the Continent continues, and has absorbed the whole of the imports. Since the date of our last report 110,000*l* in specie has been received from the United States, but a considerable portion of this was on French account, and the rest consisted of silver, the exchange at New York being still below the point at which gold can be sent to this side. 109,000*l* has also been received from Australia. The whole of these supplies have been taken for abroad, together with an ascertained total of 140,000*l* in bar gold, withdrawn from the Bank of England since the date of our last report. We see by the return given above that these withdrawals have been quite compensated by the influx of coin from the provinces.

Yesterday (Thursday), 20,000*l* in bar gold was taken from the Bank for exportation; but there was no withdrawal this day.

The amount of specie engaged for exportation by the Calcutta and China steamer Ripon, which will leave on the 4th, is only about 150,000*l*, showing a considerable reduction compared with recent shipments. The two last Calcutta and China packets took, respectively, 258,619*l*, and 224,892*l*. The China exchanges have improved.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—Since our last circular (23rd February) there have been two arrivals from Australia,—viz., the Asterope, with 20,000*l*, and the Roxburgh Castle, with 89,000*l*; in addition to these sums, the City of Baltimore brought 15,000*l* gold from New York. The demand for export has thus in a measure been satisfied, as only about 100,000*l* has been taken from the Bank. The Asia brought a large amount of gold, the whole of which was on French account; and the Tagus has taken 10,408*l* for the Peninsula. The following ships are now on the way from Australia:—The Commodore Perry, with 58,000*l*, out 106 days; the Cleadon, with 68,000*l*, out 92 days; the Saldanha, with 64,000*l*, out 85 days; the Essex, with 56,000*l*, out 84 days; and the Indemnity, with 71,000*l*, out 76 days.

Silver.—The price of silver remains steady at 62½d per oz standard; there is, however, not a very brisk demand for the outgoing mail to Calcutta and China of the 4th instant, and the amount purchased is comparatively small. There have been some amounts imported from the Continent. The Tagus, from the Peninsula, brought 4,064*l*, chiefly in Crusades; these have been sold at 60¾d per oz.

Mexican Dollars.—The market for this coin has been quiet during the week, owing to the fall in the China exchange. The Asia brought about 12,000*l* from New York, which were sold at 62½d and 62⅝d per oz, and there are now but few held here.

Exchange on Bombay and Calcutta, for Bank 60 days' sight bills, is unchanged, say 2s 0⅜d; a few small sales having been made at 2s 0¼d; Madras, 2s to 20⅜d. Documented bills, 1s 11¾d.

India Government Loan Notes continue very quiet, and rather weak, compared with last week's quotations. Prices this evening are 103½ to 103¾ for 5½ per Cents.; 97¾ to 98⅛ for 5 per Cents.

The tendency of the Continental exchanges has been less favourable. As regards bills on Paris and Frankfort, a decline has taken place. The exchange on Austria, on the other hand, has again somewhat risen, the financial discredit of that Government being profound.

Proposals for a new Turkish loan of 3,000,000*l* have been under discussion, but the capitalists consulted have not given sufficient encouragement.

No telegram has yet been received in advance of the Australian mail, which is due in London on the 4th, according to the contract. It is looked for with an unusual degree of interest in commercial circles connected with the colony.

Electric communication has suddenly ceased upon a section of the Red Sea Telegraph Company's cable, between Suakin and Aden—a distance of 600 miles. This is the more to be regretted as the cable between Aden and Kurrachee has just been successfully submerged.

The Indian rupee paper is a fraction lower than last week, the 5 per Cent. being quoted 97¾ to 98, and the 5½ per Cent. 103⅝ to ⅞.

The Directors of the Ottoman Bank have this day issued the following report, in anticipation of the fourth annual meeting, which will be held on the 14th instant:—

The directors submit to the shareholders the accounts of the bank for the half-year ending 31st December last, as examined and certified by the auditors. The business of the bank for that period results (after making allowance for bad and doubtful debts) in a net profit of 43,312*l* 6s 9d; making, with 1,030*l* 17s 4d (the balance brought forward from last account), a sum of 44,343*l* 4s 1d to be dealt with on this occasion. From this sum the directors recommend payment of a dividend of 16s, and of a bonus of 12s per share. They further recommend an addition of 8,000*l* to the reserve fund. A balance of 1,343*l* 4s 1d will be thus left to be carried forward. The reserve fund existing at the period of the last account (40,000*l*) has been withdrawn from employment as part of the capital of the bank, and invested in Consols. C. Bell, G. T. Clark, and L. M. Rate, Esqrs, are the directors retiring by rotation, and, being eligible, offer themselves for re-election. The auditors, Messrs J. E. Coleman and H. Tindal Atkinson, retire, in accordance with the deed of settlement, and are eligible for re-election. Notice has been given by the Hon. Thomas Charles Bruce and John Wingfield Larking, Esq, both duly qualified shareholders, of their intention to offer themselves as candidates for the vacancy in the direction.

At the meeting of shareholders in the Bank of Egypt, held to-day, the Directors' report, recommending a dividend of 1*l* 15s per share, was adopted. This is at the rate of 7 per cent. for the whole year, no dividend having been declared at the last meeting.

A steam navigation project of considerable importance has been brought forward under the title of the Anglo-Luso-Brazilian Royal Mail Steam Navigation Company, with a capital of 400,000*l*, in 10*l* shares. The project, however, is not entirely a new one, as the Company commenced the service between Milford Haven, Lisbon, and Brazil on the 3rd of October last, and have since continued it with regularity. It is announced that three distinct subsidies have been obtained, viz., one of 15,000*l* from the Government of Portugal, one of like amount from the Government of Brazil, and a third contract with the British Postmaster-General, respecting which it is affirmed that the terms are "highly favourable." Other negotiations are in progress, promising to raise the gross income of the Company for postal service to 85,000*l*. Many respectable names are attached to the project, which is in alliance with the Great Western and South Wales Railway Companies.

The latest prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 3½ to 3⅝ prem.; Universal Marine Insurance, ¾ to ⅞ prem.; London and Provincial Marine Insurance, 5-16 to ⅜ prem.; San Paulo (Brazilian) Railway, 5-16 to 3-16 dis.; Bank of Turkey, ⅞ to ⅝ dis.; City of London Brewery Preference shares, ¾ to ⅞ prem.; Buenos Ayres and San Fernando Railway, ½ prem., "buyers"; and Folkestone West Cliff Hotel Company, 3-16 to 5-16 prem. The shares in the new marine insurance companies have been in great demand.

At Paris, to-day (Friday), the 3 per Cent. Rentes closed at 68 for money, and 67·95 for the end of March. These prices are equal to those of last Friday, but ¼ to ⅜ per cent. below those of yesterday. The fall has been occasioned by the unsatisfactory character of the allusions in the speech of the Emperor Napoleon to the Italian and Savoy questions.

Notwithstanding the ministerial successes in the House of Commons, the English funds have shown heaviness. This was especially the case to-day, when the speech of the Emperor of the French excited an unfavourable feeling. Consols closed this afternoon at 94⅝ to ¾, both for money and the 8th inst., being ⅛ to ¼ per cent. lower than yesterday afternoon, and ¼ to ⅜ per cent. lower than on last Friday. The public invest to a moderate amount, but by no means on the scale witnessed a few years ago, when the funds were not prejudiced by the active competition of a host of new securities which now find great favour in the eyes of investors. Amongst these, English railway stocks and Indian Government and railway securities occupy the front rank. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

CONSOLS

British railway stocks continued to show remarkable buoyancy during all the earlier part of the week, and, though partially relapsing to-day, in consequence of the fall in Consols, left off generally higher than on last Friday. Great Northern stock has risen 2 per cent., Great Western 1 per cent. (in each case allowing for the dividend deducted this week), and Lancashire and Yorkshire, London and North-Western, South-Eastern and North British ½ per cent. Midland is stationary, whilst London and South-Western has declined ½ per cent. The settlement this week showed an extraordinary number of small investments in the principal lines, particularly in the Great Western and South-Eastern. There has consequently been a remarkable scarcity of stock. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.10 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422 per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 1-10th per cent. dearer in London than in Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is 108½ to 108¾ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; and, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between England and America.

The Commercial Times.

WEST INDIA MAIL SERVICE.—Commencing on the 2nd March inst. a new table of routes for the West India mail service will be brought into operation, with the object of securing the arrival at Southampton of the packet bringing the homeward mails three days before the departure of the packet conveying the outward mails, and thus accelerating the course of post between the United Kingdom and the several places served by those packets. The packets for the West Indies will continue to sail from Southampton on the same days as at present, viz., the 2nd and 17th of each month; and the packets from the West Indies will be due at Southampton on the 14th and 29th of each month. Mails for Carthagena, Santa Martha, Greytown, and Blewfields, will in future be despatched once a month only instead of twice a month as heretofore. The mails for Carthagena and Santa Martha will be forwarded by the packet of the 2d of the month, and the return mails will be due on the 29th of the

month. The mails for Greytown and Blewfields will be despatched by the packet of the 17th, and the return mails will be due on the 14th of the month. In all other respects the mails to be conveyed from this country by the West India mail packets will be despatched under the existing regulations.

MAILS FOR CEYLON AND MAURITIUS.—Commencing with the packet which will convey the mails to be despatched from England for Australia this month, the mail packets between Suez and Sydney will, in future, call at Point de Galle (Ceylon), instead of at Port Louis (Mauritius). Additional mails for Ceylon will, therefore, be made up on the morning of the 12th of every month for transmission via Southampton, and on the evening of the 18th of every month for transmission via Marseilles. The mails for Mauritius and Reunion will continue to be despatched from London with the Australian mails, and will be conveyed from Aden by a branch packet.

BOOKS, &c., FOR ALEXANDRIA, CAIRO, AND SUEZ.—On the 1st March inst. and thenceforward, the privileges of the book post (as applied to the British Colonies) will be extended to book-packets transmitted by packet via Southampton, between the United Kingdom and those places in Egypt at which British post offices are maintained, viz., Alexandria, Cairo, and Suez. The postage chargeable on such book-packets will be the same as to the British Colonies, viz.:—For a packet not exceeding 4 ozs in weight, 3d; above 4 ozs and not exceeding ½ lb, 6d; above ½ lb and not exceeding 1 lb, 1s; above 1 lb and not exceeding 1½ lb, 1s 6d; above 1½ lb and not exceeding 2 lbs, 2s; and so on, increasing by sixpence for each additional half-pound or fraction of half a pound.

Imports of the week ..... 28,924 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Only a limited supply of English wheat was on sale at Mark lane to-day. Good and fine samples changed hands freely—other qualities slowly, at Monday's currency. In foreign wheat, very little was passing, on former terms. The barley trade was much less active; nevertheless, no actual decline took place in prices. Malt met a dull inquiry; but all other produce commanded extreme rates. The imports from abroad, this week, are 450 quarters of wheat, 7,100 barley, 460 oats, 50 sacks and 5,990 barrels of flour.

At Liverpool, this morning, the trade generally was tolerably firm, at late quotations.

Advices from New York to the 18th ult. state that flour was the turn dearer; but that grain was a slow inquiry. Messrs Briggs and Co. of Alexandria—whose communication is dated the 18th ult.—inform us that wheat was in fair request, at from 34s 6d to 35s per quarter for Saide qualities. Beans were selling at 25s to 27s 6d; and barley was held at 22s per quarter.

The total sales in the Liverpool cotton market during the week amount to 55,500 bales, including 44,500 to spinners, 2,000 bales on speculation, and 9,000 for export. Quotations are 1-16d per lb reduced since Friday last; in some instances, however, a decline of ⅛d per lb has been submitted to. To-day the market closes quiet, with sales of 7,000 bales. There has been a fair inquiry throughout the week, which has been readily met on the part of holders at the decline named, but without any pressure to force sales.

At New York, the value of all grades of cotton has given way ⅛d per lb. At New Orleans, too, the quotations have ruled easier; but at Alexandria, prices have had an upward tendency. From October 19 to February 16, the total shipments to all quarters were 57,087 bales, against 51,699 in the previous season. Good was quoted at 10d; fine, 11d to 12½d per lb.

We have to report a heavy demand for all kinds of tea, and, in some instances, prices have had a drooping tendency, owing to some large additions having been made to the stock. The public sales, held to-day, have gone off heavily.

The following commercial news is dated Hong Kong, Jan. 14:—

Tea—The market during the fortnight has been very inactive. Teamen show no anxiety to realise, notwithstanding the near approach of the China New Year. Eight chops have arrived, five of which are held off the market altogether, the holders feeling confident that there is little more to come forward, and consequently expecting higher rates. Settlements have been principally in barter for imports, and the prices given below can hardly be taken as a criterion. They show a decline of 5 mace to 1 tael on congou, and 1 tael to 1½ tael on scented teas. Settlements to date are 188 chops; stock, 43 chops. Sales during the fortnight are as follows:—Congou, 3 chops, blackish leaf, 25 taels to 25¼ taels. Souchong, no stock. Scented orange pekoe, 6,000 boxes sold: common mixed leaf, 18½ taels to 22½ taels; fair medium 23 taels to 25 taels; fine, 27 taels to 30 taels; finest, none. Scented caper, 7,000 boxes sold; low and spurious, 15 taels to 17 taels; fair to medium, 19 taels to 21 taels; fine and finest, none. Canton packed congou, 1,500 chests, at 21½ taels to 23 taels. Gunpowder, 4,000 boxes, at 16 taels to 17¼ taels. Foochow advices are to the 6th inst. The tea market has been excessively dull during the fortnight, and since the arrival of the mail with news from England to the 10th November, the settlements do not amount to more than 1,000 chests of congou at a decline of about 1 tael. The teamen show no anxiety to realise, although the Chinese New Year commences on the 23rd inst., before which time a general settlement of accounts takes place; this, together with the reports from the country, induces us to believe the supplies to come forward will be very moderate. The quality of that to arrive is said to be of ordinary kinds. Sales have been as follows:—Congou, 3,300 chests, from 11.5 taels for low ordinary to 20 taels for medium, chiefly for England. Oolong, 4,020 half-chests, from 17.5 taels to 20 taels for common to fair cargo, all for the United States. Pekoe, 280 chests, at 32 taels to 64 taels. Scented teas, 700 boxes at 23¾ taels. Stock—Congou, 48,000 chests, from low ordinary to fair medium; Oolong, 5,300 half-chests, common and fair cargo; scented teas, 2,800 boxes, fair quality. The arrivals and sales in the present and last seasons are as follow:—Arrivals—Congou, 340,000 chests, against 170,500 chests, last year; Souchong, 15,300 chests, against 8,500 chests last year; Oolong, 193,620 half-chests, against 140,000 half-chests last year; Pekoe, 15,150 chests, against 2,800 chests last year; scented teas, 46,000 boxes, against 17,000 boxes last year. Sales—Congou, 268,700 chests, against 148,240 chests last year; Souchong, 15,150 chests, against 7,850 chests last year; Oolong, 172,120 chests, against 129,670 chests last year; Pekoe, 3,600 chests, against 400 chests last year; scented teas, 28,000 chests against 14,000 chests last year. Quotations—Congou, low ordinary to clean common, 11 taels to 15 taels; good common to fair medium, 16 taels to 24 taels. Souchong, fair (nominal), 22 taels. Oolong, very common to common cargo, 16 taels to 17½ taels; fair to good cargo, 18½ taels to 20 taels. Shanghai advices are to the 6th inst. Silk—3,000 bales settled during the fortnight. Prices of Tsatlees and long reels have advanced 5 taels; other kinds remain much the same. Stock is gradually decreasing, and arrivals come in but slowly, notwithstanding the high prices ruling. Total settlements since the 1st of July, 44,000 bales. We quote:—

	taels		taels
No. 1 Tsatlee	450	No. 1 Taysaam	375
No. 2 Tsatlee	430	No. 2 Taysaam	355
No. 3 Tsatlee	410	No. 3 Taysaam	340
No. 4 Tsatlee	395	No. 4 Taysaam	320
Inferior Tsatlee	355 to 385	Inferior Taysaam	305 to 315

Throwns, 388 taels to 405 taels; long reels, 310 taels to 330 taels;

skeins, 280 taels to 290 taels. Total export of silk from China to Europe is 43,431 bales, against 49,387 bales in 1858, or a decrease for this season of 5,856 bales. Tea—Very few transactions have taken place in black tea. Holders continue firm, and will not submit to prices offered Supplies arrive but slowly, and quality is inferior. Not more than 60 chops more are expected to arrive this season. Settlements for the fortnight are as follow :—

Congou—Ningchow and Oopack	2,400	chests, at	25 to 31 tls	duty paid.
Sunchunki and Hohow	2,200	—	18½ to 23½	—
Shangbai packed and refired	500	—	18 to 18½	—
Pekoe	100	—	24	—

In green teas, settlements are only 16,700 half-chests, at rather lower rates for most kinds. Arrivals are very small, and about 60,000 half-chests will complete the season's supply. Total settlements since July 1 are—Black, 207,700 chests, against 48,300 chests last season; green, 329,000 half-chests, against 331,000 half-chests last season. The unsold stock is—Black, 28,000 chests, against 11,000 chests last season; green, 75,000 half-chests, against 60,000 half-chests last season. Total export from China to Great Britain is 54,129,600 lbs, against same time last year at 32,231,700 lbs, or an increase of 21,897,900 lbs for this season. To the United States the export is 23,377,400 lbs, against 18,296,200 lbs last year, or an increase for 1859-60 of 5,081,200 lbs.

Although no actual change has taken place in the quotations, all raw sugars have moved off slowly during the week, and the transactions in refined goods have been much restricted.

Only limited supplies of coffee have been on offer, and the trade has continued healthy, at full quotations.

Messrs Volkart Brothers, of Colombo, writing on the the 30th of January, thus report the state of the coffee market :—

The favourable weather since our last has enabled shippers to make considerable progress in exports of coffee, as follows :—

Plantation Coffee.				
To Great Britain	111,569 cwts	against last year,	cwts	66,405
Foreign Ports	7,318	—	—	8,781
Australia and India	4,418	—	—	4,905
	123,305			80,091
Native Coffee.				
To Great Britain	46,011 cwts	against last year,	cwts	16,743
Foreign Ports	13,335	—	—	52,854
Australia and India	493	—	—	8,868
	59,839			78,465

Owing to small supplies, native coffee has been dealt in rather sparingly Since receipt of last mail news, dealers have held back, and we hear o but one or two parcels of unpicked bought at an advance of 2s 6d on previous quotations, at which there are still buyers. Plantation coffee has remained without much animation; we do not hear of many sellers on our market, except for small parcels in parchment. There are buyers of good qualities for early delivery at full rates. Plantation coffee, low, per bhl, 10s 9d to 11s; ditto, mountain, 11s 3d to 11s 9d: native coffee unpicked, per cwt, 39s 6d to 40s 6d; ditto, picked and dried, nominal.

Messrs Trueman and Rouse furnish the annexed information :—Imports and Stocks of Sugar and Coffee at the Principal European Ports, for the Month ending 31st January, 1859 and 1860.

* The stocks in Holland are in first hands only; in all other countries in first and second hands.

Cocoa has been in improved request, at 2s to 4s per cwt more money for West India qualities.

The rice market has been tolerably active, and prices, generally, have ruled steady.

Moderate quantities of fruit have been disposed of; but there is no activity in the trade.

Rum has moved off heavily, and Jamaica qualities have sold at a decline of 2d per gallon. The brandy market is quiet; but the price of British spirit has been advanced to 10s per gallon.

The first series of colonial wool sales opened on Thursday, with a very large attendance of home and a limited number of continental buyers. The biddings, though spirited, show no advance on the last sales. The arrivals in time for these sales comprise the following quantities :—Sydney, 4,321; Port Philip, 10,405; V. D. Land, 55; Adelaide, 4,660; New Zealand, 1,287; Swan River, 42; Cape, 12,288; total, 33,058 bales.

Messrs Ronald and Son, of Liverpool, write as follows in reference to the wool trade :—

East India—The arrivals from Bombay since our last have been 4,174 bales, which are all held over for the next public sales here, but the few transactions during the month by dealers have been at full prices. Peruvian—3,961 ballots have arrived this month, and met with ready sale at late rates. Alpaca—The imports amount to 7,144 bales, the principal part of which had been sold to arrive, and the few sales made during the month have been at full rates. Mohair still continues in good demand, and commands a ready sale, on arrival, at market value. River Plate—No imports since our last, and the market is now bare of stocks, the transactions having consequently been but few, but this description is much inquired for. Russia Donskoi is still much sought after, but the prices offered would leave such a heavy loss to importers that very little business has been done. Laid Highland continues in limited request, without any variation in price. Cheviot of a good class is still much wanted. Irish has been more in demand

The annexed information is furnished by Messrs Grant, Hodgson, and Co :—

The demand for most descriptions of tobacco last month was extremely limited, sales being only 500 hhds, viz. :—101 hhds of Virginia leaf, including 80 hhds taken for the navy; 16 hhds of strips; 61 hhds of Kentucky leaf; 130 hhds of strips; and 192 hhds of Maryland. The small purchases made by the trade were almost exclusively of fine and medium sorts; ordinary and common remained neglected, although obtainable at prices showing a considerable margin compared with those for good and fine descriptions. It is more than probable that an improved demand may be experienced for qualities hitherto neglected, in consequence of the greatly diminished supply of nearly all sorts denominated as substitutes. Imports—24 hhds. Deliveries—906 hhds, against 749 hhds in the corresponding month of last year. Stock—17,389 hhds, against 13,504 hhds in 1859; 9,233 hhds in 1858; 9,958 hhds 1857; 8,358 hhds in 1856; and 10,330 hhds in 1855.

Messrs Moran and Co., of Calcutta, have forwarded the annexed report of the indigo trade, to the 21st of January :—

Until within the last ten days our indigo market continued in a languid state. The arrival of the 19th December news, however, reporting more confidence in the continuance of peace, and a consequent improved demand for all kinds of East India produce, imparted some degree of animation to the public sales, which have since proceeded freely at slightly improved prices, but the upward tendency of exchange checks any rise of consequence. Fine qualities, as the fact of their scarcity becomes more apparent, command the full equivalent of the October sales rates, and for the finest lots of ten chests a bid or two higher. The transactions of the past fortnight comprise about 600 chests by private contract, and about 3,450 by auction, making the total quantity out of the market about 66,000 maunds. Exports of indigo from the 1st November, 1859, to the evening of the 20th instant :—To Great Britain, 9,028 to Havre and Bordeaux, 2,869; to Foreign Europe, 43; to America 229; to Gulf, &c., 822; total, 12,991 chests.

We have no change to notice in the value of hemp. The demand, however, is still restricted to small parcels.

Scotch pig iron has moved off slowly at 60s and 59s 6d cash mixed numbers. Spelter is inactive at 20*l* 10s. The stock is 3,264 tons, against 3,900 tons at the corresponding period last year. Copper is tolerably firm; but yellow metal has given way ¼d per lb. Straits tin is worth 131*l*.

Linseed oil has moved off slowly, at 27*l* 5s. In the value of other oils very little change has taken place. Spirits of turpentiae, 36s 6d to 37s 6d per cwt.

Tallow is in fair request at 60s to 60s 3d for P.Y.C., on the spot. For delivery during the last three months sales have been made to-day at 53s 6d to 53s 9d per cwt.

"Nearly all kinds of domestic cotton goods continue steady," observes the New York *Shipping List*, "and, with moderate stocks, holders are enabled to maintain the firmness previously noticed, while sales are making, now and then, at improved prices. Jobbers have but a light supply of domestic goods on hand, while commission houses, in some instances, are almost bare of desirable goods, and have obtained an extension of their contracts. The export demand continues unabated, and transactions for shipment are heavy. The retail dry goods trade of this city has been much more moderate the present winter, than during several previous years, and goods are said to be offered at relatively lower prices than ever before. Nearly all kinds of winter silks have declined materially since the 1st of January."

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

New York, Feb. 15.—Flour and Meal.—The market for State and Western flour remains without important alteration. The demand continues moderate for the local and Eastern trade, with small sales for ship-

ment. There has also been some little speculative inquiry, but, notwithstanding holders have granted a further concession of 5 to 10 cents per bbl—mainly on the lower grades—prices are yet too high to induce an active demand for speculation. European advices per Bohemian, at Portland, were of a more favourable tenor, but were received at too late an hour to exercise any influence on 'Change. The sales for the three days comprise 15,100 bbls, including 6,200 yesterday, part of which was taken on speculation, but the bulk for consumption. Canada flour has been in moderate demand, but holders are firm at full previous prices; the sales are 1,000 bbls, including 280 yesterday, closing dull at 5.40 dols to 6.75 dols per bbl, as to quality. The market for Southern flour has been dull since Friday, but prices are without noticeable change. Export from 1st to 14th February: wheat flour, 20,845 bbls, against 15,822 in 1859.

Grain.—The demand has been moderate for nearly all kinds of wheat, but the market continues buoyant, and the comparatively small transactions have been at very full prices. Transactions during the three days amount to 18,800 bushels, including 1,300 choice North California at 1.55 dol; 5,000 ditto Milwaukee Club, 1.25 dol delivered; 200 white Indiana, 1.50 dol; 100 red North Carolina, 1.28 dol; 5,000 very inferior California, 80 cents; 9,500 California, mixed with barley and oats, 1.20 dol to 1.30 dol; and 2,200 white Canada, yesterday, at 1.40 dol. Corn has also been in moderate request, and prices are 1 to 2 cents per bushel lower on all kinds; the sales are 40,000 bushels. Export from 1st to 14th February: Wheat, 47,733 bushels, against 5,990 in 1859; corn, 19,298 bushels, against 5,928 in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

Mark Lane, Friday Evening.

Most of the leading markets have been but moderately supplied with English wheat. Compared with last week, the demand has been less active; nevertheless, the value of good and fine samples has been well supported. For foreign wheat, the inquiry has been somewhat restricted. Importers, however, have continued firm, and prices have ruled firm. For fine and useful brands of barley, the inquiry has continued somewhat active, at full quotations; but light parcels have moved off slowly. In the malt trade, we have no improvement to notice. Oats have sold at fully previous rates, and the value of both beans and peas has continued steady. The flour trade has ruled firm.

Holders of wheat are looking forward with no little anxiety to higher quotations. At present, however, there is no prospect of enhanced currencies, even though importations continue on a very moderate scale. The fact is that the supply of wheat now in the country—both English and foreign—is large, and fully equal to our wants for a considerable period.

Letters from New York to the 17th ult., state that flour was rather dearer; but that the demand for wheat was very quiet. Most of the continental markets continue to be fairly supplied with wheat, in which about an average business has been passing at full prices. All kinds of spring corn have sold steadily, at extreme quotations.

The Scotch markets have been but moderately supplied with all kinds of grain. Generally speaking, the demand has ruled steady, at full quotations. In Ireland, wheat, oats, and Indian corn have changed hands steadily, at extreme rates; but most other articles have met a dull inquiry.

The show of English wheat here, to-day, was limited. Good and fine samples moved off steadily, at full quotations; but other qualities were a dull inquiry. In foreign wheat very little was passing, on former terms, and the inquiry for barley was much less active. Malt was dull; but oats, beans, peas, and flour commanded extreme rates.

Mr Ed. Rainford states that 57 vessels have arrived off coast since the 23rd ult. laden with grain, and that an active business has been passing in floating cargoes at full prices.

The London averages announced this day were:—

	qrs	s	d
Wheat	4072	at 46	7
Barley	1641	39	3
Oats	1659	23	7
Beans	455	35	7
Peas	179	38	8

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—The market, although quiet, is steady, and the limited supplies submitted have chiefly found buyers at former prices, especially for strong refining kinds. Arrivals keep light, and the stock is slowly diminishing. About 1,300 hhds West India changed hands to yesterday, generally at former quotations. 493 casks Barbadoes, by auction, went as follows: brown, 35s 6d to 38s 6d; yellow, low to fine, 39s to 46s. 370 casks other sorts Jamaica, 37s to 42s, for low brown to middling yellow; grainy Demerara, 40s to 46s. The stock of sugar at this port was further reduced to 51,500 tons at the close of last week, against 46,800, 50,000, and 38,550 tons in 1859 to 1857. Stocks of colonial are much below the average.

Mauritius.—1,544 bags brought forward on Tuesday were sold as follows: grainy kinds, low to fine greyish yellow, 41s to 44s 6d; soft brown, 31s 6d to 35s per cwt.

Bengal.—390 bags Gurpatta data found ready buyers at 41s 6d to 42s 6d per cwt for low middling to middling quality.

Madras.—A few lots of native realised 32s to 33s per cwt for brown and low yellow.

Foreign.—At the close of last week a cargo of Havana, No. 16, sold for a near continental port at 31s 6d. Since then no further floating business is reported. By auction, 2,743 boxes Havana were partly sold: brown to good yellow, 39s 6d to 44s 6d; grainy, 45s to 48s 6d. 213 bags Bahia were bought in at 38s to 39s. 754 casks Cuba partly sold at 37s to 44s for soft brown to good yellow, and 320 casks Porto Rico at 40s to 45s 6d per cwt.

Refined.—The market is still quiet, and prices have ruled rather easier. Common goods quoted 50s 6d; middling, 51s; fair, 51s 6d to 52s per cwt. Pieces are in steady demand. Dutch crushed has sold upon easier terms.

Molasses.—No sales have been effected in West India.

Rum.—The market has been flat. Demerara sold at 2s to 2s 2d; pale Leewards, 1s 8d per gallon. The stock of West India rum is 20,250 puns 1.320 hhds, against 20,370 puns 1,260 hhds at same date last year. Yesterday, 360 casks Cuba sold at 1s 9d to 1s 9½d per gallon proof.

Cocoa.—Much higher prices have been paid for West India, owing to scarcity. 350 bags Grenada, by auction, brought 59s 6d to 72s per cwt for grey to good red. Business is reported in Guayaquil privately at 72s to 73s.

Coffee.—There has been less business done than for some time past, attributable to the diminished stocks in first hands. By auction, 70 casks 660 bags native Ceylon realised 59s to 60s for good ordinary. 57 casks plantation growth went at 62s to 70s for fine ordinary pale to middling quality. 74 cases 6 casks Naidoobatum were bought in at 74s to 76s for middling close made. Part of a cargo of St. Domingo has sold at 58s 6d per cwt for a near port. A parcel of Mocha, of indirect import, has sold at 120s to 121s per cwt.

Tea.—The market has been flat during the week, which may be partly ascribed to the further public sales announced for to-day. Advices by the mail represents shipments as showing a further increase.

Rice.—Some further contracts have been made in soft grain descriptions, but the demand for these is less active than last week. By auction, 6,060 bags Rangoon were bought in above the value, viz., 9s 6d to 10s for good. Privately, moderate transactions have occurred at 8s for old Moulmein and 8s 9d for old Necrancie Arracan; new Rangoon, 9s 6d. Good Ballam has sold at 10s, and low white Bengal at 9s 9d to 10s per cwt. 6,000 bags Java changed hands yesterday, but no particulars transpired. A floating cargo of Madras has sold at 10s per cwt, landed, quality guaranteed.

Imports and Deliveries of Rice to February 25, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons

Exported	3950	3060	2300	5930
Stock	65530	83500	75400	54500

Spices.—The market remains in a quiet state, with very little business passing by private contract. 114 bags white Penang pepper sold at 7⅞d to 7¾d. 145 bags Singapore realised 4¼d. 73 cases brown nutmegs were taken in at 2s 1d to 2s 6d for small to middling, and 58 bags pimento at 4d per lb. 157 boxes cassia lignea were bought in at 98s to 100s per cwt, there being no fair offers made.

Saltpetre.—This article continues very dull, and the only business to notice by private contract has been a parcel of Bengal, refraction 10¼, at 38s. At auction, 250 bags Bombay were bought in at 29s to 30s 6d, and 690 bags Bengal, refraction 14 to 7¼, 37s 6d to 41s per cwt.

Imports and Deliveries of Saltpetre to February 25, with Stocks on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imported	3120	2740	1340	1720
Delivered	2230	2800	2260	1730
Stock	4740	2900	5500	2050

Delivered last week 270 tons.

Cochineal.—165 bags, by auction, chiefly consisting of Teneriffe, went at 1d easier rates: silvers, 3s 4d to 3s 5d; blacks, 3s 6d to 3s 9d. A few lots of Honduras went at about the previous valuation; pasty to middling silver, 2s 10d to 3s 6d per lb.

Indigo.—The market, although rather quiet, remains in a very firm position. Deliveries continue good, and the stock has further declined, while the advices from Calcutta bring high prices.

Metals.—The market generally remains unsettled. Scotch pig iron closes at 59s 6d to 59s 9d per ton. 600 tons spelter sold yesterday at 20*l* 12s 6d to 20*l* 15s per ton to arrive, with a little on the spot at 20*l* 15s. Tin is firmer in Holland. A good deal of business has been done in Straits here at 130s to 131s per cwt, chiefly the former price, for arrival.

Hemp.—A moderate inquiry prevails for Manilla, but generally rather under the prices holders are inclined to accept. Common to fair roping quality sold at 23*l* to 23*l* 15s. Some large parcels of jute have sold privately on the spot and afloat at 15*l* to 21*l*, according to quality. On Wednesday, 2,277 bales, by auction, about one-fourth part sold at 10s advance, from 14*l* 7s 6d to 21*l* per ton. Russian hemp steady at 28*l* per ton.

Oils.—Cocoa-nut is not very active. By auction, yesterday, some Ceylon sold at 42s to 42s 6d; Cochin was bought in at 45s to 45s 6d. Palm has been quiet at 45s to 46s 6d. Nothing of interest has transpired in common fish oils. By auction, seal sold at 31*l* 5s to 35*l* 15s for straw to pale; brown, 29*l* 15s; cod, 35*l* to 35*l* 10s. American sperm has advanced to 99*l*. Olive is in steady demand at the recent improvement: Gallipoli, 61*l* to 62*l*; other kinds, 55*l* to 58*l* per tun. Rape active: foreign refined, 41s to 41s 6d; brown, 39s 6d. Linseed has sold to some extent for forward delivery at 28s (April to June), but is quiet on the spot at 27s 3d per cwt.

Linseed.—Very large contracts have been made in Calcutta and Black Sea afloat, the latest prices obtained being 48s per quarter.

Turpentine.—1,600 barrels rough have sold at 9s 7½d. American spirits, 37s to 37s 6d; the former price paid for arrival.

Tallow.—At the close of last week a firmer tone pervaded the market, which has since continued, but the consumptive demand is not very active. Quotations close rather higher than on the 24th ult., viz., 60s 3d on the spot, 56s for the next three months' delivery, and 53s 6d per cwt for the last three months of the year.

PARTICULARS OF TALLOW.—Monday, February 27.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—8,000 bags Mauritius partly sold at previous rates for refining kinds. The sales of West India for the week amounted to 1,336 casks.

COFFEE.—168 bags ordinary native sold at 57s to 57s 6d. 787 bags Singapore Java, 60s to 63s 6d per cwt.

TEA.—The public sales to-day comprised 21,900 packages, of which 8,650 passed, and 4,750 sold, all printed without reserve. Congous, gunpowder, and Assam were cheaper by ½d to 1d per lb.

RICE.—3,000 bags soft grain sold by private contract.

SPICES.—66 cases nutmegs sold; brown, 1s 5d to 2s; good, 3s 10d to 4s 1d; limed, 1s 4d to 1s 7d. 21 packages mace were taken in at 1s 6d to 1s 8d. 52 bags Singapore white pepper brought 7½d; 1,330 bags common dusty Penang, 4d to 4½d per lb.

COCHINEAL.—321 bags Teneriffe silvers sold at about the former value; terms three months prompt, 5l per bag deposit, and no discount or interest.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very quiet this week; if anything, in favour of buyers. For export, 6 and 10 lb loaves are reported to have been sold at 41s for forward delivery. Nothing doing in crushed: Several parcels of Dutch crushed have been sold at 32s 6d in barrels; also 250 tons W Z at 30s in hhds, all f.o.b. in Holland. Nothing to note in Belgian loaves or crushed.

GREEN FRUIT.—A good business doing. Oranges of all kinds sustain their value. Some parcels of St Michael's Terceira, and Lisbon, sold by Keeling and Hunt at public sale, went at an advance in price. More inquiry for lemons and sales effected. Little doing in nuts. In the face of a total repeal of duty next week, holders are disposed to await the same. Seville sours 10s per chest higher.

DRY FRUIT.—Pending the settlement of duty question, our market remains in a quiet state, though a fair business has been done during the week, chiefly for export. At public sale, a parcel of Valentia raisins sold without reserve at 37s. No more of similar quality to be had at such a price.

ENGLISH WOOL.—More business doing in the English wool trade, at rather improved prices.

COLONIAL AND FOREIGN WOOL.—The sales commenced yesterday, with good attendance of buyers. Prices ruled firm at last sale's rates. The quantity arrived to date is 33,058 bales.

FLAX unaltered.

HEMP market steady at our quotations.

COTTON.—No sales reported in cotton this week.

SILK.—There has been no alteration in the market for some little time, which remains extremely quiet; prices with little or no alteration.

TOBACCO.—Rather more inquiry has been made during the last few days for good and choice descriptions of Kentucky, both leaf and strips. Maryland has also improved in demand.

LEATHER AND HIDES.—The leather market continues inactive, the transactions being limited in most articles to the immediate wants of buyers. There is a demand for good common dressing hides, and shaved hides 22 lbs to 24 lbs. Calf-skins also are in fair request. At Leadenhall, on Tuesday, there was not a large supply of fresh leather, but the business done was small. Prices remain nearly stationary.

METALS.—The metal market presents little change to note. Copper is quiet in demand, and yellow metal has been reduced in price by the manufacturers ½d per lb. The prices of English and foreign copper both keep steady. Iron finds only a middling demand for manufactured, but Scotch pig has rallied, and prices tend to go higher. Tin—A large business has been done in Straits, which has stiffened prices of foreign, but English is quiet. Spelter—A report of some 400 to 500 tons having been yesterday sold to arrive has somewhat strengthened the position of holders, and stock on the 1st instant was 3,264 tons, which is a reduction in the month of nearly 500 tons. Lead continues firm, and in demand. Tin plates are in better inquiry.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	61	9
Fat by ditto	3	3
Yellow Russian	61	6
Melted stuff	42	6
Rough ditto	25	0
Greaves	16	0
Good dregs	7	0

Imports this week 1,597 casks.

METROPOLITAN CATTLE MARKET.

THURSDAY, March 1.—Only a limited supply of beasts was on offer here, to-day, in, for the most part, middling condition. All kinds moved off steadily, and Monday's prices were well supported. Although the show of sheep was only moderate, the mutton trade was in a sluggish state, and in some instances clipped sheep gave way 2d per 8 lbs. The few lambs on offer were a dull inquiry, at from 5s 6d to 6s 8d per 8 lbs. We had a fair demand for calves—the supply of which was only moderate—at full quotations.

Per lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	6	5	8
Second quality ditto.....	3	8	4	2	Large coarse calves ...	5	0	5	4
Prime large oxen	4	4	4	8	Prime small ditto	5	6	5	8
Prime Scots, &c.....	4	8	4	10	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	2	Small porkers	4	2	4	10
Second quality ditto.....	4	4	4	10	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	5	0	5	4	Quarter old store pigs...	23	0	30	0

Lambs, 5s 6d to 6s 8d.

Total supply—Beasts, 812; sheep, 3,090; calves, 152; pigs, 312.

Foreign supply—Beasts, 110; sheep, 400; calves, 95.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2l 15s to 4l 8s; clover, 4l 0s to 5l 5s; and straw, 1l 6s to 1l 10s per load. A fair demand.

WHITECHAPEL.—Meadow hay, 2l 15s to 4l 8s; clover, 4l 0s to 5l 5s; and straw, 1l 5s to 1l 10s per load. A moderate supply, and a steady demand.

HOP MARKET.

BOROUGH, Friday March 2.—There is rather more inquiry both for new and old hops. Prices are firm. Currency—Midland East Kents, 70s, 100s, 140s; Weald Kents, 65s, 75s, 84s; Sussex, 63s, 70s, 80s.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, Feb. 27.—During the past week the arrivals coastwise have been light, but still equal to the demand. The trade keeps dull at last week's prices. The following are this day's quotations:—York Regents, 90s to 100s; Lincolnshire ditto, 80s to 95s; Dunbar ditto, 100s to 120s; ditto reds, 85s to 95s; Perth, Forfar, and Fifeshire Regents, 75s to 95s; ditto Rocks and reds, 70s to 80s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, March 1.—Very short supplies of home produce have come to hand at this market since our last report, and trade rather brisk, at fully previous quotations:—York Regents, from 140s to 150s; ditto Flukes, 130s to 140s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 90s to 120s; ditto Cups, 80s to 95s; Dunbars, 120s to 140s per ton.

COAL MARKET.

WEDNESDAY, Feb. 29.—Davison's West Hartley 15s—Holywell 15s 9d—St Cuthbert's Hartley 14s 6d—Tanfield Moor Bute's 13s 6d—West Hartley 15s—Wylam 16s. Wall's-end:—Acorn Close 17s 9d—Eden 17s 9d—Riddell 16s 9d—Hetton 19s 3d—South Hetton 19s—Caesop 18s 6d—Heugh Hall 17s 9d—Kelloe 18s 3d—Trimdon Hartlepool 18s 6d—Trimdon Thornley 16s 9d. Carway and Duffryn Malting 22s 6d—Powell's Duffryn Steam 22s 6d. Ships at market, 29; sold, 25.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 2.—There is a fair amount of business doing at very firm prices, and stocks of all current descriptions do not accumulate, whilst consumption is going forward at a steady rate.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 3.—Grain market quiet, but steady. Wheat quoted at Tuesday's rates, without much business. Flour quiet. Indian corn and beans a turn in buyers' favour. All other articles unaltered.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 2.—There is little change to notice this week in manufactured iron; there has, however, been a fair demand for most descriptions. The tone of the Scotch pig iron market during the week has been flat, and there has been but trifling fluctuations in price. In copper there has been some symptoms of weakness, and for yellow metal a decline of ¼d per lb has been announced. Lead still maintains its price. Most other metals remain without change.

The Gazette.

TUESDAY, Feb. 28.

BANKRUPTCY ANNULLED.

T. Glennie, Harley street, Cavendish square, lodginghouse keeper.

BANKRUPTS.

D. Cahn, Leadenhall street, merchant.
E. Newstead, Bedford street, Bedford row, licensed victualler.

EPITOME OF RAILWAY NEWS.

WEST HARTLEPOOL.—The annual meeting of this company was held on Thursday at West Hartlepool. The report stated that the receipts on revenue account for the year 1859 amounted to 197,294*l*, which, added to 2,727*l* brought from the preceding account, made the total 200,021*l* for 1859, as compared with 178,497*l* for 1858, showing an increase of 21,524*l*. Resolutions were passed adopting the report, and declaring a dividend at the rate of 4½ per cent. for the year 1859.

PUNJAB.—Since the commencement of the year 34,820*l* has been paid in anticipation of calls, to the credit of the Secretary of State for India.

SCINDE.—On Wednesday the directors of this company paid to the credit of the Secretary of State for India 68,125*l* on account of capital.

MADRAS.—The traffic receipts on the open portion of this line, 96 miles in length, for the month of December last amounted to 5,205*l*, against 4,437*l* for the same month of 1858. The total receipts for the six months ending the 31st of December last have been 31,885*l*, against 21,759*l* for the corresponding half of the previous year, showing an increase of 10,126*l*, or above 46½ per cent. on the half-year, the mileage being the same.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, Feb. 27.—The railway market was slightly depressed by speculative sales, but remained good in character, the preparations for the fortnightly settlement showing a continuance of investment by the public. The rates for carrying over purchases to the next account have, with few exceptions, consequently been very moderate, and declined towards the close. The final prices were mostly below those of Saturday. There was not much doing in mines, but prices were generally firm. Miscellaneous descriptions closed about the same as on Saturday.

TUESDAY, Feb. 28.—The railway market showed a strong tendency, the supply of stock continuing very scarce, and closed at a general advance. The principal demand was for Great Northern A, which has improved more than 3 per cent. to 103 to 104. Great Northern ordinary stock, London and North-Western, Great Western, and South-Eastern were also in special request, at an average rise of ¾ per cent. In colonial descriptions, Indian guaranteed improved. Grand Trunk of Canada stock was also better at 34¾ to 35¼, while a decline took place in Buffalo and Lake Huron. Foreign shares showed rather more strength, especially Lombardo-Venetian. In American securities the shares of the New York and Erie receded, while the bonds were firmer. Mines were inactive but steady. In joint stock banks Australasia were flat, and in miscellaneous descriptions there was a rise in Canada Land.

WEDNESDAY, Feb. 29.—The railway market retained a very favourable appearance, the completion of the settlement showing extensive investments in small amounts by the public, which gradually absorbed the stock held for some time past on speculation. The floating supply continued very limited. The principal demand to-day was for Great Northern ordinary and A stocks, at a respective advance of ¾ and 1 per cent.; Lancashire and Yorkshire, and South-Eastern were also in request. There was no movement of importance in colonial descriptions, but Indian guaranteed continued firm. The foreign market also showed a better tendency, especially as regards French railways and Lombardo-Venetian. Pernambuco advanced to 1½ to 1¼ dis., and San Paulo to ¼ to ⅜ dis. In American securities, New York and Erie shares experienced a recovery. Mines were more actively dealt in, but occasionally exhibited a decline. No change occurred in joint stock banks.

THURSDAY, March 1.—Business in the railway market was limited, and in several descriptions a fractional decline took place. Foreign shares were dull; Lombardo-Venetian, Northern of France, and Paris and Lyons were quoted lower; Pernambuco closed 1½ to ¼ dis.; and San Paulo, ⅜ to ½ dis. No change of importance occurred in American securities, mines, or joint stock banks. In miscellaneous descriptions the demand for Marine Insurance shares continued the prominent feature, and a further rise took place, Ocean Marine closing 3½ to ½ pm.; Universal, ¾ to 1 pm.; and London and Provincial, ⅜ to ½ pm. The new Canadian loan was last quoted 2 to ¼ pm. scrip, and 100⅜ to ⅝ bonds; Victoria debentures (new), 111½ to 112; and Bank of Turkey, ¾ to ¼ dis.

FRIDAY, March 2.—The railway share market to-day exhibits a general reduction, in sympathy with that in Consols. Eastern Counties stock has declined ½ per cent.; South-Eastern and Lancashire and Yorkshire ¼ per cent.; and most of the other principal descriptions about ¼ per cent. London and North-Western stock is now quoted 97½ to 98, ex div.; Great Western, 68½ to 69, ex div.; Midland, 109 to ½, ex div.; Lancashire and Yorkshire, 98½ to 99, ex div.; South Eastern, 89 to ½; Great Northern, 108 to 109, ex div.; Eastern Counties, 55½ to 56, ex div., and London and South-Western, 91¼ to 92½. Lombardo-Venetian shares have declined to 1 9-16 to 1 11-16 prem. The downward tendency extends to several other foreign lines. Grand Trunk of Canada stock has declined; East Indian railway stock is also rather more offered.

DEATH.

On the 11th Feb., at Newark, New Jersey, Eliza, wife of Mr Samuel Drury, late of Battersea, in her 49th year.

The Economist's Railway and Mining Share List.

IMPORTANT STANDARD BOTANICAL WORK
WITH NATURE-PRINTED PLATES.
Complete, price 6l 6s, half-bound, in Imperial Folio, with 51 plates.

THE FERNS OF GREAT BRITAIN

and IRELAND. Nature-Printed by HENRY BRADBURY. With full descriptions of the Species and Varieties, by THOMAS MOORE, F.L.S.; Edited by Dr LINDLEY.

"In the magnificent work written by Mr MOORE, edited by Dr LINDLEY, and illustrated by Mr HENRY BRADBURY, we find the solution to the problem how to make Nature herself paint her own portraits with the most scrupulous fidelity... .....We have here, on fifty-one large plates, pictures of all our British kinds of Ferns, with their principal variations of form presented to us with precisely the same appearance as would be exhibited if the living species were placed flat upon sheets of white paper. The mere tyro may identify in a few minutes any species by simply placing the living leaf side by side with its portrait, which reproduces it in the minutest detail and in its natural dimensions. In turning over the beautiful plates, it is hard to say which is most to be admired—the elegance and delicacy of the objects represented, the almost miraculous fidelity with which they have been produced, or the ingenuity and patience by which such results have been obtained. Not merely the forms, but the delicate veining of the foliage, and the fruit-heaps on the fertile leaves are brought clearly out; the veins, indeed, appear more distinctly than in the real objects, and in this respect are an assistance to the botanist in deciphering, as it were, the Fern itself.....Though the Volume on the British Ferns is what the French term an ouvrage de luxe, and, as such, deserves a place in the drawing-room wherever a love of Nature exists, it is not alone valuable for its pictorial merits. The text which accompanies the plates is written by one whose knowledge of the British Ferns is surpassed by none, and whose views on their classification are just and sensible."—QUARTERLY REVIEW.

Bradbury and Evans, 11 Bouverie street.

KEATING'S COUGH LOZENGES.

—Statistics shew that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; be, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Caiuscross, near Stroud, Gloucestershire.—Sir, —Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, sir, your most obliged servant, W. J. TRIGG."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

NO MORE MEDICINE.—

For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD —Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Sherland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hœmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS

on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of all booksellers.

ANOTHER CURE OF LONG-

STANDING ASTHMA by Dr LOCOCK'S PULMONIC WAFERS.—"Caldicot, February 3, 1860. Sir, —I was afflicted for years with a most violent asthma, with shortness and difficulty of breathing, and at times a cough so bad as to cause me violent vomiting. I had been ill some years, and tried nearly all the medical men about here. I found relief almost immediately, and have followed my employment ever since. JAS. GARDNER, market gardener. Witness, Mr THOS. I. JONES, chemist, 5 High street, Newport." To singers and public speakers, Dr Locock's Wafers are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all druggists.

HOLLOWAY'S OINTMENT AND

PILLS.—Tumours, Scrofulous and Glandular Swellings, Abscess.—At this season of the year, while the temperature is so variable, such diseases are constantly presenting themselves in sanguine and feeble frames. All have placed within their reach the antidote to these dreadful scourges, which, at their commencement, may be readily arrested and cured; but, when neglected, resist for a long time the most appropriate remedies. Holloway's Ointment rubbed on or near the affected parts will thoroughly eradicate the cause of these maladies and expel their seed from the system. Scurvy, Scrofula, and all kindred disorders disappear before this cleansing Ointment and these purifying Pills, which cleanse and invigorate. For scurvy in every shape they are unfailing specifics.

WONDERFUL, CURIOUS, AND

INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

TEETH REPLACED.—DECAYED

TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies PATENTED INCORRODIBLE TEETH, without extracting Teeth or stumps, on his never-failing and painless principle of SELF-ADHESION, rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his OSTEOPLASTIC Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY

of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

Certain Means of Self-Cure Gratis.

THE NEW FRENCH REMEDY

as prepared by the ECOLE PHARMACIEN, PARIS, has been used by the most eminent of the Medical Faculty on the Continent for several years, with great success, and has been found a certain remedy for effectually restoring the Nervous and Debilitated to a state of vigorous Health and Manhood, when the Nervous System has been weakened by the Errors of Youth, or from any other cause. All Impediments to Marriage are speedily removed by this wonderful discovery. Full particulars forwarded gratuitously to any address, with every instruction for SELF-CURE, on receipt of a stamped directed envelope, by MONS. DUVAL, Patent Medicine Agent, Birmingham.

Just published, in 1 vol 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,

VITA VITALIS:

A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.

(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternost row; and all booksellers in town or country.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND

CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 3, and 6 till 8. Sundays from 10 till 1.

RAIL PAID TO ANY STATION IN ENGLAND.

VERY CHOICE MARSALA OR BRONTE WINE.

THOMAS NUNN and SONS have great pleasure in bringing this excellent yet economical Wine to the notice of their customers; the approvals of it continue numerous and most flattering; it is of the highest quality well matured and full-bodied, and so thoroughly clean tasted that it will go on improving for years to come; and has this advantage over Sherry, that it may be taken by the most delicate person without causing acidity in the stomach. Their selections have been made with so much care, that they have no hesitation in saying the most perfect satisfaction will accrue to every purchaser.

30s per doz. £3 14s per 6 doz. £15 10s per ¼-cask.

From THOMAS NUNN and SONS, Wine, Spirit, and Liqueur Merchants, (upwards of 43 Years Purveyors, o the Honourable Society of Lincoln's Inn,) 21 Lamb's Conduit street, Founding Hospital.

*** A Priced List of every kind of Wine, Spirit, and Liqueur sent on application.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

FURNISH YOUR HOUSE

WITH THE BEST ARTICLES

DEANE AND CO.'S FURNISHING WAREHOUSES, LONDON BRIDGE.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER

TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE

CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d

WHITE, MANUFACTURER, 228 Piccadilly, London.

ALLSOPP'S PALE OR BITTER

ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

LONDON..... At 61 King William street, City.
LIVERPOOL..... At Cook street.
MANCHESTER..... At Ducie place.
DUDLEY..... At Burnt Tree.
EDINBURGH..... At Union street lane.
GLASGOW..... At 115 St Vincent street.
DUBLIN..... At 1 Crampton quay.
CORK..... At 25 Cook street.
BIRMINGHAM..... At Temple street.
WOLVERHAMPTON At Exchange street.
WORCESTER..... At the Cross
SOUTH WALES..... At 13 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and hear merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the table can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

TRADE B/P MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—

The LANCET states, "This is superior to anything of the kind known."—It is respectfully announced that to any application by letter, Brown and Polson forward the address (for any village or town in the Three Kingdoms) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as Brown and Polson's," if the name, address, and designation are kindly communicated, such confidence will be greatly appreciated.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, and 23 Ironmonger lane, London.

OVERLAND ROUTE.—

COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3¼-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—

The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.
	£ s d	£ s d	£ s d	£ s d

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

A TOILETTE REQUISITE FOR THE SPRING.—

Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street north, Strand, W.C.

OILS, SOAPS, AND CANDLES.—

The original Depôt for LILLE COLZA OIL of the purest importation, 4s 6d per gallon, in any quantity. Household Yellow Soaps, 36s, 40s, 44s, 46s and 48s per cwt. The most durable Soaps in the trade. Store Dip Candles, 7½d per lb. Wax-wick Moulds, 8½d per lb. Price's Composites, 8d, 9d, 10d, and 11d per lb. Lists free on application. Town deliveries daily per own carts.

WHITMORE and CRADDOCK
16 Bishopsgate street within, E.C., London.
Five pounds worth of goods railway free.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality.	Medium Quality.	Best Quality.
	£ s d	£ s d	£ s d
Two dozen full-size Table Knives, Ivory handles	2 4 0	3 6 0	4 12 0
One-and-a-half dozen full-size Cheese do	1 4 0	1 14 0	2 11 0
One pair regular Meat Carvers	0 7 6	0 11 0	0 15 6
One pair extra size do	0 8 6	0 12 0	0 16 6
One pair Poultry Carvers	0 7 6	0 11 0	0 15 6
One Steel for sharpening	0 3 0	0 4 0	0 6 0
Complete Service	4 14 6	6 18 6	9 16 6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III, c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,
MAPPIN BROTHERS,
Queen's Cutlery Works, Sheffield; and
67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

N.B. Colza oil, finest quality, 4s per gallon.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates.

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Ocree Piazzas, Liverpool.

SOYER'S SULTANA SAUCE,

Relish, Succulaste, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

EAU-DE-VIE.—THIS PURE PALE

BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH

Is the only STARCH used in
HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

S. W. SILVER AND CO.,

MANAGER OF THE HOTEL—Mr G. Giovannini.

SECRETARY—R. T. Alison, Esq.

OFFICES—20 Walbrook, City.

This Company is formed for the purpose of purchasing nd enlarging the premises well known as the WEST LIFF HOTEL, FOLKESTONE, and advantageous rrangements have been made with the proprietor, who as agreed to sell to the Company the whole of this pro- erty by Mr Woodthorpe's valuation, and to take a large ortion of the purchase money in paid-up shares. Pos- ession of the property will be given to the Company on ady-day, when completion of the purchase will be ffected.

A first-class connection has already been secured to his Hotel, as certified by the books, and which, with roper management, cannot fail to be permanent. The xpenses and risk up to this time have been borne by he present proprietor, so that a well-established business ill be at once transferred to the shareholders.

The West Cliff Hotel has a south aspect, is built upon light dry soil, and is situated at the entrance of olkestone, on the London high road. Its position is ne of peculiar beauty, commanding the most delightful nd extensive sea and country views; and it is the pinion of some of the most eminent physicians of the ay that, in point of health, it stands unrivalled. Its lose proximity to the great camp at Shorncliffe must lso be looked upon as an important feature, more specially as it is understood that Government is about o purchase a considera le tract of the adjoining land or the purposes of fortifications, and for converting the amp into permanent barracks, for a large additional orce.

The Folkestone season is of long duration, commencing in the spring and lasting to a late period of autumn, and the increasing influx of visiters at this eriod is so great that large numbers are almost daily arned away for want of sufficient first-class Hotel ccommodation.

From these facts, and from the general satisfaction xpressed by visitors after a lengthened sojourn at this otel (including many of the most distinguished families nd members of the aristocracy), together with its im- ediate proximity to the Continent, the certain success f this Company is confidently relied upon.

The result of similar undertakings, whether metropoli- an or provincial, has been most satisfactory, and very arge profits upon the capital invested have been realised; t is, therefore, anticipated that with additional outlay, o render the present establishment one of a more exten- ive and complete character, the profits will be augmented, n proportion as the accommodation is increased; and he Directors of this Company believe that the West Cliff Hotel will be one of the most attractive and remu- erative investments of the day.

The present premises are held upon lease for 99 years, from Christmas 1852, at the low annual ground rent of £100, which includes a large extent of land recently added to the property. The capital is required for the purchase of the lease, furniture, plate, linen, fixtures, and other effects, and laying out the ornamental grounds to the Hotel; and for carrying out alterations, which will add at least one hundred apartments to the present building, besides providing suitable Coffee, Billiard, and Smoking Rooms, together with handsome Library and a capacious Public Salle à Manger.

The books of the Company will be made up every six months, and whatever amount of profit is thought proper to be divided will be declared at the General Meeting of Shareholders; but interest will be paid upon deposits and subscriptions from date of receipt up to the time of payment of the first dividend.

A novel system for the security of shareholders is proposed to be carried out by the Directors of this Company, and it is intended to receive shares at their par value as cash payments from shareholders who may at any time visit this Hotel. This arrangement being purely of a tontine character, presents a pleasing method to any shareholder for realising the value of his investment, whilst at the same time the interests of the remaining proprietors are greatly enhanced by every share thus cancelled.

It is considered that the present capital will be ample for all purposes, including the contemplated addition and alteration of the opposite property, more especially as the Hotel business is peculiarly one of a ready-money character; and should a further outlay be required, a special general meeting of shareholders will be convened for the consideration of the question; but in no case will the capital be increased without the sanction of the shareholders, previously obtained at such meeting.

The Directors propose to enter into arrangements with the London Bridge Railway Terminus Hotel Company, with the view of establishing a system "en-correspondence" between the two Companies, which will result in great advantages to the shareholders of both Companies.

Applications for shares to be addressed to the Secretary or Brokers of the Company. A deposit of 10s on each share applied for must be previously paid to the Bankers of the Company; and in the event of no allotment being made, the deposit money will be returned.

THE ANGLO-LUSO-BRAZILIAN ROYAL MAIL STEAM NAVIGATION COMPANY.

Incorporated under Royal Charter granted by His Majesty the King of Portugal.

Capital £400,000, in 40,000 shares of £10 each.

£1 per share to be paid on application, and £1 on allotment of the shares. No further call will be made during a period of at least two calendar months; and a period of at least one month must intervene between two successive calls. The liability of shareholders is limited to the amount of their shares.

Lisbon, 4 P. Rua Boa Vista.

This Company, formed for the purpose of establishing a line of steam service between England, Portugal, and the Brazils, and completing the essential link of communication between Milford Haven, the seaport of the Great Western and South Wales Railways, and Santos, Bahia, and Pernambuco, the seaports of the three important railways of the Brazils, has been incorporated by a Royal Charter from His Majesty the King of Portugal.

The commercial transactions between Great Britain, Portugal, and the Brazilian Empire are of immense and increasing importance, as is shown by the annual trade returns. From 1850 to 1857 our exports of British manufactured goods to the Brazils increased from £2,544,837 to £5,447,566; and the passenger traffic between Portugal and that empire, which is already very great, is constantly and largely increasing, and will be very much further developed by the railways now in course of construction.

The Brazilian ports send coffee, dye-woods, drugs, diamonds, silver, and other valuable products, to this country every year; while we import 60,000,000 lbs of coffee annually, two-thirds of which may be furnished by the Brazils, in exchange for British manufactures. These facts alone will give some idea of the present and prospective commerce between the three countries, and of the necessity of the connecting link furnished by this Company for the regular, rapid, and frequent transit of goods and passengers.

In sanctioning the formation and assuming the official position of "Protector" of the Company, His Majesty the King of Portugal fully recognises the importance of the extensive and increasing trade that exists upon the line the Directors have adopted. His Royal Highness the Duke of Oporto, His Majesty's brother, by accepting the president's chair, also gave expression to his opinion as to the importance of the undertaking.

The statutes under which the Company has been incorporated, give its vessels special advantages over those of other nations, and the Directors are assured that their ships, sailing under the Portuguese flag, will be able to command a very large share of the passenger traffic existing between Great Britain, Portugal, and the Brazils.

On the formation of this Company the attention of the Board was directed to Milford Haven, as the best port of departure from England for the South. The harbour possesses great natural advantages, it is free from port dues, and a plentiful supply of fuel, and coal of an excellent quality, can be had at all times, at a little more than one-half the price charged at other more southern ports. As an additional inducement to the Directors, the Great Western and South Wales Railway Companies afforded them great facilities for working the service—to such an extent that shippers of goods, merchants, and passengers, belonging to Bristol, Liverpool, Southampton, London, and most of the important mercantile districts of England will have the benefit, both in shipment and delivery, of greater expedition and convenience, than if the ships went direct to any of these ports. The importance of the undertaking will be further shown by the favour with which the Brazilian railways regard it, as being the great line of commercial communication between this country and the Brazils.

The Directors have entered into a contract with the Portuguese Government for a subsidy for the carriage of their mails to the Brazils, by which a payment is secured to the Company, equal to about £15,000 per annum of our money. A contract has also been entered into with Her Majesty's Postmaster-General on highly favourable terms, for the conveyance of the British mails, from this country to Portugal and the Brazils, and a subsidy will also be received from the Brazilian Government for the conveyance of their mails, equal to about £15,000 a year. In addition to these contracts, already concluded, he Company have negotiations in progress which the Directors confidently anticipate will terminate satisfactorily, and in that case the Company will be in receipt of a gross sum of £85,000 a year for postal service.

Through rates have been arranged, by which goods and passengers will be booked from all the principal cities in Great Britain, Ireland, and the Continent of Europe, so as to secure a direct transit throughout, in the most expeditious and economical manner. Although the Directors of this Company were unable to submit the undertaking to the public, or to take any steps to place the capital necessary for carrying it out, until the formalities required for its perfect registration under the Portuguese laws had been completed, they felt the necessity of occupying the line at the earliest moment, and they purchased, in the month of September last, the three fine vessels by which the service has been, up to the present time, so efficiently carried on.

The line was opened on the 3rd of October by the steamship Milford Haven. She was followed in November by the Portugal, and on the 24th of December by the Brazil. The trade of the Company's line has thereby been fairly established.

The following is an extract from the report of the Directors of the South Wales Railway to their shareholders on the 20th of February, 1860:—

"The arrangements for through booking with the Anglo-Luso-Brazilian Royal Mail Steam Navigation Company, which were adverted to at the last half-yearly meeting, have been brought into operation. One of the ships of the Company arrives at, and departs from, Milford Haven in each month.

"The traffic in connection with them has already become of material importance to this Company, and, from information which the Directors have received, they believe that the undertaking itself bids fair to be a profitable one to its promoters, and of permanent advantage to the South Wales Railway."

Applications for shares addressed to the Directors of the Company, 40, Cannon street, London, E.C., or to the Brokers of the Company, Messrs De Zoete and Edwards, 17 Throgmorton street, London; or Messrs Knight and Coleman, 1 Royal Exchange buildings, London. Each application for shares must be accompanied by a payment, at the rate of £1 per share on the number of shares applied for. If the application be not acceded to, the deposit will be returned in full.

Prospectuses may be had at the offices of the Company, and from the Brokers and Agents.

PATENT £6 6s WHEATSTONE'S 5-Octave HARMONIUM, in oak case, has double pedals, with soft agreeable quality of tone.—Manufactured by the patentees, Wheatstone and Co., 20 Conduit street, Regent street.

HOMŒOPATHIC COCOA.—TAYLOR BROTHERS' HOMŒOPATHIC COCOA is unequalled as an article of Diet for Homœopathic Patients, Dyspeptics, and Persons of delicate constitution
Sold by all Grocers, in Tin Foil Packets, at 1s 4d per lb

HARVEY'S FISH SAUCE.—Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."
6 Edwards street, Portman square, London.

AT HAMBLY HOUSE ACADEMY Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic, Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

WESTERN AUSTRALIAN

ASSOCIATION.—At an adjourned General Meeting of this Association, held at the London Tavern, on Monday the 27th day of February, it was Resolved:—"That the development of the mineral and other resources of the Colony of Western Australia having been retarded only by want of Capital (and, for which reason the large demand which has arisen for its valuable timber cannot be supplied), in pursuance of the objects of this Association a MEETING of parties interested in the subject be convened at the LONDON TAVERN, for MONDAY, the 12th day of March, at Two o'clock, in order to consider the best steps for the formation of a Company, which, by the introduction of Capital, will give an immediate impulse to the prosperity of the Colony."

In accordance with which Resolution, a Meeting will be held for such purpose at the place and time aforesaid.—By order of the Council,

ALEXANDER ANDREWS, Hon. Sec.

IN DUBLIN—Edward Fox, Esq., 51 Dame street.

OFFICES—84 King William street, City, E.C.

Detailed prospectuses and forms of application for shares may be obtained of the brokers and bankers; or at the Company's offices, 84 King William street, E.C.

Applications for shares must be accompanied with the Bankers' receipt for £1 per share in part payment of the deposit of £2 10s per share; the balance, if any, must be paid on allotment, or, in default, the amount may be forfeited, and the allotment cancelled.—By order of the Board,

A. ELBOROUGH, Secretary.

BUENOS AYRES AND SAN

FERNANDO RAILWAY COMPANY, Limited.

No further Applications for Shares will be received after Tuesday the 6th instant.—By order of the Board.

A ELBOROUGH, Secretary.

84 King William street, 1st March, 1860.

ALLEN'S PATENT

PORTMANTEAUS and TRAVELLING BAGS, with Square Opening; Ladies' Dress Trunks; Dressing Bags, with silver fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles, for home or continental travelling. Illustrated Catalogues for 1860, by post for two stamps.—J. W. ALLEN, Manufacturer of Officers' Barrack Furniture and Military Outfitter (see separate catalogue), 18 and 22 Strand, London.

MR LEWIS AND SON,

113 Strand.—The Royal Lewisian Systems of Writing, Arithmetic, Bookkeeping, and Shorthand, as taught for upwards of fifty years by Mr Lewis, the real inventor and first teacher of these world-renowned and only infallible systems, insures perfection in any of the above branches after a few easy and interesting lessons. Persons unable to take the lessons may obtain the Inventor's works for self-instruction at his only Institution, 113 Strand

FLEET STREET.

A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST,

52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

NATIONAL DISCOUNT COMPANY

(LIMITED), 35 Cornhill, London. Subscribed Capital, £2,000,000. Paid up, £385,345.

Approved mercantile bills discounted for parties properly introduced.

Money received at interest on deposit, repayable on call or at fixed periods.—By order of the Board,

RICHARD PRICE, Secretary.

Cornhill, February, 1860.

THE TRUST AND LOAN

COMPANY of UPPER CANADA. Incorporated by Royal Charter. Capital £1,000,000.

TRUSTEES.

Thomas Baring Esq., M.P. | G. Carr Glyn, Esq., M.P.

DIRECTORS.

The Right Hon. Edward Ployden Bouverie, M.P., President.

William Chapman, Esq., Deputy Chairman.

James Hutchinson, Esq.	Matthew Uzielli, Esq.
Charles Merrison, Esq.	T. M. Weguelin, Esq.
William G. Thompson, Esq.	

BANKERS—Messrs Glyn, Mills, and Co.

The Directors are prepared to grant Debentures for loans of sums of £100 and upwards, for periods of 3, 5, 7, or 10 years.

Any information required can be obtained on application to the Secretary. FRED. FEARON, Secretary.

65 Moorgate street, London.

UNION BANK OF AUSTRALIA.

London Office, 38 Old Broad street.

The Directors of this Bank grant LETTERS of CREDIT and DRAFTS on its Branches as under, viz.:—

NEW SOUTH WALES.

Sydney	Brisbane (Moreton Bay)	Orange
Bathurst		Goulbourn

VICTORIA.

Melbourne	Sandhurst	Maryborough
Geelong	Ararat	Portland
Ballarat	Castlemaine	

SOUTH AUSTRALIA.

Adelaide | Port Adelaide

VAN DIEMEN'S LAND.

Launceston | Hobart Town

NEW ZEALAND.

Auckland	Nelson	Dunedin (Otago)
Wellington	Lyttelton and	
Napier (Hawke's Bay)	Christchurch (Canterbury)	

They likewise negotiate approved Bills on the Colonies, and send out Bills for collection, the terms for which may be obtained on application at the offices of the Bank.

N.B. Letters of Credit and Drafts may also be procured of Messrs Glyn and Co., 67 Lombard street.—By order of the Board, H. W. D SAUNDERS, Secretary.

BANK OF NEW SOUTH WALES

(Established 1817, Incorporated by Act of the Colonial Legislature in 1850, and confirmed by Her Majesty in Council), 37 Cannon street, City.

The Board of Directors GRANT LETTERS of CREDIT, payable on demand, and BILLS of EXCHANGE, at 30 days' sight, on the undermentioned Establishments of the Corporation, at the rate of £101 for every £100 sterling paid here.

NEW SOUTH WALES.

Sydney	Bathurst	Rocky River

The Political Economist.

THE POPULAR VIEW OF THE REFORM BILL AND ITS REAL EFFECTS.

WHENCE does it arise that a Reform Bill which proposes to add about 80 per cent. to the constituencies of the counties and at least 40 per cent. to those of the boroughs, should have been described so universally as making insignificant changes in the electoral system of England? First, no doubt, because the change has been *discounted* by so many anticipatory measures, including proposals now formally abandoned. The grouping of the smaller boroughs suggested in the Bill of 1852 has been revived no more. The minority principle, as it was called, in the Bill of 1854, which proposed to give three members to many of the larger constituencies, while allowing only two votes to each elector, has been revived no more. The proposal to assimilate the franchise in the borough and county, which was included in Mr Disraeli's Bill of last year, has been discussed and abandoned. The "fancy" franchises, as they were called,—the savings bank and lodger's franchise,—have been discussed and abandoned. And now we have been quietly remanded to the old principle of a rental qualification, with the sole change of a reduction from 10*l* to 6*l* in boroughs, and from 50*l* to 10*l* for the occupiers' qualification in counties. The effect of this entire abandonment of all new electoral expedients must be, of course, to give a sober effect to the measure now introduced,—to give the impression that, as compared with the whole area of the Reform discussion of the last few years, the *number* at least of changes introduced are insignificant.

But there is, probably, another and better reason for the general and mistaken impression that is evidently entertained by the public as to the unimportant character of the new Bill. That Bill, as we said last week, has not and does not profess to have any principle or specific character of its own. It is simply an *instalment* yielded to the demands of the democratic party, and no doubt, when compared with the principle adopted by that party, the concession is not very great. If we are to assume implicitly that the final tendency of all liberal institutions must be to lodge the whole political power of the country in the hands of the Working Classes, as constituting the numerical majority of the nation, no doubt the new Bill, though it is a step, is not a very long step in that direction. Unfortunately, it does not even claim to be judged by any other standard. There is in it no hint of any desire or intention to place a final limit to the progress of democratic tendencies. The best that it asks for itself is to be considered as the smallest concession which it would be of any use to make,—the *minimum* price of a little quiet on the subject of constitutional machinery,—in short, the price of a truce with the democratic leaders. Thus considered, it is, no doubt, an unimportant measure;—if compared with the gigantic form of thorough-going democracy which we see faintly looming in the distance, it is but a dwarf at which no one is inclined to take alarm.

But if the provisions of the new Bill be considered in themselves, quite apart from the abandoned proposals of former Governments, and from the demands of the extreme party whom the present concession will for a time, it is hoped, silence and conciliate,—they will be found very far indeed from insignificant. We have always been the first to maintain that the Working Classes ought to be fairly represented in Parliament, which at present they certainly are not. Will this measure, or will it not, give them a fair number of representatives, if they choose to use the privileges which it will place within their reach? We believe it will. We believe that in many of the larger boroughs,—especially in those where the artisan classes are the most numerous, the command of the whole constituency will be wielded by the new class now first to be admitted,—that is, by the occupiers of houses between the present minimum qualification of a 10*l* rental, and a 6*l* rental. And, at least in the larger manufacturing towns, the artisans, properly so called, will form a very large majority indeed of the new class thus admitted. Let us explain the evidence on which we found this assertion.

In the return laid on the table of the House at the beginning of this week of the registered electors in the Parliamentary boroughs and the number of occupiers at various rentals between 10*l* and 6*l*,—it is found invariably in the large boroughs, and not unfrequently in the small ones, that the number of occupiers already apparently qualified to vote by a 10*l* qualification exceed the number of registered electors very largely,—sometimes, as in Birmingham, by more than half the whole number of occupiers so qualified, by 56 per cent. In other words, the number of registered electors are not half as numerous as the number of occupiers apparently qualified to become electors. In part, this is due to the fact that even the tenants of 10*l* houses often compound for the rates with their landlords, and so do not get the political qualification for themselves. In part, it is due to mere political indifference in not defending their rights. But, from one cause or another, it does happen that the average deduction to be made in the boroughs from the number of qualified occupiers, in order to arrive at the probable number of actual voters, is at least 27½ per cent., and sometimes much more. Now, with this explanation, let us look at the changes which the new electoral law is likely to make in some of our most

important manufacturing towns. We quote from the Parliamentary Return:—

	Registered Electors.	Occupiers at 6*l* and over.	Rate of excess of 10*l* Occupiers over registered Electors.	Number of Occupiers at 6*l*, after deducting these per centages.
Manchester	18,334	46,937	25 per cent.	35,203
Birmingham	9,222	45,582	56 —	20,056
Sheffield	7,381	21,351	14 —	18,362
Leeds	5,945	14,168	27 —	10,343
Salford	4,375	10,477	1½ —	10,320
Wolverhampton	4,025	14,399	20 —	11,519
Stockport	1,420	3,808	7 —	3,542
	50,702			109,345

We see, therefore, that in all these boroughs the newly-enfranchised class, even after making the reductions for unused qualifications, are likely to form more than one-half of the whole constituency;—in Birmingham, in Sheffield, in Salford, in Wolverhampton, in Stockport, considerably more than one-half;—in Manchester and in Leeds very nearly one-half of the whole constituency. Is it not, then, evident that in such places as these the Working Classes, properly so called, will have in the main the command of the representation under the provisions of the new Bill, if ever it should pass into law? It must be remembered that we have not selected carefully the above specimens, but that we have taken at hazard large manufacturing towns, where the artisans are known to live in considerable numbers, and where the rate of wages would certainly enable them to live in 6*l* houses. What we have shown to be true of these seven boroughs is no doubt true of most other manufacturing towns, properly so called,—that the newly-enfranchised class will have so much power as to be able to carry their own member, if they so choose. How, then, can it possibly be said that this measure is an insignificant one, if, instead of measuring it by the democratic standard, we measure it by the principle that the Bill ought to give some fair representation to the Working Classes? It will not only give them some fair representation, but will make them, we are disposed to think, a great power in the community. We find fault with the Bill, not for bestowing that power, but for fixing no limits to its indefinite extension,—for putting no bounds to a concession which, when stretched further and further, will end in wrenching all the representation out of the hands of the educated classes, as it has already done in such boroughs as Marylebone and the Tower Hamlets.

The addition to the number of voters which this Bill would make in the smaller country boroughs will be very much smaller. To show its effect in this direction, we will take at hazard what we may regard as fair specimens of the ordinary boroughs, above the class of pocket-boroughs, but yet not of the manufacturing class:—

	Registered Electors.	Occupiers at 6*l* and upwards.	Per centage of 10*l* Occupiers over registered Electors.	Number of Occupiers at 6*l* after reducing by these per centages.
Scarborough	1,044	1,688	16 per cent.	1,407
Winchester	835	1,506	12.5 —	1,318
Lewes	697	1,231	8.5 —	1,129
Whitehaven	571	1,287	17.5 —	1,067
	3,147			4,921

It will be seen, therefore, that in such boroughs as these, the constituencies will probably be increased only by a little more than half their present bulk, and there seems to be not a few where they will not be increased nearly so much.

The tendency of the Bill, therefore, seems to be to throw much more power into the hands of the Working Classes in large manufacturing towns than in the minor boroughs. Nor could this result be complained of, if the Bill had been based on any intelligible principle that would arrest the *transfer* of political power to the hands of the Working Classes at any definite and reasonable point.

THE SAVOY DEBATES.

The tone of the discussions on Savoy is, in many respects, not quite worthy of the House of Commons. Mr Bright's speeches especially, as is usual with regard to foreign politics, are discreditable to himself and dishonourable to the House. The speech in which on Friday week he frankly avowed his profound practical indifference to the bearing of the question on the Savoyards themselves, so long as England does not involve herself in a dangerous quarrel for the purely fanciful and trivial ends of justice, was at once one of the most honest and shameless speeches with which the selfish spirit of national materialism has yet inspired any member of that House. "I say perish "Savoy," said the honourable member,—"though Savoy "believe will not perish and will not suffer,—rather than we "the representatives of the people of England should involve "the Government of this country with the people and "Government of France on a matter in which we have "really no interest whatever." Mr Bright utters boldly what many, we fear, who, like him, consider wealth and therefore peace, as the one and sufficient condition of a nation's prosperity and well-being, think without having the audacity to speak. It is impossible to withhold a sort of respect from a man who has not only no desire to conceal the most disreputable parts of his own faith, but who publishes and defends them in the boldest way; but we do say, that if an English House of Commons should ever adopt the same creed,—'perish international justice' (for that is what Mr Bright means) 'rather than that England should make any great sacrifice of wealth or life to uphold it,'—our influence in Europe will be deservedly lost, and we shall have sunk into the sordid people for which many of the continental nations even now mistake us.

The vehement cheering, however, with which Lord John Manners's spirited reply, and Lord John Russell's dignified rebuke, were received, proves that as yet there is no danger that the House of Commons will adopt this creed. We may be thankful to Mr Bright for his frank exposition of it, if only that it destroys his influence on foreign politics with the House, and warns them against a danger into which subtler tempters might beguile them. But though the House of Commons are far from according much sympathy to Mr Bright, there is an uncertainty, nervousness, a want of clear and distinct aim in their discussions on this subject, which is not dignified and not worthy of them. They distrust the Government; they distrust themselves; they do not see how far they ought, or ought not, to connect expressions of vague sentiment with willingness to support their views in practice if it should become needful; some of them incline to Mr Bright's view that they had better keep as clear as they can; some of them are disposed to rely more on the power of mere parliamentary menace; others again may be, as Mr Bright asserts, anxious or not unwilling to plunge us into all the horrors of a war with France; but none of the independent members appear to us to have taken the true line which would at once strengthen the hands of the Government in defending the cause of justice, and yet not aggravate the perils of a certainly critical situation. We will try and lay down a few simple principles which, as it seems to us, ought to guide this discussion.

I. All the Powers of Europe are clearly bound to do more than protest against,—to prohibit by every means in the power,—any violent descent upon a country, however small which might be itself unwilling, and whose ruler should be also unwilling, to give it up into the hands of another more powerful. To prevent such a piece of rapacity England *ought* to go to war, and would find plenty of powerful allies. It would not only be her highest duty, but her interest to do so; for such an act, if successful, could only be the initiation of a long series of similar acts that would plunge all Europe in misery. But of such an act there is, as far as we know, no danger at all in the present case. The Emperor of the French is willing to abide by,—and must of course satisfy all the other Great Powers that he does honestly ascertain,—the will both of the people of Savoy and of their ruler on the question of annexation. All our action, therefore, on this head must be limited to procuring full guarantees that the will of both the King of Sardinia and of the people of Savoy has been fairly and honestly ascertained.

2. But there is a further question at issue no doubt,—which is beyond the jurisdiction both of the people and of the present ruler of Savoy,—the question, how far any addition so formidable a State as France on the frontiers of Italy is compatible with the peace of Europe and the legitimate independence of Italy. This is a question affecting all Europe, and can by no means be made to depend on the wishes of Victor Emmanuel or of the Savoyards. Were England to negotiate with the Ottoman Empire and the people of Egypt for a transfer of Egypt to the British Crown,—even with the full consent of both the Porte and the Egyptian people,

France, we may be sure, would interfere and say 'This ought 'not to be.' The Great Powers of Europe have exactly the same right,—and it might become their duty,—in the case of Savoy and Nice. The simple question to be considered is, how far it is or is not true that the strength gained by Sardinia to the South of the Alps is a fair makeweight,—an equivalent check,—on the aggressive capacity of France, to the military strength lost on the North by the proposed cession of Savoy. We say this is a fair question for discussion among the Powers of Europe, a question to the discussion of which France certainly cannot properly object. It is the only plea which she herself puts forward as her justification in claiming Savoy. But it is clearly a question not for France alone, but for all who are interested in maintaining the States of Europe in tranquillity. If the military advantage of holding Savoy is more than an equivalent for the increased power of Sardinia,—the Powers of Europe may fairly protest against, or do more than protest against,—they may fairly prohibit it as an act of aggrandisement. And, as we said last week, it is pretty certain that there will be no fair equivalent to the cession of Savoy, unless Tuscany as well as the other Duchies is annexed to Piedmont. As Lord John Russell, we believe, has well put it,—the Emperor has made the annexation of the small Duchies his excuse for demanding Savoy,—and yet maintains that Tuscany unannexed will add as much strength to any possible combination against France as if annexed. But if this be true of the greater State, Tuscany, why not also of the smaller, Savoy? Why should France have admitted, after the Peace of Villafranca, that she had no claim to Savoy, because a federation would *not* be as strong as a united kingdom,—and yet now maintain that the separation of Tuscany could make no difference to Sardinia? Either the admissions made after Villafranca were not only disinterested, but unjust to France,—or the assumption now that Tuscany, even if separate, will add as much strength to Piedmont as it would if united, is very unjust to Sardinia.

We think, then, it may fairly be made a condition, *sine quâ non*, of England's consent to the annexation, that Sardinia should be strengthened on the opposite side of the Alps by the annexation of Tuscany as well as the other Duchies. The interesting discussion in the Prussian Chamber of Deputies, which we have all read this week, proves that Prussia as well as England conceives that any solid gain of strength to Sardinia is for the interest of Europe in general,—and the annexation of Savoy to France quite contrary to those interests. If, then, we are ever to acquiesce in the latter, we ought to demand the accomplishment of the former. France cannot expect Europe to permit her to gain a command of the Alps, unless the kingdom which is likely to defend them is far stronger and more united than the present kingdom of Piedmont.

THE VOLUNTEER MOVEMENT AND ITS REACTION ON POLITICS.

The Volunteer Movement has this week received a kind of recognition from the throne, which will, we trust, tend much to ensure its permanence. We do not, of course, suppose that had this movement received no such recognition, it would have been in danger of dying away; but only that, at least in its infancy, and before the habits which it involves can become the permanent habits of Englishmen, it is most fortunate that there should be no room for any rankling feeling in the minds of the volunteers that sacrifices of their time and money, really unusual as yet, are not fully appreciated by our rulers. Before many years are passed, if there is no relaxation of effort, it is probable that the physical exercise of the rifle volunteer will have become so welcome and so necessary to the nation at large, that there will be no disposition to abandon the training even during time of profound peace. Yet at present, at all events, we cannot but feel that the movement is not very deeply-rooted;—that the entire removal of risk might at any time operate to dissipate the zeal which feeds it.

We should regret this, of course, for the military reason that England would be far less safe in case of any sudden peril. But we should be inclined to regret it still more for the loss which the abandonment of the movement would, as we believe, involve to the political spirit of the country. It is a great thing for the mass of Englishmen to feel that they personally contribute something to the safety and independence of the nation at large. It is a great thing in a political point of view. There is a great danger, especially to a commercial nation, that, as civilisation advances, what we call national spirit may decline. There is danger of the different sections of the nation becoming isolated; of that "division of labour,"—on which civilisation is apt to pique itself too much,—tending to destroy the sense of national unity;—leaving politicians to transact the politics, merchants to look after the commerce, professional men to attend to the working of the law and the health of the community, and soldiers and sailors to guard it from attack. All the progress of science, all the rapid growth of the arts, all the various complexity of modern life, tends to augment this danger. Not only are there artisans who are employed all their lives entirely in manufacturing pins' heads, but there are plenty of highly cultivated men who devote all their lives to intellectual pin-points,—who bring all their skill and zeal to bear on the minutest subjects, and scarcely meddle with anything at all outside these subjects. It is clear that, in the face of all these tendencies, there is not a little danger of the nation ceasing to realise its nationality,—ceasing to recognise the real unity which binds together its most widely-separated parts. And what can tend to restore this feeling more powerfully than such a movement as this volunteer movement, in which every man gives up something of private gain, or selfish enjoyment, in order to contribute to the safety and well-being of the whole,—in which the artisan and the shopkeeper, the lawyer, the merchant, the literary man, all unite for the same purpose, and are conscious that they are contributing equally, and not more than equally, to the same end? The sense of nationality cannot but be fostered by this habitual withdrawal of men's attention from the engrossing interests of private ends, and fixing it on the great end necessary to our national welfare.

But the volunteer movement will not only, as we believe, foster the *national* spirit, the sense of unity in the nation, it will also foster what we may call the public spirit,—the spirit, that is, of independence, or more properly of self-dependence, which is the truest safeguard of liberty. There is not a little danger that this feeling, strong as it is in almost every Englishman as far as regards his individual and family life, may gradually cease to influence the sphere of politics. Among the higher classes especially, and now, we fear, even among the higher section of the middle classes, there has been, till lately, a growing indifference as to the discharge of political duty,—a conservative apathy,—a reluctance to enter deeply into political morality,—a disposition to drift with the tide. Now it seems to us, that if anything can rouse the cultivated portion of the nation out of this condition, it will be a movement which brings so closely home to each the true nature of self-government,—which daily reminds the volunteer that the only security for a healthy national life is the scrupulous fidelity and devotion of each unit in the nation,—that indifference and *pococuranteism* is fatal to all national vitality.

Moreover, the movement can scarcely fail to create a deeper interest and more active thoughtfulness with regard to political questions. It is not likely that those who sacrifice so much time and thought for the well-being of the nation, will omit to devote some little constant attention to the way in which national affairs are managed by their representatives and rulers. It cannot be a matter of indifference to men who are training themselves to defend their own country, to hear their representatives dealing lightly with the honour and influence of England abroad,—to hear them, for instance, exclaiming "Perish Savoy rather than that "England should get involved in a quarrel with France." Nor can it be a matter of indifference to such men to hear how the resources of the State are managed and husbanded,—to know what system of promotion is considered the most likely to secure able leaders and the reward of faithful service,—in short, to scan shrewdly for themselves the general administration of affairs.

Nor can we think that this movement, much as it will do to cherish the feeling of national unity and the independence of public spirit, is likely to be other than anti-democratic in its influence on politics. No doubt the poor man

will feel, and will be elevated by the thought, that he brings by the aid of his single arm as much aid to the State as the richest,—but this will not and cannot tend as much to spread the feeling of democratic equality among the people, as the increased sense of the importance of discipline, the value of training and experience, the necessity of guidance,—in fact, the fresh significance of natural *rank* altogether, will tend to inspire the opposite feeling. We venture to say that there is no discipline less likely to promote democratic tendencies than a soldier's discipline. Men who have learned that all the strength of a body depends upon the guiding head, will not be likely to undervalue the importance of education and culture in other departments of life, besides the military. They will see that even in politics there should be a gradation of ranks, as well as in the army;—that those who have learned and thought, ought to have more influential posts assigned them than those who have not,—and that here, as elsewhere, you cannot alter rules to meet exceptional cases;—you cannot,—because there are here and there men in the ranks better fitted to lead than are their officers to follow,—relax the proper discipline of the whole mass, and put the better educated and the better experienced on a level with the half-taught recruits of yesterday.

COUNT CAVOUR'S DESPATCH.

Of all the State-papers which the Italian question has produced in such abundance, by far the most masterly is Count Cavour's reply to M. Thouvenel's despatch recommending to Sardinia to refuse to annex Tuscany to the Sardinian Crown, and to be content with governing the Romagna as the Vicar of the Pope. A more complete reply it has seldom fallen to our lot to read. Fortunately, however, it is not a mere logical superiority which Count Cavour has attained over the French Government; he has succeeded in placing it in a position in which it will be extremely difficult to abandon Sardinia to the mercy of Austria, even should Tuscany be annexed, as still seems highly probable.

M. Thouvenel's despatch had, as our readers will remember, for its object to explain to Sardinia the terms on which alone the Emperor would guarantee Northern and Central Italy against the intervention of any other Power. In case, he said, Sardinia would refuse to annex Tuscany and leave the Tuscans to choose their own ruler,—in case the King would consent to govern the Romagna as the Pope's Vicar,—in that case France would permit the annexation of Modena and Parma,—if the popular vote declared in its favour,—and would guarantee this solution against the interference of other Powers. If Piedmont would not consent to these concessions,—then the Emperor would feel liberated from all obligations to support her,—would devolve the responsibility of defending her new territory on Sardinia herself,—and the Emperor would reserve to himself full liberty to act in the matter as the interests of France and France alone should dictate. This threat, which was no doubt the most formidable of all arguments, was not unaccompanied by a show of argument. It was especially stated that the Tuscan party favourable to annexation were favourable to it only from their hostility to Austria, and that to accept their aid would be tantamount to a menace against the Venetian possessions of Austria, which the annexationist party in Tuscany would never consent to leave unassailed. The French Government urged, therefore, that only by refusing the aid of the annexationist party in Tuscany, and declining to permit annexation, could Austria be satisfied that her position in Venetia would not be attacked.

Count Cavour replies that neither in Tuscany, nor in the Duchies, nor in the Romagna, shall the will of the people be questioned. If they vote annexation, the King will not, and cannot, decline to accede, but will accept the sole responsibility of that step; if they vote against annexation, he will interfere no more. To act otherwise would be to forfeit all claim to the confidence of Italy.

But, while thus quite ready to face the contingency of losing all material support from France, Count Cavour explains the situation with admirable address in a way which will render it extremely difficult for France entirely to abandon Sardinia, if Austrian intervention should be attempted. France, he says, has repeatedly pledged herself to the principle that the choice of the populations should not be thwarted. It was one of the principles involved in the four English propositions which she accepted unconditionally. All that Sardinia is now doing is to carry out that suggestion. To call the annexation of Tuscany, in conformity with the reiterated wish of the people,—should it prove their reiterated wish,—a menace against Venetia, is to forget what Tuscany would be likely to become if left to herself. It is the moderate Conservative party, as Count Cavour points out, who are so strong for the annexation to Sardinia. If they are defeated in that wish, they will not have power enough to back a Prince of their own without any of the prestige of Sardinia. They would be obliged to fall back on aid from the Republican and Revolutionary party,—the more so as all the Catholics and Legitimists would hold aloof from a Prince chosen by popular election. The Mazzinians could not fail to find in Tuscany, thus deserted by Sardinia, their natural home,—and neither Russia, Prussia, nor even Austria would, in all probability, look with less dissatisfaction on Tuscany under the rule of a legitimist Sovereign, than on Tuscany agitated by all the forces of revolutionary violence. Count Cavour thus shows satisfactorily that the excuse put forward by France as a sufficient reason for her withdrawal of her guarantee, would certainly not be recognised as adequate by any of the European Governments. The Liberal party in Prussia, as the recent debate shows, is an earnest *advocate* for the increase of the Sardinian kingdom. Russia would certainly prefer it to any alternative of popular sovereignty. And if France should draw off and abandon Sardinia to Austria solely because Sardinia annexes Tuscany,—all Europe would know that the excuse was the merest of pretences,—that her real objection was to a step which would make the Sardinian kingdom comparatively independent of French aid,—and that, so far from conciliating Europe by isolating Tuscany, France would be the only Power in Europe to desire it.

And could France venture to act on her threat? We doubt it. We doubt whether the wise audacity of Count Cavour will really endanger Sardinia at all. It will certainly have some effect in liberating the Ministry from the galling yoke of French advisers. Suppose the vote of Tuscany given, as,—in spite of vote by ballot and universal suffrage during Lent in a country overridden by priests,—we trust it will be decisively given, for annexation to Sardinia. Suppose the Duchy annexed, and Austria to threaten invasion to restore the Archduke to his throne,—could France venture to permit it? Is it possible that even the opinion of France, much less the opinion of Europe, would permit the desertion of an ally, and the loss of all the *prestige* of liberation, on an excuse so paltry as that assigned in M. Thouvenel's despatch? Could the Emperor venture to desert Sardinia simply on the ground that she had acted in accordance with the principle throughout avowed by France, though contrary to her advice, to abide by the wish of the various populations, and had thus consolidated one United Kingdom in Northern Italy, instead of rejecting from the Union,—desirous though it was to enter it,—a single State divided by parties, quite at a loss how to act, or whom to choose, and smarting under the indignity with which its proffer of allegiance had been returned? Is it credible that public opinion in France or Europe, to which the Emperor is very sensitive, would warrant such a course? The war could never have arisen but for France. She has already claimed her reward in the province of Savoy and Nice. Is it credible she could accept this prey, and yet abandon the ally who was acting, with far better grounds, on the same principle in Italy on which France was acting in Savoy? To us it appears simply impossible. Even should France withdraw her aid, we think Sardinia might succeed unassisted, or assisted only by England in keeping out the intervention of Austria. But we do not think France could withdraw her aid. And we are sure that the Sardinian Cabinet will now act with much less constraint, that it has ventured to accept this alternative, and to declare itself ready to act even without the help of France.

THE BOARD OF INLAND REVENUE ON THE PAPER DUTY.

The Board of Inland Revenue has this week published a very instructive report on the Paper Duty, which illustrates well the difficulties attending the collection of Excise duties on English manufactures. They tell us, what we believe to be quite true, that for some time back the Excise duty on Paper has been so imposed as to interfere very little indeed with the *process* of paper-making. The ordinary and sound objection to Excise duties has been that the precautions which they involve on the part of the Excise officers are in many ways of a fettering description. It becomes needful that articles should be manufactured in a special way, in order that the legal tests may be applied to prevent any fraud upon the revenue; and deviations from, even though they be improvements upon, those methods, cannot be permitted by the Excise officer, because such deviations foil the precautions which they are obliged to take against fraud. In this way, Excise duties have usually been a very great bar to improvements of any kind. The Board of Inland Revenue, however, tell us that, in this way at least the paper duty has not acted nearly so injuriously as we might expect. They say:—

Your Lordships are aware that the intervention of the Excise officer takes place at a paper mill, for the first time, when the paper is ready to be sent out. It is then his business to weigh it, to charge the duty according to the weight, and to place round the reams labels and wrappers denoting that the charge has been made, and distinguishing them from such as have not been brought under his inspection.

These simple regulations leave the paper-maker comparatively free to adopt the best and most economical modes of working, and he can scarcely assert, as the maltsters and distillers do, that the cost of production is increased, or the quality of the manufactured article impaired, by the fetters imposed upon him for fiscal purposes.

It might seem from this that the worst difficulty of an Excise duty had been fairly surmounted in the case of the paper duty, and yet it is not so. So full are all Excise regulations of difficulty, that though the Board of Inland Revenue had fairly solved the problem of interfering as little as possible with the process of manufacture, they were only on the threshold of the difficulties with regard to it.

In the first place, difficulties arose between the paper-makers and the stationers. The paper-makers had originally been prohibited from the business of cutting envelopes at all. They were charged duty on all the paper sent out, and the stationers cut the envelopes from the paper thus charged with duty, and consequently paid duty on all the waste fragments which were cut away from rectangular sheets of paper to produce the envelopes. But in 1850 the paper-makers succeeded in getting the prohibition on their manufacture of envelopes removed; and, as a consequence, the envelopes were made at the paper mills. And, as a further consequence, these waste cuttings were no longer charged with duty, because, as they never went into consumption at all, the paper-makers were entitled to drawback on them, and the fragments were then reduced to pulp. But now the stationers came in with their complaint. This permission almost deprived them of the envelope trade, as *they* were obliged to pay duty on these waste cuttings, since they paid duty on the whole of the paper from which it was made. In the year 1857 this grievance of the stationers was considered and removed, and they also were allowed drawback on their waste cuttings, on condition that they were reduced to pulp at some paper mill in the presence of an Excise officer.

This is but a sample of the sort of difficulties under which the Board of Revenue laboured in regard to this trade. And these were increased tenfold by the resolution of the House of Commons dooming the paper duty at the first convenient season. It was then found impossible to apply to Parliament for power to subject new departments of the paper trade to Excise regulations,—and yet such new departments of the trade were constantly springing up. For instance, the card-makers are not subject to the duty, and the pasteboard-makers are, yet the card manufacture is scarcely more than nominally distinct from the pasteboard manufacture. The Board of Inland Revenue say, in apology, for not taking power to subject the card trade to Excise regulations, that, besides the difficulty caused by the resolution of the House of Commons,—they "frankly "own that they believe it to be impossible at the present "day to subject to the supervision of the exciseman any "class of traders who have hitherto been free from it."

Again, the pasteboard-maker is at a disadvantage, as compared with the scaleboard-maker, who is not exposed to this duty. Hat boxes used to be made of pasteboard, and would be so made still, were it not that pasteboard has to pay Excise duty, and scaleboard has not. The pasteboard-makers, therefore, may naturally feel aggrieved.

Again, the pasteboard-maker has to complain that the little boxes for exporting light ornamental goods to the Continent, which are best made of pasteboard, cannot be made at the requisite price on account of the Excise duty, and, consequently, these boxes are imported from Germany, and then again exported with their contents. Drawback could not be allowed on such boxes, because the amount of paper which they contain cannot easily be ascertained; and, if it could, the "tare" of the boxes cannot be ascertained when they are filled with goods for shipment.

Altogether it is obvious that the character of the grievances enforced by such a duty as the paper duty is quite too complicated for any previous calculation to measure. And this is a fair test of the general difficulty attending Excise duties, inasmuch as the paper duty certainly does interfere less with the process of manufacture than almost any other Excise duty.

This interesting report should also warn the House of Commons of the great inexpediency of such vague resolutions as that which condemned the paper duty long before it was possible to abolish it. It is obvious that this premonitory "shadow of a coming event" has seriously interfered with the duties of the Board of Revenue, and complicated the difficulties with which they had to deal.

REVIEW OF COTTON AND SPINDLES.

[COMMUNICATED.]

The alarm which has recently been raised on the subject of an adequate supply of raw cotton appears to have roused much attention. The discussions in the House of Lords, as well as in the Commons, and the numerous articles which have followed in the public journals, indicate a degree of interest which would appear to call for the disclosure of the following important facts:—

	bales		lbs
Last year the consumption of raw cotton by the manufacturers of Great Britain was	2,296 700	or	973,800,800
In 1849, now 10 years ago, it was	1,599,400	or	629,798,400
The increase in the 10 years having been 55 per cent. or...	706,300	or	344,002,400

The above progress, when explained in the language of practical life, represents an increase of consumption in the above period at the rate of 70,000 bales a year, or 1,350 bales per week. In the next place, let us have our attention directed to the amount of increase which has been going on in our spindles. In the year 1850, according to a Parliamentary return, there were in Great Britain (exclusive of Ireland) 20,858,062 spindles employed upon cotton, and having reference to the annual consumption at that period of 629,798,400 lbs, it amounts to *thirty lbs per spindle*. Therefore, if we apply this data to the cotton consumption of last year, viz., 973,800,800 lbs, we shall find that the manufacturing power we now possess is that of 32,460,026 spindles, showing an increase in the ten years of 11,601,964, or an average rate of progress of 20,718 spindles per week, and requiring a weekly supply of 1,350 bales of cotton. Meanwhile, that is to say, during the ten years in question, the principal increase of growth has been in the United States, and, large as it may appear, it has barely kept pace with the increase of demand, and the supplies held in the market have been gradually diminishing and often reduced to a very scanty amount.

FORECAST OF THE FUTURE OF SPINDLES AND COTTON.

The machinists of this country have, perhaps, never before found themselves so fully employed, and, according to information derived from them, there is now going on a greatly accelerated increase in the erection of mills and in the extent of spinning machinery in course of preparation, not alone in Great Britain, but also in all parts of Europe, as well as in the United States. The new machinery now constructing for British account has been put down at 45,000 spindles per week, which is more than a twofold rate of increase as compared with the period before referred to. These will require to be supplied with their *thirty pounds* of cotton per annum for each spindle, and at no distant day the increase of consumption for the new spindles alone will amount to not less than 160,000 bales a year, as against a rate of 70,000 bales in the last ten years, or a future supply of 3,000 bales per week, against the former rate of 1,350 bales. Let it also be borne in mind that the cotton manufacture of Great Britain constitutes only *one-half* of the consumption under our immediate notice, while the other half is carried on in the various manufacturing districts of Europe and in the United States. Now, should the like rapidity of progress of manufacture be going on in these other countries, it must be obvious that an extension of growth will very soon be required of more than 300,000 bales a year. It may be well for us to consider the practicability of raising, with the requisite speed, so large an addition to our supplies in order to meet the growing demand. Let us, therefore, as in the former case, have reference to what has already been done in the increase of cotton culture during the past ten years, and select for reference as to capability the United States, a country from

which our manufacturers are deriving nearly four-fifths of their present supplies, and in which the capabilities of extension are known to be so ample, and the energetic character of the planters so reliable.

	bales
The cotton crop of the United States of 1849-50 was.....	2,096,706
— — — 1850-51 was.....	2,355,257
— — — 1851-52 was.....	3 015,029
— — — 1852-53 was.....	3,262,882
— — — 1853-54 was.....	2.930,027

The average product of the above five years will be 2,731,980 bales, shewing a rate of annual increase over the first year of 127,055 bales.

	bales
The cotton crop of the United States of 1854-55 was.....	2,847,339
— — — 1855-56 was.....	3,527,845
— — — 1856-57 was.....	2,939,519
— — — 1857-58 was.....	3,113,962
— — — 1858-59 was.....	3,851,481

The average product of the above five years will be 3,256,029 bales, shewing a rate of annual increase over the first of the above five years of 81,740 bales.

Taking the extremes between the first and last of the above years, the difference will be 1,754,775 bales, or a rate of progress of 175,000 bales per annum. The fluctuations occurring from year to year are deserving of notice. They indicate the uncertainty which must ever impend over the future, though they do not materially obstruct the onward progress of success. It will be remarked that there is not anything decisive to be gathered from the grouping of these figures representing crops; the averages do not indicate *certainty* of production; and yet, amidst all the variations, there are marks of elasticity and of encouragement in the prospects they hold out.

The most remarkable instance of increase will be found in the two last seasons, those of 1858-59 of 3,851,481 bales, and of 1859-60 reported as upwards of 4,000,000 bales; but these crops are known to have been raised under very propitious circumstances. These greatly enlarged efforts in planting have no doubt been the result of high prices stimulating the growth, coupled, as before stated, with the advantages derived from favourable seasons. Of the future, it remains to be seen whether the command of means on the part of the planters of the United States admits of this extension of cotton culture which may be requisite to meet a demand of such enormous proportions. We know that in the capabilities of India, and also in other parts of the world, there is a wide field of wealth lying unopened to the cultivator; but hitherto there has appeared a most unaccountable apathy or indifference with regard to success.

The manufacturers of this country have now entered upon a career of progress far beyond all previous experience. Although they may rest at ease in reliance upon the existence of an adequate supply for all their wants of the present year, yet they cannot look ahead without a feeling of unusual interest for the supplies of raw material to serve for the closing months of 1861.

Agriculture.

CROSS-BREEDING.

There is probably more misapprehension in agricultural circles on the subject of cross-breeding than on any other branch of practical husbandry. The principles applicable to the subject are extremely simple, and ought to be present to the mind of every breeder, whether of pure or cross-bred stock, both cattle and sheep,—who means to attain any useful and profitable result. Cross-breeding is merely a plan of producing meat, for cross-bred animals are only profitable when bred for the butcher. They cannot be perpetuated. They are quasi-hybrids, and if used at all for the purpose of breeding, they must be coupled with one or the other of the pure breeds from which they were produced. And successful cross-breeding can only be practised after the improvement of pure breeds has made considerable progress. We hear much of advantages resulting from breeding and feeding cross-bred cattle in the North of Scotland, but what would the cross-breeders have done had not the Shorthorn and the polled Scot been brought to their present state of perfection by the persevering and discriminating efforts of the breeders of those pure-bred races. Now it is undeniable that in the hands of ordinary farmers cattle and sheep bred by crossing commonly turn out more profitable, if fed off, than pure-bred animals treated in the same way would have done. A first cross, where both parents are good of their respective kinds, seems to be the most certain mode of breeding for the butcher; and if the matter rested there, it would be well. But not a few agriculturists, finding their first crosses prove profitable, suppose they can perpetuate animals of the same character by breeding from such cross-bred stock. Every attempt of the sort has proved a failure, as a reasonable attention to the main principle of breeding, that "like will produce like," would readily show.

Nor are men of science and agricultural writers altogether exempt from the erroneous views which induce many agriculturists to waste their efforts in attempting to perpetuate cross-breeds. Much of this arises from hasty and insufficient investigation into the origin of our pure breeds of stock. Thus we find it frequently written, and more frequently said, that the Shorthorn race has been formed by a system of cross-breeding, and that Bakewell created his improved Leicester sheep by using a dash or two of Southdown blood, and the like; all which may be safely set down as amongst the popular fallacies of husbandry.

In the paper on "Cross-breeding," by Mr Spooner, M.R.C.V.S., in the recently published number of the Royal Agricultural Society's Journal, we find an ample illustration of all these fallacies, though the writer, where depending on his own observation, generally arrives at the correct conclusion. He seems, however, to be halting between two opinions, the one inclining to the fallacy that cross-breeds may be perpetuated, the other, and more correct one, that first crosses alone are successful. Keeping this in mind, we find much useful and interesting information in Mr Spooner's paper.

He commences by stating that the "natural laws by which the preservation of animal species is maintained are involved in considerable mystery," and that "experience is yet fraught with so much contrariety that attempts to lay down any certain guide on it have for the most part been received with considerable distrust." This is an over-statement of the difficulty of the subject. Mystery there may be in the origin of species, but taking our modern races of domestic animals as we find them, there is no reason to distrust the rule experience has established, that "like begets like"; and the practical result of that rule is, that improvement must be sought for by selecting good animals of the same breed, and not by any crossing of animals of different breeds. We think there is something like confusion of thought in the following passage:—"The maxim 'like begets like,' for example, is a rule having very extensive sway, yet, as propagation is the work of two parents, the respective influence of the one or the other is a matter involving considerable diversity of opinion, and prevents anything like a certain conclusion being arrived at." And then he proceeds to consider "on the very threshold of the subject, the respective influence of each parent." This he examines at considerable length, and with much interesting illustration, arriving at the conclusion that the size and contour in animals is most influenced by the male, and that the chest and vital organs and forehand generally more frequently follow the female. Now, these circumstances point with no uncertain aim to selection rather than cross-breeding as the means of animal improvement. You want an animal not only like its parents, but capable also of reproducing others like itself, and to accomplish your object you must select a male of the size and general contour you desire to reproduce, and a female of robust constitution, with capacious frame and vigorous vital organs—agriculturally speaking, a short-legged, lengthy, roomy dam.

But who with this view would think of putting two animals of different races together? The produce will be like both parents, for though the male commonly imprints his own likeness most strongly on the offspring, he by no means does so to the exclusion of the influence of the female. On the contrary, the progeny, though usually most like the sire, invariably has some decided points of resemblance to the dam. This is most obvious in cross-bred stock, because the differences between sire and dam are more striking than where both are of one breed. Mr Spooner admits the difficulty of improving "by means of crossing, and the still greater difficulty of establishing a new breed by such means." Hence it is that so many breeders "cling with superstitious tenacity to the doctrine of *purity of blood*, believing it to be the *Ark* in which alone true safety is to be found. Now, *pure-breeding*, which, when carried to an excess, is called in-and-in breeding, has its advantages as well as disadvantages," and he then goes on with illustrations which betray the confusion apparent in the passage just quoted between "pure" and "in-and-in" breeding.

It is true that a few breeders of great celebrity have bred their stock from parents very closely allied, but they have done so with great caution and judgment. The majority, however, carefully avoid in-and-in breeding, which can never be necessary with any of the established breeds of cattle and sheep in this country. He cites the Leicester flock of Mr Valentine Barford, of Foscote, near Towcester, as an instance of pure-breeding, and says that gentleman "has the pedigree of his sheep from the days of Bakewell in 1783 to the present time, and since 1810 he has bred entirely from his own stock, sire and dam, without any interchange of male or female from any other flock." And Mr Barford rather prides himself on breeding from the nearest affinities. Though his sheep are small, they have not lost any of their fecundity which is supposed to result from in-and-in breeding. But it is a mistake to note this as an instance of *pure*-breeding, for Mr Barford neglects the advantages offered to him by his fellow-breeders of Leicester sheep for the sake of preserving purity of descent from a particular flock, that of the original improver Bakewell. Surely some credit might be given to the labours of subsequent improvers of Leicesters? Yet, in a preceding passage, Mr Spooner himself shows pure-breeding not to be in-and-in breeding, where he says:—"Unless the choice is extremely confined, most of the evils of pure-breeding can be avoided by careful selection and rigorous weeding. Examples of pure-breeding are familiar to us in the race-horse, the first-class Shorthorn, and the Southdown sheep; but so far as purity of breed alone is considered, the mountain sheep of Wales, the Highland Scotch cattle, and the Shetland and Welsh cattle are equally pure; but while the latter have been propagated without care or attention, the former have, by careful selection and rigorous weeding, been considerably enhanced in value." Here we have the whole matter well stated. There is no reason why any breeder, who desires to improve Highland or Welsh cattle or Southdown sheep, should resort to in-and-in breeding for the purpose; his right course is to pursue a system of "careful selection and rigorous weeding."

There is, however, another system of stock-breeding which is in its commencement cross-breeding, but which ends, if strictly persisted in, by "crossing out" one of the original breeds with which the crossing commenced. This has taken place with sheep in several districts of the West of England, and of its history Mr Spooner gives a most interesting account. The Southdown sheep of Sussex have probably ranged over the chalk hills of the South of England from the time of the Romans, and their present state of perfection is due entirely to selection and good management. But in Wiltshire and Hampshire the original sheep were, down to the beginning of the present century, a large white-faced and horned breed. This sheep was "large, bony, narrow and active, with a large head, Roman nose, and long curly horns, high in the withers, and sharp in the spine, and the largest short-woolled breed in existence." In Wiltshire this breed was continued longer than in Hampshire, but the last flock disappeared about the year 1819. The Dorset and Somerset horned sheep of the present day are the most like the old Wiltshire horned sheep of any existing breed. Towards the latter part of the last century the Wiltshire flockmasters began to substitute Southdowns. This was done by using Sussex rams, and in many cases Sussex ewes were also purchased, so that in a few years the chief characteristics of the horned breed were merged in the Down. Thus the Wiltshire sheep have long been strictly Southdowns, though perhaps the horned blood through which many of the Wiltshire flocks were worked into Southdowns may have imparted somewhat more size than possessed by the Sussex flocks. The Wiltshire Down, however, is deemed a pure Southdown, the horned blood being considered as crossed out by the constant use of Southdown males during the last 60 or 70 years.

The Hampshire sheep-breeders took a different course. They selected the largest, coarsest, and most black-faced Sussex rams they could meet with, and after some generations they got rid of the horns, changed the colour of the face from white to black, and obtained shorter legs, broader backs, and rounder barrels, at the same time retaining the hardihood and much of the coarseness of the original horned breed. With sheep thus altered they for many years were content, and used rams of their own breeding, and so formed the Hampshire Down, whose large colossal head indicates its descent from the old horned sort. There was a large white-faced and hornless breed of sheep in Berkshire called "Notts," which are said also to have been used in Hampshire. A few farmers in that county have also used some Cotswold blood. That the Hampshire Down is a pure sheep nobody can pretend, but it is found to be a strong animal which can be profitably used for crossing with the Cotswold ram for producing heavy butcher's sheep. In Dorsetshire, the horned sheep is gradually giving way before the Southdown and its crosses. There is also the Shropshire Down, which came from the Morfe Common sheep, a native of the county, while the Oxfordshire Down is a cross between the Cotswold and Southdown, and constitutes the most modern effort to form a new race.

We recommend the following remarks, with which Mr Spooner concludes his paper, to the attention of those who resort to cross-breeding with any other view than that of feeding the first produce of that cross:—"When equal advantages can be attained by keeping a pure breed of sheep, such pure breed should unquestionably be preferred; and though crossing for the purposes of the butcher may be practised with impunity, and even with advantage, yet no one should do so for the purpose of establishing a new breed, unless he has clear and well-defined views of the object he seeks to accomplish, and has duly studied the principles on which it can be carried out, and is determined to bestow for the space of half a lifetime his constant and unremitting attention to the discovery and removal of defects." And we may add, that there is no instance of any one establishing a new breed which has attained a permanent type. Where new breeds have been established, as, for instance, the Wiltshire and Hampshire Downs, it has been the result of a general change by all the farmers of a district working in one direction; but, after all, they are but sub-varieties of a pure breed, and gradually more and more approach the characteristics of that breed.

THE CROPS AND THE SEASON.

Farmers are anxiously looking for dry weather. Seldom has the farm-work been more in arrear than it is at this time. Even on the light soils much wheat remained unsown in the autumn, while on the strong land very considerable breadths intended for wheat have yet to be seeded. And hitherto there has not been since Christmas any opportunity of preparing the land for cropping, hard frosts having alternated with heavy rains from that period. Spring wheat alone can now be sown, and, unless we can soon get upon the land, the season will be too late for a fair chance of good crops. The sowing of spring corn and pulse has been nearly as much impeded as wheat, the ground, even though well ploughed in the autumn, working very badly. Indeed, it is only on the very dry soils that any attempts at sowing have been made. In this state of things prices are rather advancing. Our farmers generally hold large stocks of wheat, and there seems some probability that they will obtain better prices for it than they have received during the last eighteen months. Live stock is generally free from disease, though the animals have been sorely tried by the inclement season, where no sufficient shed-room has been available. Provender, too, is rising in value. The turnips have been greatly injured, while the pastures, though full of grass in the autumn, have been so completely cut up by frost and wet that they have afforded the farmers but little aid towards keeping their stock throughout the winter. The crops of both hay and mangold wurtzel of last year were, however, large. The lambing season has commenced, and we hear no complaints at present. In Scotland there has been some loss of sheep from the severity of the winter; but there the lambing season will not commence just yet. Foot lameness amongst the sheep has prevailed in some districts, attributable to the great abundance of wet.

There are general complaints of the present appearance of the growing wheat crops, and they are very backward. Still we do not think much of this, for a few weeks of genial spring weather would soon make a complete change, and, after the long winter, we may fairly hope to be blessed ere long with a glimpse of real spring.

Literature.

Rural Life in Bengal: Illustrative of Anglo-Indian Suburban Life; more particularly in Connection with the Planter and Peasantry, the Varied Produce of the Soil and Seasons; with Copious Details of the Culture and Manufacture of Indigo. Letters from an Artist in India to his Sisters in England. By the Author of "Anglo-Indian Domestic Life," "Rough Notes of a Rough Trip to Rangoon," &c. Illustrated with One Hundred and Sixty-six Engravings. London: W. Thacker and Co., 87 Newgate street; W. H. Allen and Co., Leadenhall street. Calcutta: Thacker, Spink, and Co. Bombay: Thacker, Vining, and Co. 1860.

[SECOND NOTICE.]

The first half of the Fourth Chapter, on the tenure of land by natives and Europeans, the oppression of the ryots, and their bankrupt condition, is full of painful interest, and is generally correct. Since these remarks, however, were written, some very important measures have passed the Legislative Council of India, more especially Acts X. and XI. of 1859. The former of these has been framed,—like many similar Acts which have proved fruitless,—with the view of protecting the ryot, if possible, from illegal exactions, enhancement of rent, or ejection, and the other oppressions which are so notorious. The other Act has been passed to secure the holders of under-tenures or talooks, of sharers in an estate, and absent landholders, from loss, by the collusion or fraud of their agents, or co-sharers, or the zemindars from whom they hold. This at once removes one great source of risk hitherto attendant on the investment of property by Europeans in indigo concerns,—a point upon which our author lays great stress. As regards the former of these Acts, there is a natural limit beyond which legislation ceases to have any effect. We mean that the condition of the peasantry, the oppression of the zemindars or planters, and the outrages of the police, cannot wholly be the result of legislation, the existence of certain laws, or the absence of others. While the habits and character of the people are what they are, no legislation will cure the main part of the evils which we have to deplore in the case of this fertile but unhappy land. Both writers and speakers on Indian affairs are inclined to forget this, and to explain every social evil by pointing to the existence of this or the absence of that enactment. In Lower Bengal, a zemindar can always support a false claim for rent against his tenant, because at ten minutes' notice he can find a land agent to forge the necessary accounts, or witnesses to prove the claim, from among the ryot's own neighbours and fellow-tenants. The very man who has been tortured and robbed by the police, or imprisoned in the planter's or zemindar's lock-up, will probably deny the fact when questioned by the magistrate from a fear of still worse usage afterwards if he persists in making the charge. Of how little use are any laws in such a degraded social state as this! There can be no real or permanent improvement without the moral elevation of the masses through the medium of education. In Oude and the more Northern Provinces, the natural character of the people produces a better state of feeling. Their greater manliness of spirit, arising perhaps from a different physique, provides a check to oppression, so that the powers which policy has induced us to throw into the hands of the talookdars may not be abused to the extent they have been in Bengal. Certainly, we look to the character of the peasantry in Oude as a far more effectual preventive than any of the conditions inserted by Government in the grants made to the talookdars. With a degraded and spiritless population, such conditions and stipulations are but a broken reed to lean upon, as the history of legislation in Bengal only too clearly shows.

We should not omit, too, to mention that much of the indebtedness to which the ryot of Lower Bengal owes that dependent condition which places him at the mercy of zemindar or planter, arises out of his Irish-like carelessness and improvidence,—in which respect also he is very inferior to the natives of the Upper Provinces. If the Bengali ryot could but start fair and free from all debts, and

exercise thrift instead of spending two years' income in a week at every marriage in his family, he might be most prosperous. The net profits of rice cultivation,—freed from all expenses arising out of illegitimate causes, fees to the landlord's servants or the police, usurious interest, &c., &c.,—would be such as to enable him to live in comfort, and to save enough to build a brick house with land besides. As it is, his condition is but too accurately described in the following extract:—

The ryot, in order to cultivate his land, being too poor to make the first outlay, must now seek the assistance of the usurious muhâjun, or native money-lender; to whom, in order to obtain seed, advances for rent, and the various other expenses attending his little cultivation, he immediately mortgages the produce of the soil,—the crop before it is sown! He must be provided with ploughs, with bullocks, and the services of assistant ploughmen, &c., and he must *live* whilst the crop grows: but to meet all these necessities the muhâjun gives little or no money beyond what is required for *rent*. The whole system is a mere barter. He induces—I should say he compels—the poor ryot to be the purchaser of his merchandise. If he want seed to sow, the muhâjun supplies it at the shamefully usurious premium of 100 per cent. If he require rice for domestic consumption, he charges him 50 per cent.; and if he be in need of any articles, such as clothes, in which the muhâjun does not deal, he makes him a money advance, for which he is charged interest at the rate of 35 per cent.

In the author's 5th, 6th, 7th, and 8th Letters, we have an admirably clear and detailed account of the indigo cultivation and manufacture, profusely illustrated by beautiful wood-cuts. Then follows a capital sketch of the domestic life of the peasantry from childhood upwards, and the author introduces here a colloquy between a Hindoo ryot and his wife, from the pen of Mr Ward, who was one of the great missionary triumvirate at Serampore with Carey and Marshman. This Bengali "Caudle lecture" is so true to nature and so wonderfully characteristic of the Hindoo, that we cannot resist the temptation to quote it at length. As our author-artist observes, "it exhibits that Oriental eloquence of volubility which peculiarly marks the people of Bengal, and is so illustrative of their inconsistent jumble of 'wise saws' and moral reflections, with practical nonsense."

"The husband, you are to suppose, has returned home, and finding his meals unprepared, remarks, in no pleasant mood, that the cooking is not yet even begun,"—when thus the wife:—

"What unnecessary business have I been doing? I had first to put the house straight; then to give the children some cold rice; and then to prepare the 12 o'clock luncheon for your servants and visitors; what can I do alone? I have but two hands; I have not four hands."

The Husband.—"You are unable to decide betwixt right and wrong; that is, which thing should be done first, and which last. My business depends on others: I must be guided by their leisure. If I delay, of course I shall not obtain my money; but that is not all; I shall be reproached. But you are a woman, and know nothing of these things; you remain in the house; eat and sit at your ease: the washerman stands to no losses, they fall on the owner; he who suffers alone understands the loss. Others, what do they know? When money is wanted I must find it. He who has these burdens can understand their weight; but it is of no use revealing them to you. Prepare the food."

The Wife.—"You scold me without cause; you have killed ten thousand with a word; but real work is not so easy. Have I any leisure? These thoughtless children are very wicked: they mind nobody: the other day the youngest fell into the river, and after sinking several times was saved by the Gods. A short time ago, a snake bit another; and they quarrel and fight daily with other children. To follow all day such mischievous children, is to keep a herd of swine, or to lead dogs in a string. Besides me, who is there to look after them? If I leave them a day, they are like forlorn wretches left to perish in the open field. If any one else had this to do for a single day, he would throw away his garment and run away. If you have eyes, you cannot see my cares; and after working oneself to death there is no praise. Like a slave I work and eat."

The Husband.—"I ask for my food early that I might go and bring home some money. Instead of meeting my wishes, you have raised a tempest. You resemble those who, instead of doing others good, expect a reward for injuring them. The only fruit of all this noise, that I can see, is, that the day is gone. Will this uproar fill our bellies, or bring in supplies? Therefore—make haste with the food."

The Wife (very angry).—"If there should be neither money or food, what do I lose? These children are yours: this business is yours: what am I? I must work—and be reproached—this is my fate. In this world the only food is, hard labour and reproach. I cannot, nor will I either work or eat. Cannot I procure a rag to cover me, and a little food? God has given life and food too. Who supports the worm in the centre of the wood? Filth finds a place; shall there be no place for me on earth?

Husband.—"Why all these complaints? Attend to the happiness of your family."

Wife.—"You are a man; what is it to you? You will eat and serve others: you will collect something and throw it into the house: whether it meets our wants or not, you know nothing. I am obliged by a thousand contrivances to feed your family. Your children are unmanageable; they wander about like mendicants who have no home: many hands make work scarce: each can carry his own staff, but if one man has to carry the staves of many, they become a load."

Husband.—"You are a woman You go naked, though you wear a garment ten cubits long. You have no understanding:—these are the children of the Kaleb Yoo. What can be done? These childrens' faults are the opening fruits of your sins in a former birth: they are making you pay the debts you there contracted. You know nothing: your own body is not yours; you must cast it off: how then should the children cleave to you? See! your own teeth bite your tongue, and then you complain."

Wife (now speaks the mother and the woman).—"Let the children be good or bad, there is no merit in casting them off. A deranged person, if he belongs to our own family, we keep near us; while we drive away such a person if he belongs to another: our bodies, when they become a burden, we do not acknowledge to be burdensome; if our own child is even lame or blind, we love it more than the most beautiful child of another.

Husband.—"You are correct, but it is difficult to change the evil dispositions of children. A dry stick may be broken, but not bent: if a stick is bent at all, it must be when it is green; and even the younger boy you have ruined, making him do the work of women: he is at once stupid and uncontrollable, rushing forward like the buffalo: he is always in evil company, he will become a thief, and I shall be cast into prison as his protector. People pray for sons in the hope that they will serve and obey them, at death carry them to the side of the Ganges, and after death present the offerings for the repose of the soul at Gya. This boy (*he speaks ironically*) will do all this for me; but at any rate through his wickedness I am securing the daily offerings (of abuse) from my neighbours. His death would be a blessing. As for the elder boy, he will keep up the honour of the family; he has acquired the grammar and some degree of knowledge—he promises well—and weighs matters before he decides."

The Autobiography of Leigh Hunt. Smith, Elder, and Co., 65 Cornhill.

The publisher who refused to release Leigh Hunt from the engagement he had entered into of forestalling his death and becoming his own biographer judged wisely for the author's reputation, as well as for his own interest and that of the public at large. This autobiography is certainly one of the best of Leigh Hunt's numerous works; and one, we think, calculated to ensure him a wider circle of readers and a more lasting remembrance than any other. His writings, as a rule, though clever, fanciful, enriched with the results of wide reading, and marked by touches of true poetry, are of a somewhat ephemeral nature, and ill-fitted to bear

"The flight of time, and lapse of long uncounted years."

Lord Byron speaks of him as a "good man with some poetical elements in his chaos; but spoilt by Christ Church Hospital and a Sunday newspaper." Why Christ Church, which did not spoil the poetical elements of Coleridge, should have had such a baneful influence on Hunt, his Lordship does not explain. The pious scorn of a *Sunday* newspaper comes oddly enough from his pen. His whole critique of Leigh Hunt is, as Moore owns, over severe; but Hunt's earlier productions were unquestionably disfigured by affectations and conceits, which clung to his later works also, but are less than usually perceptible in this autobiography, while, by the candour and moderation of its tone, the apparent simplicity and good faith in which it is written, it carries with it the confidence and good-will of the reader.

The author, towards the close of his task, states his "sure and certain conviction that every autobiographer must of necessity be better known to his readers than to himself, let him have written as he may, and that that better knowledge is not likely to lead to his advantage." However it may be with regard to the first part of this "conviction,"—and Leigh Hunt showed himself in his writings as much or more than most men,—the second does not hold good of him. The "better knowledge" we gain of his character from this autobiography is decidedly to his advantage. It clears away many false notions and remnants of old prejudices handed down to us from the days of party strife in which his youth was cast; from the time when the battle raged high between old customs and opinions and new ideas, and when he who took an active part in public affairs could not hope to escape misrepresentation and reproach. Few of its readers, we think, will lay it down without a gentle and cordial feeling towards its writer; nor, however, disinclined to join the number of his political or literary admirers will refuse to own that he showed himself honest, fearless, and uncompromising in public, upright and amiable in private, life. The worst that can be said of him with truth is, that he held, for that day, extreme opinions with youthful ardour; and that he was careless to the verge of improvidence in money matters. Yet, if it is considered that it must have needed no small amount of laborious industry to maintain and educate a large family by the labour of his pen; and that the principles, especially that of the freedom of the press, for which the *Examiner* fought, and for which its establishers suffered fine and imprisonment, have since become the unquestioned rights of our own day,—we shall not be inclined to be severe on that worst.

Even if there had been no reasons of necessity, no fiat of relentless publishers to account for its appearance, it would yet have seemed only natural and congruous that Leigh Hunt's life should have come out written by himself. He had long established between himself and his readers a footing of easy acquaintanceship, and in this last work he does but give them a fuller insight into his tastes, feelings, and pursuits, set in a framework of the outward events of his life. On all points not trenching on the feelings or privacy of others he had great openness of disposition; this—with a not wholly unpleasant but transparent vanity, and a bookish turn of mind so decided that he rather judged of men by their conformity or otherwise to a standard raised by himself out of books, than books by their truth to life and to man—led to an identity between himself and his writings greater than is usual between an author and his works. Yet, on some points, as his son has well shown in the introduction to this new and revised edition of his father's life,

the portrait we should thus make out would not do full justice to its original. The pleasure-loving, benevolent, sensitive, enjoying nature we find in his writings, would not let us into the secret of the simple, almost ascetic habits of his daily life, or the unflagging energy, the firm spirit, with which he met all its demands. In this respect, also, the "better knowledge" given us by the autobiography is greatly to its writer's advantage.

The outward events of Leigh Hunt's life were neither many nor striking. With the exception of his early imprisonment, and his journey to Italy to establish the "Liberal" in connection with Byron and Shelley, they consisted of little beyond the customary ups and downs of a literary career; while the interest inherent in every life, however uneventful or unexciting, if fully and freely told, is greatly weakened by the *reticence* of the writer upon all purely personal or domestic matters. The interest of the book is thus made to centre too exclusively in what he wrote and what he thought; and that it holds our attention as much as it does, is owing more to the way in which it tells us of what its author was, than of what he did, or whom he knew. Those chapters headed "Literary Acquaintance," "Shelley in England," "Keats, Lamb, Coleridge," to which the reader naturally turns as of most promising appearance, are the most disappointing. They add little or nothing to what we already knew of the men of whom they speak, and with many of whom Leigh Hunt was on friendly, if not intimate terms. Even of Shelley, concerning whom, after this lapse of time, no scruples of delicacy need have interfered, we gain but little additional evidence. Some evidence, indeed, of his generosity, charitableness, and strong attachment to his friends, we do gain; but the facts brought forward are not new, nor is any fresh light thrown upon the less prominent, but perhaps not less important traits of his character. The chapters relating to Italy are pleasant to read, but rather diffuse, and chiefly noticeable for that part in which he explains his connection with Lord Byron, the misunderstandings to which it gave rise, and his regret for a hasty and public expression of irritated feelings. For our own taste we prefer the earlier chapters. The characters that moved in the little world of the book-loving but observant youth are well described and well worth describing. Such were West, the serene and courtly painter, who lived in a quiet atmosphere consecrated to his own genius; "happy because he thought himself immortal";—Boyer, the upper master and tyrant of Christ's Hospital;—the paternal Hunt, a West Indian by birth and temperament, once a lawyer in good practice in the United States, at that time an exile for the cause of Royalty, but fast turning Republican under the "struggle of existence" in England,—a man who, like Thackeray's chaplain, "after delighting his audience in the pulpit, would afterwards delight a select few no less over the bottle"; and his melancholy, timid, yet courageous and high-minded wife, who won the admiration of all on board by her calm self-possession when in imminent danger of shipwreck, yet "the sight of two men fighting in the streets would drive her in tears down another road; and I remember when we lived near the park she would take a long circuit out of the way rather than hazard the spectacle of soldiers,"—who was severe in theory, but so tender-hearted in practice that she stripped herself, on a bitter winter day, of her warmest garment to give it to an ill-clad, sickly woman, suffering ever afterwards from rheumatism, a natural consequence of the deed. These and others of the circle of his early friends are dwelt upon with a lingering affection by the autobiographer himself in advanced years; and closing a busy life, with its full share of trouble and anxiety, not in the quiet review of past storms, but still suffering under their power; still working hard for his daily bread, and declaring that "this latter portion of my life, trying soever as much of the rest of it had been, has turned out to be the most trying of the whole," till the timely pension came to relieve him from labour ill-fitted for his age, and death shortly afterwards to release him from all further toil. "Just two months before completing his seventy-fifth year he quietly sank to rest." So gentle was the final approach, that he scarcely recognised it till the very last, and then it came without terrors. His physical sufferings had not been severe; at the latest hour he said that his only "uneasiness" was failing breath. And that failing breath was used to express his sense of the inexhaustible kindnesses he had received from "the family who had been so unexpectedly made his nurses,—to draw from his sons, by minute, eager, and searching questions, all that he could learn about the latest vicissitudes and growing hopes of Italy,—to ask the friends and children around him for news of those whom he loved,—and to send love and messages to the absent who loved him." He was buried in Kensal Green Cemetery, where his wife had preceded him by a few years.

COLUMBUS; or, The New World. A Poem. By BRITANNICUS. Alfred W. Bennett, 5 Bishopsgate street without.

MEDIOCRE or bad poetry is, unfortunately, by no means rare, but a poem so bad as this by "Britannicus" is more uncommon. It is so grotesque, inflated, and silly, that after enjoying a hearty laugh over its ridiculous rhymes and bombastic periods, we are almost inclined to agree that "*les extrèmes se touchent*," and that there is positive merit in such utter absurdity, hidden wit in such deep dulness. The simple belief of the author in his own production; his cheerful delusion that he is "a writer of poetry"; the solemnity with which he tells us that a second volume is in reserve, "the issue of which may depend on the reception of the present one with the reading public," add to the amusement with which we come upon such a verse as this:—

They hinted, it is true,
A willingness to aid
A man of genius so bold:
At least that's what they said.

Or this, reminding us strongly of Mrs Leo Hunter's well-known ode:—

Shed on this memorable grave,
Which holds the ashes of a brave
And generous but erring man,
A tear;
And sympathisingly his failings scan.

Still finer is this reproof to Ferdinand of Arragon:—

Oh least magnanimous of Kings!
Was it not mean I say,
When Empire beckoned thee along,
To grudge the paltry pay,
And on thy wife the burden of
The enterprise to lay.

From these extracts it will be seen that Britannicus aims at considerable variety of metre. He "builds the lofty rhyme" in various styles and with equal skill. Perhaps his loftiest flight is in the blank verse epistles to Columbus from Ariosto, Toscanelli, Henry the Seventh, &c., with which his volume closes: these are certainly unique.

FRASER'S MAGAZINE FOR MARCH, 1860. John W. Parker.

THE March number of this admirable magazine keeps up the very high reputation it has earned. When we hear of the Cornhill novelty, brilliant as are some of its contributors, commanding a circulation of 100,000, it is easy to see that the public judge of literature more by names than by personal experience. To be sure "Fraser" is more than double the price of its younger rival, but it is also, if not quite, nearly double its bulk, and is certainly not inferior in general interest. If its fictions are not so brilliant, its graver articles are in our mind of far more permanent value and interest. The first article in the present number is of greater real interest than all the fictions Mr Trollope, much as we admire him, has ever published. It is a selection from the poet Shelley's Letters from Italy to his old friend and correspondent Thomas Love Peacock (the author of those amusing satirical novels, "Headlong Hall," "Nightmare Abbey," "Melincourt," &c.) It continues, therefore, the very valuable contributions to the Shelley biography furnished by Mr Peacock's two former papers in "Fraser" in 1858 and 1859. The importance of these papers to any one really desirous of understanding the poet's character is great.

In many respects they confirm all our previous impressions. In some respects they put in or deepen moral shadows in Shelley's character. After making full allowances for Shelley's scepticism, we have never been able to feel that his ethics on the relation between the sexes were free from a certain air of heathenish naturalism which is by no means necessarily involved in a rejection of the Christian faith. We do not for a moment mean to put him on a level with men like Lord Byron, whose sins in this respect were self-avowed, gross, and unrepented. But we do mean that the tone of Shelley's writings on this subject, if it be quite free from vicious feeling, has yet nothing in it of a spiritual or an ethical tone. His doctrine apparently enthrones natural impulse, the attraction and repulsion of the affections, however temporary, as the true law of this relation; and the consequence is, that he speaks of the worst vices as venial and inevitable. In one of these letters he speaks of the vices imputed to the wife of George IV. as "*those low tastes which prejudice considers as vices;*" and it is, we fear, too likely that, though despising and avoiding these "low tastes" himself, he was guilty of the same kind of self-indulgence which leads to them in the one great and irretrievable error of his private life.

The letters are full of pleasant as well as painful interest, and all who feel any wish to know what sort of man Shelley really was should study Mr Peacock's papers well.

Of the other papers in this excellent number of "Fraser," we may mention the pleasant essay of that agreeable essayist A. K. H. B. on the "Worries of Life, and how to meet them," and the sprightly paper on "Madame Récamier," evidently by a well-informed French hand, as possessing the greatest merit.

THE ENGLISH WOMAN'S JOURNAL. March, 1860. No. 25. 19 Langham place, Regent street.

THE "English Woman's Journal" continues to follow up its judicious plan of enforcing duties rather than of advocating rights. By thus urging upon Englishwomen the full exercise of those means of employment and opportunities of usefulness that are at present open to them, it will lay the surest foundation for the future extension of both.

This number is more than usually practical. It opens with some curious statistics as to the employment of married and single women, gathered from the census of 1851. From these it would appear that to 500,000 women marriage is an impossibility, owing to the inequality in the number of adults of the two sexes; that the number of the unmarried and unemployed was but 233,000, while the single employed amounted to 1,210,663; and these again

were increased by the addition of married women to the amount of 3,107,791 women, or almost a third of the whole female population "engaged in some description of remunerative labour."

Women, it is clear, must or will work. Miss Burdett Coutts points out a profitable and creditable employment for the middle-class girls in the national schools. She gives much useful information as to the regulations, means of appointment, education, &c.

A plea in behalf of the better pay and treatment of emigration matrons; and a life of the late Amalie Sieveking, the Miss Nightingale of Hamburg, are the most noticeable remaining articles.

BULLION MOVEMENTS TO THE EAST.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I beg to offer a few remarks on the leading points connected with the movement of silver to India and China—a feature in the bullion trade, which, from the almost gigantic proportions it has assumed since the gold discoveries, has necessarily attracted much attention. The extraordinary rapidity of the increase of exports of the precious metals to India and China of late years is shown by the following statement, viz.:—

	From GREAT BRITAIN.		From the MEDITERRANEAN.	
	Gold.	Silver.	Gold.	Silver.
	£	£	£	£

Total—From Great Britain	56,795,489
— From the Mediterranean	10,959,742
	67,755,231

The grand total (including 1859) exceeding seventy millions sterling.

That the chief impetus to this remarkable efflux was given by the great rise that took place in the price of silver in the East after the gold discoveries, there can be no doubt; and while such an important element continues to operate, the exchanges will rule at rates relatively high. Other causes also remain in operation to account partly for the high rates of exchange that have generally prevailed for so many years—both in India and China—such as the excess of exports to Europe and America over the imports of merchandise, any scarcity of money to provide for the payment of which causes the rate of exchange to rise. The necessity likewise exists of providing for the payment of American and other shipments from China on foreign account, which are chiefly negotiated under British letters of credit. The quantity of Australian bills negotiated in our Eastern markets also forms another important element in raising the rate of exchange on England.

As regards the profit arising from exchange transactions with India, it may be pointed out that silver, being the standard of value there, can always be sold without delay, in the same manner as gold here; and as the rupee, at the present price of silver in London, can be laid down in Calcutta at about 2s 0½d, it will be evident, when the rate of exchange from that city on London stands at 2s 1½d per rupee, or 6 per cent. discount, as it has done on the average during the last three years, that there is a margin for realising a considerable profit, especially as the capital so employed can be turned over at least three, and (now that the telegraph is so far in operation) occasionally four times in the course of one year. When a low rate of discount prevails at home, such operations are greatly facilitated by the immediate discount of remittances as they arrive, the proceeds thereof being thus at once available to repeat the venture.

To a certain extent the like remarks are applicable to exchange operations with China, both direct from hence and circuitously by way of India, which, of late years, have been highly remunerative; and there are various other modes of remittance, which I need not now particularise, capable of being conducted with safety and advantage.

Recent advices from Calcutta show that the trade from thence to the Australasian colonies continues to develop itself with rapidity, and the necessity for increased monetary facilities to aid the commercial community there in carrying out legitimate operations with Australia was consequently beginning to be much felt,—nearly the whole accommodation afforded to them being a monopoly in the hands of the Oriental Bank Corporation; and, as bearing rather pertinently on this point, I would here adduce the following extract of a letter recently received from a planter in the neighbourhood of Calcutta, viz.:—

"The inconvenience of the Australian trade from this port is that there is no getting advances, because the capital so engaged is locked up for seven months. I am now interested in a shipment on joint account with a Calcutta house of 100 tons sugar and 400 hhds rum to Geelong, and I pay them 10 per cent. interest, and 2½ per cent. commission on my moiety, in consideration of their advancing me 11-12ths value. There is a new India, China, and Australia Bank recently established with an agency here, which may, by following a legitimate course, ameliorate this state of things. Houses in Calcutta are ready enough to advance at 6 per cent., when they can get their money back directly ("on the nail," as the professional banking phrase has it) by bills on London, but when it comes to lying out of it for seven or eight months, they don't relish it."

The direct trade in gold from Australia to India and China has also become of decided importance, and the operations connected therewith are known to be remunerative. Two years ago the Australian banks sold their drafts at 60 days on London at 2 per cent. premium, while by sending gold dust circuitously by way of India, these institutions were enabled to lay down their own remittances in London at an extra profit, which was not inconsiderable.

Altogether, then, the trade of England in bullion and merchandise with India, China, and Australia, presents an increasing aggregate of such vast amount and importance, that there exists without doubt a most extensive field for the advantageous employment of British capital in those quarters of the world; and it seems surprising that no movement should yet have taken place in London for establishing an Exchange Company for conducting operations in the manner which I have herein endeavoured to point out. It is, of course, difficult at all times to persuade the public, both metropolitan and provincial, of the intrinsic value of any new undertaking, however legitimate it may be, unless some half dozen gentlemen amongst the upper ten thousand lay their heads together, and lead the way. There is here an opportunity which may seldom occur again, of bringing out with great *eclat* and advantage, a substantial Oriental and Australasian Exchange Company, under the Limited Liability Act (which, as regards Indian banks, has operated admirably); and I trust to see it availed of by some of the leading London merchants connected with India, China, and Australia, without unnecessary delay.—Faithfully yours,

G. H.

Glasgow, March 8, 1860.

COMMERCIAL AND MISCELLANEOUS NEWS.

Advices from Calcutta to the 10th ult. state:—The news by the English mail of the continually increasing demand for the new India Five-and-a-Half per Cent. Loan has caused unwonted excitement in our money market, the loan standing, even after the considerable advance that has lately taken place, at only 98½ in Bombay, while in London its price was, on the 18th of January, 104 to 104¼, with an upward tendency. The prospect of the enormous gain to be made by purchasing Five per Cent. securities to exchange, with half cash, for shares in the new loan, and transmitting the latter home for sale, so stimulated speculation that the Bank of Bombay was compelled, in self-defence, to raise its rates of discount 2 per cent. all round, and yet could not check the rush for investments. It is anticipated that the loan will be closed to-day, and certainly its extraordinary success has helped India through her financial difficulties. Our position at present is better than the most sanguine believers in the vitality of Indian resources could have expected, and seems even to justify Sir C. Trevelyan's hopeful assertion that we shall be able to do without any increase of taxation. It will serve as a measure of the demand for Indian securities that on January 12 Bank rates of discount were 5 per cent. on Government paper, and 7 per cent. on commercial bills. They are now 10 per cent. on the former and 12 per cent. on the latter, being an increase of 5 per cent. in one month. The Right Hon. James Wilson arrived here on the 24th of January, and a Council was held, at which some important financial questions were discussed.

We have received advices from Melbourne to Jan. 17, and from Sydney (by electric telegraph) to Jan. 16. The revenue returns for the year 1859 exhibit a highly satisfactory state of things in the Treasury. All the ordinary sources of income continue to be very prolific—subject of course to slight variations from year to year. In no instance does the aggregate revenue fall below three millions sterling, whilst last year it was nearly a quarter of a million above that amount. The general opinion is, says the *Melbourne Herald*, that our gold-fields have seen their worst, and that 1860 will show a very great increase. There has been a large number of insolvencies, but in most cases the liabilities were smal

The local markets, however, were in a most unsatisfactory state. The following are the total amounts received from the Western, Southern, and Northern gold-fields during the years 1857, 1858, and 1859 :—

	1857.	1858.	1859.
	ozs	ozs	ozs
Western	87,753	148,360	120,785
Southern	30,887	72,106	109,397
Northern	29,483	35,069	63,392
	148,126	255,535	293,574

From this statement it will be seen that there is a decline in the quantity of gold dust received from the Western gold-fields during the past year as compared with 1858 of 27,575 ozs, or 24 per cent.; but there is a considerable increase in the receipts from the Southern and Northern gold-fields,—the increase in the Southern being 37,291 ozs, or over 51 per cent.; and in the Northern 28,323 ozs, or 40 per cent. As compared with the year 1857, the increase in the yield from the Western gold-fields is 33,029 ozs, or nearly 40 per cent.; in the Southern, 78,510 ozs, or 254 per cent.; and in the Northern, 33,909 ozs, or 115 per cent. The quantity of gold dust imported into the Sydney branch of the Royal Mint during the year 1858 for the purpose of coinage was 342,430 ozs. During the past year the quantity received was 358,123 ozs, which is an increase of 15,790 ozs on the receipts of the year. The amount of gold coin issued during the year 1858 was 1,081,500 sovereigns and 486,000 half-sovereigns. Total value, 1,324,500*l*. During the year 1859 the gold coin issued was 1,065,000 sovereigns and 321,000 half-sovereigns. Total value, 1,230,500*l*. The revenue of the Mint during the year 1858 amounted to 18,148*l* 5s 3d; during the year 1859, 18,963*l* 1s 3d; increase, 814*l* 16s.

The New York accounts this week describe a favourable tendency in the rate of exchange. The quotation had risen from 108¾ to 109, and was expected to go higher, owing to the advance in the London rates of discount. Some of the leading bankers were already asking 109¼, and at 109½ gold will be shipped. The remittances were not expected, however, to be resumed on a full scale before April, when the rates of insurance will be lower. The imports of European goods into New York were large, but business was inactive.

Advices from Jamaica to the 16th ult. are, on the whole, favourable. Supply of coffee continued unequal to the demand; sales at 40s to 41s cash for ordinary, and holders demanded higher rates. Prices of sugar last quoted had been maintained, ruling at from 17s to 18s for dark, 20s for middling, and 21s to 23s for fair. Trinidad advices are to the 8th of February. There was no improvement to notice in prices, and business continued unusually dull for the season of the year. Several large sales of sugar had been made for early delivery at 4 dols per 100 lbs, and some parties refused to sell at this price, and demanded 4.25 dols. Cocoa arrived very slowly, and could not be had under 11.50 dols, some parties demanding 12 dols per 110 lbs.

The latest accounts from Buenos Ayres state that the produce market had been very active. Cattle had come forward freely, in part owing to the drought, which had induced estancieros to realise, sending in troops for slaughter on their own account. In the Plazas there had also been considerable animation, wool arriving in great abundance. Prices of last quotations were as follow :—Ox and cow hides salted, saladero, 56½ to 57, matadero, 51; salted horse hides, 17; dry (poisoned), 33; dry ox and cow hides, 65 and 63. The arrivals of wool had been chiefly second-class and inferior. Fine lots were scarce, and realised full rates—say, 90 to 110. Middle and common cases were taken chiefly by speculators at from 40 to 85. Rio advices are to the 7th of February. Extremely moderate supplies of coffee were on offer, and, in conjunction with the favourable position and prospects of the article in the various continental markets, as declared by late advices, had had the effect not only of supporting previous pretensions of dealers, but enabling them to obtain a gradual advance in prices of fully 200 rs on last quotations. The great bulk of purchases effected subsequent to the departure of the last steamer were for Europe, while the transactions for the United States, owing to the disproportion of prices in those markets and this, were comparatively of a very limited extent. Last prices paid for that quarter were 6,350 rs to 6,400 rs for assorted lots, but they were held for higher rates. Stock 100,000 bags. The following sales had been effected :—From the 7th to the 31st of January, 132,600 bags; from the 1st of February to date, 15,700; in all 148,300 bags, of which 35,200 were for the United States; 87,000 for the Channel and North of Europe; 20,500 for the Mediterranean; 5,600 for the Cape of Good Hope. Cleared in January, 39,158 bags for the United States (against 129,156 in January, 1859); 28,459 for the Channel; 2,400 for Copenhagen; 700 for Antwerp; 11,343 for Fioland; 13,167 for Marseilles; 4,900 for Gibraltar; 8,526 for Havre; 4,684 for the Cape of Good Hope; 1,736 for the River Plate; in all 115,073 bags. The intelligence received of a deficiency of sugar crops in the northern provinces had given an upward turn to prices, which in all probability would still further advance. Last sales of Campos sugar consisted of 2,000 cases brown (bought on speculation), 3,000 packages mixed qualities for home use, and 200 cases for exportation. White sugars from the north had been sold at 4,800 rs to 5,800 rs, brown at 2,800 rs to 3,600 rs; in all 77 cases and 10,831 packages, the whole for consumption. There remained in stock 1,500 cases and 600 barrels of the former, and 587 cases and 6,000 packages of the latter, besides the abovementioned 2,000 cases held on speculation.

COTTON.

New York, February 21.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with closing prices, f.o.b., with freight in sterling at current exchange :—

	Sales.	Closing.		Middling.		Freights.		F.o.b.
New Orleans... Feb. 18	72000	⅛c lower	...	10⅞c	...	9-16d eqna to		6.21d
Mobile 18	2300	—	...	10⅞c	...	¼d	—	6.02d
Charleston 17	10000	⅛c —	...	10¾c	...	7-16d	—	5.99d
Savannah 17	8000	⅛c —	...	10¾c	...	⅜d	—	5.87d
New York 21	17000	⅛c —	... Upl	11⅛c	...	7-32d	—	5.97d
Total.....	130000 bales					Average		6.0 d

There is now an excess in receipts of 533,000 bales over last year, when the crop reached 3,851,000 and of 1,559,000 bales over 1857-8 (crop 3,114,000 bales).

In the New York market business has been rather quiet for cottons on the spot, but holders have been generally firm, and prices are without material change. For cottons afloat prices have declined ⅛c to ¼c, which has caused increased activity, the sales reaching about 12,000 bales on the basis of 11c to 11⅛c for middling New Orleans with 9-16d freight. The sales on the spot amount to 5,000 bales, the market closing steadily at 11⅛c to 11¼c for middling Upland.

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years :—

	Receipts.		Exports for the Week.		
	Week's Receipts.	Since 1st Sept.	To Great Britain.	To France.	To other For. Pts.
	bales	bales	bales	bales	bales
1859-60	179000	3285000	60000	11000	19000
1858-59	125000	2752000	31000	9000	20000
1857-58	119000	1726000	83000	22000	10000
1856-57	99000	2207000	40000	15000	17000
1855-56	117000	2215000	41000	16000	18000
1854-55	77000	1528000	51000	18000	12000

	Exports Since First September.			
	To Great Britain.	To France.	To other For. Pts.	Total.	Stock.
	bales	bales	bales	bales	bales
1859-60	1363000	360000	213000	1955000	1109000
1858-59	837000	319000	254000	1410000	1103000
1857-58	632000	221000	142000	995000	670000
1856-57	638000	251000	176000	1065000	746000
1855-56	877000	296000	255000	1428000	566000
1854-55	743000	172000	131000	1046000	488000

Thus the receipts show an increase of 533,000 over those of last year, and an increase of 1,559,000 over 1857-58, and the exports exhibit the following results :—

	To G. Britain.	To France.	To other F.P.	Total.	Stock
Compared with last year	Inc.526000	Inc. 61000	Dec. 41000	Inc. 545000	Inc. 106000
Compared with 1857-8	Inc.731000	Inc.159000	Inc. 71000	Inc. 960000	Inc. 439000

Southern Markets by Telegraph.—Notwithstanding the recent favourable advices from Liverpool there has been less business doing at the South this week, and with a continuance of heavy receipts factors have been very anxious to sell. Buyers have thus obtained an advantage, and last week's prices have not been maintained. At New Orleans 72,000 bales have changed hands during the week at rather irregular rates, and at the close middling is quoted 10⅞c to 11c. The week's sales at Mobile amount to 23,000 bales, closing at 10⅝c for middling. In the Atlantic markets the business has been small, and although the demand has been chiefly for the upper grades, which are becoming somewhat scarce, prices are ⅛c lower at the close. Freights have an upward tendency at New Orleans, and at Charleston the rate is rather higher.

By telegraph we learn that the joint receipts at New Orleans and Mobile amount to 102,000 bales against 80,000 same week last year, giving a further excess for next week's tables, after which we shall begin to compare against the smaller figures of last year.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by J. C. Ollerenshaw, Esq., of Manchester.*

LIVERPOOL MARKET.—March 9.

991966	515783	522060	465240	81030	40830	829690	358610

We have again to report a dull and inactive cotton market. The buyers for export, as well as for the home trade, act with great caution; and the amount taken by the latter class is below their average consumption. There has been very little variation in prices, but in so flat a market the buyer as usual has an advantage. Egyptians have been in good demand, but a free supply has prevented any advance in prices. Brazilian without change. East India are somewhat drooping in the lower qualities, but the better are scarce and firm. The sales to-day are 7,000 bales. The market is still heavy. The reported export amounts to 6,200 bales, consisting of 4,080 American, 50 Brazil, and 2,070 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The commercial advices at hand from Calcutta, this week, being considered unfavourable, the demand for goods suitable to the Eastern markets has fallen off, but without leading to any change in prices. For shipment to the Continent, very little has been passing, but the home trade rules remarkably healthy. Iron has sold to a moderate extent, and coals have found a ready sale, at full prices. The stocks of goods are very low for the time of year

MANCHESTER, March 8.—We report a dull, slightly drooping market. Inquiries certainly have continued for Eastern staples; but, except where some advantage has been offered by selling in the way of price or delivery, they have come to nothing. For some numbers of mule ¼d and ½d less have been taken, and for shirtings 1½d per piece less has been generally quoted, but buyers are not over-willing at 3d less. For other departments no great change can be named, demand being for the time sluggish, but prices being supported by the length of engagements on hand. Our quotations are repeated.

LEEDS.—There has been only a limited attendance of merchants in the coloured cloth hall, but a fair steady business took place, principally in light summer goods. In the white market there was rather more animation, and a better business transacted. Both ordinary hair-lists and medium cloths were in good demand.——BRADFORD.—We have again had a quiet week in the wool trade. Prices continue firm, without the slightest appearance of concession, and the transactions are consequently very limited. In noils and shorts the production is taken into consumption as made, without any change in value. There is a slightly improved demand for yarns, and prices continue firm. There is rather more animation in some branches of the piece trade. Purchases have been made for America, and offers have also been made which have had the effect of imparting a better tone to the market. There is considerable inquiry for low Orleans and low mixed alpacas. In plain goods there may be said to be no alteration.——HUDDERSFIELD.—Prices are steady, and wools at the sales are going on very steadily at about old prices also.—— HALLIFAX.—There has been rather more animation in the worsted trade. Heavy goods are rather slow of sale, and manufacturers of them are checking their rate of production. The woollen trade is brisk, and the carpet trade is also in a prosperous condition.——ROCHDALE.—There is a much firmer tone in our wool operations than last week, and, compared with a fortnight ago, quotations are fully ½d higher for a round of sorts. The Yorkshire trade is very good, and more inquiry is made for linseys than of late. Scourers are much sought after, and, generally, Yorkshire makers of heavy flannel goods are most difficult to deal with.—— LEICESTER.—There continues to be a good business doing for the time of year in most branches of the hosiery trade. Manufacturers have orders on hand, and the trade generally has a healthy appearance. Both in Leicester and the neighbourhood the operatives are well engaged, and future prospects are encouraging. Yarns continue unsteady; spinners are, however, well employed. The wool market is firm, and all superior sorts continue high in price.——NOTTINGHAM.—The lace trade remains without material change, there having been very little, if any, improvement during the last few days. Buyers, both home and foreign, purchase but scantily. In the plain branch there is a little doing, plain Mechlins and Mechlin quiltings being in slight request. The fancy trade is yet quiet. The demand for silk goods is dull. There is a fair amount of business doing in hosiery; many branches are in an active state, and stocks of most descriptions of goods are low. Yarns are high in price, and are still looking up.——GLASGOW.—There has been a good steady trade done during the week. Several fairish parcels have been moved off at full prices. Black-faced laid is more inquired for, and holders of stocks are very firm in their quotations. Worsted wools are not so brisk as they were.——THE IRON TRADE.—The leading iron-masters are steadily employed on contracts entered into in the early part of the quarter.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Feb. 21.—Breadstuffs—Flour—State and Western without material change; unsound, 4 dols to 4.85 dols; superfine State, 5.10 dols to 5.20 dols; extra State, 5.30 dols to 5.45 dols; round hoop Ohio, 5.85 dols to 6 dols; superfine Western, 5.10 dols to 5.20 dols; common to good extra Western, 5.30 dols to 5.50 dols; Southern, firm; mixed to good, 5.50 dols to 5.75 dols; fancy and extra, 5.80 dols to 7 dols. Canada steady, at 5.55 dols to 6.75 dols. Grain—Wheat quiet and very firm, with trifling sales. Corn buoyant, at 77½c to 80c for inferior to prime new white and yellow, and small parcels at 80½c to 81c.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

The supplies of English wheat exhibited in the leading markets held since we last wrote, have been only moderate. For good and fine samples there has been a fair demand, at full quotations; but low and damp qualities have met a slow inquiry, at barely late rates. At the outports, foreign wheat has been held at fully last week's prices; but the transactions have been much restricted. For all descriptions of barley, the trade has continued in a healthy state. In prices, however, no change has taken place. Malt has sold heavily; nevertheless, the quotations have been supported. Oats and other kinds of produce have met a steady inquiry, on former terms.

Throughout the Continent, wheat has realised previous rates; but the demand for export purposes has continued limited. In spring corn for forward shipment, a large business has been doing, on former terms. The markets in the United States continue in a healthy state, although only limited shipments of produce continue to be made in England. The stock of both wheat and flour at New York are now much reduced. In the interior, however, the quantity of grain on hand is supposed to be verys large.

Of late, our farmers have thrashed out very little wheat; but the results of recent thrashings proves that the supplies on hand are still large. This circumstance, coupled with large quantities of foreign in warehouse, and the prospect of a speedy re-opening of the navigation in the Lower Baltic, keeps prices in check.

In Scotland, the wheat trade has continued steady, at late quotations, and there has been a fair business doing in most descriptions of spring corn on former times. The export trade is still large.

The Irish markets have been steady for wheat and oats, at full quotations. In all other produce, however, the transactions have continued very moderate.

Only a limited supply of English wheat was on offer here to-day. Good old fine samples moved off freely at very full prices; but inferior qualities were inactive. Foreign wheat was firm in price, and the value of spring corn was well supported. Flour changed hands steadily at full quotations.

Mr Ed. Rainford furnishes the following information in reference to the floating trade:—There have been 21 arrivals from ports east of Gibraltar for orders since the 2nd inst, viz:—Wheat, 2 cargoes from Taganrog, 1 Odessa, 2 Alexandria, 1 Marianople, and 1 Berdianski; maize, 2 cargoes from Ibrails, 1 Sulina, 1 Galatz, and 1 Odessa; barley, 1 cargo from Galatz, 4 Ibrails, 1 Sulina, 1 Odessa, and 1 Baltic; rye, 1 cargo from Galatz; altogether 7 cargoes of wheat, 5 maize, 8 barley, and 1 rye. Of these, about 10 cargoes had found buyers previous to arrival. There has been less doing this week in cargoes afloat. The following prices have been obtained:—Wheat, arrived, Marianople at 50s 9d, Taganrog Ghirka at 48s tale quale, and 48s half sold and half consigned; Odessa Ghirka at 47s 9d and 47s, ditto at 46s 6d delivered sound; Berdianski at 50s sea-damaged for seller's account, another cargo at 49s 3d tale quale, all per 492 lbs; Kalafat, a cargo at 44s 6d per 480 lbs; Egyptian 39s 3d per imperial quarter. Wheat, on passage, Egyptian at 39s 6d per imperial quarter. Maize, arrived, Odessa at 35s and 35s 3d per 492 lbs tale quale; now shipping, Odessa (a large cargo) at 33s 6d, ditto (a small cargo) at 34s per 492 lbs; shipped or shipping, a cargo of Port Lagos at 32s per 480 lbs; to be shipped, in a black dipthong vessel, Odessa at 32s 6d per 492 lbs. Barley, arrived, Odessa 25s, and Ibraila 26s 6d per 490 lbs. Beans, arrived, Egyptian, a small cargo at 33s per imperial quarter. Mixed cargo, arrived, consisting of Ibraila maize at 32s 10½d per 480 lbs, and Ibrails barley at 25s per 400 lbs. At the close of to-day's market there remained for sale about 6 arrived cargoes of wheat, 3 maize, 2 barley, and 4 Egyptian beans, at current rates.

The London averages announced this day were:—

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,366,807	Securities	31,047,087
Public Deposits	8,341,365	Coin and Bullion	15,220,193
Private Deposits	12,836,611		
	42,544,783		46,267,280

The balance of Assets above Liabilities being 3,722,497*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£19,957
An INCREASE of Public Deposits of	727,923
A DECREASE of Other Deposits of	951,272
No change in the amount of Government Securities.	
A DECREASE of Other Securities of	210,943
An INCREASE of Bullion of	49,172
An INCREASE of Rest of	41,621
An INCREASE of Reserve of	25,127

The rapid influx of Treasury deposits has been accompanied by a still larger withdrawal of private deposits. The "other" securities having at the same time run off, the reserve is nearly stationary. The moderate withdrawals of gold for exportation have again been fully neutralised by the reflux of coin from the provinces.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850 :—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 19,923,049	£ 19,566 760	£ 20,389,652	£ 21,212,716	£ 21,366,807

At the corresponding period of the year 1850, the quarrel between England and Greece continued. The danger of war in the direction of Switzerland had disappeared. An insurrection had broken out in Bosnia. The commercial world was quiet. Money was extremely easy.

In 1857, heavy shipments of silver were being made to the East; trade and speculation were active, and money tight.

In 1858, there was a difficulty between the English and French Governments with reference to the Conspiracy Bill. Under the influence of the agitation, the signal for which was held out by the French Government, general uneasiness was occasioned. The issue of officially-inspired pamphlets had commenced at Paris. The Bank of England *minimum* was 3 per cent., but the best bills were taken in Lombard street at 2¼.

In 1859, Prince Napoleon, who was regarded as the representative of the war party, had resigned his seat in the French Cabinet, and a pacific article had been inserted in the *Moniteur*; but the effect of these manifestations was marred by the enormous preparations for war which were still actively continued by France, Austria, and Sardinia. Extreme discouragement prevailed in financial and commercial circles at Paris.

It is worthy of remark that the distrust with which commercial people are now looking for the next development of the policy of the Emperor of the French, was felt to an equal extent in March, 1858, and in March, 1859. For the last three years trade has been subjected to incessant alarms, principally originating from one quarter.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 678,797*l*; in 1857, a deficiency of 9,579,692*l*; in 1858, a deficiency of 2,718,862*l*; and in 1859, a deficiency of 3,034,530*l*. In 1860, the deficiency is 8,117,286*l*.

The money market remained quiet until yesterday, when the bankers and money-dealers became sensible of a falling off in the supply—a feature not unusual during the month preceding the payment of the dividends. The increase in the Bank's reserve has lately amounted to a considerable sum, the variations being an increase of 586,455*l* for the week ending the 8th Feb.; an increase of 491,525*l* to the 15th Feb.; an increase of 473,292*l* to the 22nd Feb.; a decrease of 61,723*l* to the 29th Feb.; and an increase of 25,127*l* to the 7th instant. On balance there is, therefore, a total increase of 1,514,676*l* in the Bank's reserve within a period of five weeks. To a considerable extent the addition to the Bank's resources has been brought about by a diminution in those of the outer market. The latter, accordingly, has become somewhat straitened. During the earlier part of the week the best bills were discounted at 3¾ per cent., but yesterday and to-day very little business has been done below the Bank *minimum*. The alteration is somewhat sudden, but arises from legitimate causes, partly connected with the advance of the season, but entirely unconnected with any foreign drain of bullion. There is no prospect of pressure, except such as may arise through the caution imposed upon the bill-brokers by the state of their relations with the Bank of England. The unsettled feeling arising from this cause cannot have much influence at the present juncture, since the Bank's quarterly advances, repayable upon the release of the dividends, have commenced, and to these facilities the bill-brokers are admitted in common with the general commercial public.

Both yesterday and to-day, a large amount of business has been done at the Bank of England. Amongst the applications to that establishment to-day were a number for loans on English Government securities. The shutting of the transfer-books of the Reduced and New 3 per Cents. has found the dealers over-supplied with those stocks. There was, consequently, some temporary pressure for money in the Stock Exchange this afternoon.

As regards the supply of, and foreign demand for bullion, the prospect has latterly become rather more favourable. The advices by the Australian mail, just delivered, report shipments of gold to this country to the extent of 556,000*l*. Adding the 321,000*l*, advised by the previous mail and still at sea, the total on the way becomes 877,000*l*. Of this sum, 321,000*l* is now due or overdue. Meanwhile, the New York exchange, though still too low to admit of the usual remittances of gold to this side, is gradually improving, and the Continental demand for gold is only moderate. The remarkable rise which has taken place in the prices of the Government loans in India (as referred to below), is likewise calculated to arrest the importation of the rupee paper and the exportation of specie from England against it. The sudden check which has been given to the transfer of these securities from India to England ought to throw considerable light upon the question, which has been a good deal discussed of late, viz.:— To what extent was the late drain of specie and bullion to India dependent upon the importation of the native loans? During the last three or four days there have even been a number of purchases of the Government paper here, for transmission back to India, in lieu of specie.

There have been no withdrawals of gold from the Bank since the date of the return given above.

It is believed that the remittances of specie and bullion by the Bombay steamer of the 12th will be about 300,000*l*.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—The demand for gold during the past week has in a measure been met by the various small arrivals that have taken place. A sum of about 60,000*l* has been taken from the Bank, the greater part of which is for India. The City of Washington has brought 15,000*l*, and the Etna 20,000*l*, from New York; the Oneida, 28,190*l* from the Brazils, and the La Plata, 44,500*l* from the West Indies. The Kangaroo has also been reported at Queenstown, but it is not yet known whether the specie she has on board is in gold or dollars. The letters from Australia report the sailing of four more ships for England, with 580,000*l* in gold; these make the number of vessels now on the way up to nine, and we give a list of them, with the dates of their sailing, and the quantity of gold on freight by each:—The Commodore Perry, November 16, 1859, 113 days out, with 58,000*l*; Cleadon, November 30, 99 days out, with 68,000*l*; Saldanha, December 7, 92 days out, with 64,000*l*; Essex, December 8, 91 days out, with 56,000*l*; Indemnity, December 16, 83 days out, with 71,000*l*; Copenhagen, December 26, 73 days out, with 156,900*l*; Wellesley, December 26, 73 days out, with 93,700*l*; Champion of the Seas, December 30, 69 days out, with 176,000*l*; Suffolk, January 10, 1860, 58 days out, with 129,500*l*;—making a total of 873,100*l*, of which about 317,000*l* may be considered as fully due.

Silver.—The market for silver has been decidedly firm during the week at 62½d per ounce standard, at which rate a considerable amount has been sold for the steamer to Bombay of the 12th inst. The arrivals have been 3,450*l* per Sultan, from Peninsula, and 129,000*l* per La Plata, from the West Indies; this silver has been sold at 62½d per ounce standard, and we quote this price as firm for the next mail to Calcutta and China. There have also been some large sums imported from the Continent.

Mexican dollars have been in good demand. Some small amounts have been received from New York; and those brought by the La Plata have been sold at 62⅝d per oz. There are now but few on the market.

Exchange on Bombay and Calcutta, for 60 days' sight Bank bills, continues 2s 0¼d to 2s 0⅜d; little doing. Madras, 2s to 2s 0⅛d; documented bills, 1s 11¾d.

India Government Loan Notes have been very materially affected by the news from India of the closing of the 5½ per Cent. Loan at Bombay, and the consequent rise there, viz., from 92 to 98 for Fives, and from 97½ to 100½ for Fives and a Half.

The London market has responded by a rise from 97¾ to 99½ for 5 per Cents., and from 103½ to 105⅜ for 5½ per Cents.; the Fives having been purchased to some extent for re-transmission to India as remittances. The period has now arrived when supplies of these securities from India for sale in this country will cease, and this fact, coupled with the limited amount of all kinds of rupee paper known to be held in England, has made holders very firm. We quote prices this afternoon 99¼ to 99½ for 5 per Cents., and 105¼ to 105½ for 5½ per Cents.

The advices received from India this week are of great importance. The credit of the Government is rapidly improving, and the 5½ per Cent. Loan, which has been so long open, is at last closed. The Government had issued a special notification, limiting the subscriptions at Madras and Bombay respectively to 80 lacs of rupees, and leaving the rest to be subscribed at Calcutta. The list was at once filled up, and, as mentioned in the circular above quoted, a great spring immediately took place in the prices of the Government paper.

The Continental exchanges present no alteration of striking importance, but there are not many bills offering.

The monthly return of the Bank of France, extending to yesterday (Thursday, the 8th of March), shows, according to the summary received by telegraph, the following changes:—Coin and bullion—increase, 180,000*l*; bills discounted—decrease, 1,120,000*l*; notes in circulation—decrease, 1,160,000*l*; Government deposits—decrease, 720,000*l*; private deposits—increase, 760,000*l*; advances on public securities—decrease, 30,000*l*. The langour of trade in France is denoted by the increase in the private deposits and decrease in the discounts and circulation. With politics in their present unsettled state, the Emperor's invitations to confidence are fruitless.

The movement in favour of terminating banking business at two o'clock on Saturdays is making progress, the opposition being apparently limited to a few establishments. The Committee of Bankers took the matter into consideration on Monday, whence it was adjourned until Monday next, in order to ascertain the views of the joint-stock banks.

The Commodore Perry, which sailed from Melbourne for England on the 16th of November, with 58,000*l* in gold and 5,601 bales of wool, has now been at sea 114 days. Twenty guineas per cent. has been paid to effect fresh insurances.

The latest prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 3¼ to 3½ prem.; Universal Marine Insurance, ⅝ to ¾ prem.; London and Provincial Marine Insurance, 3-16 to 5-16 prem.; San Paulo (Brazilian) Railway, ½ to ¼ dis.; Bank of Turkey, 1⅜ to ⅛ dis.; City of London Brewery Preference shares, ⅝ to ⅞ prem.; Buenos Ayres and San Fernando Railway, ⅜ to ½ prem.; Folkestone West Cliff Hotel Company, ⅛ to ¼ prem.; and Anglo-Luso-Brazilian Steam, ¼ to ⅜ prem.

At Paris, this (Friday) morning, the 3 per Cent. Rentes opened at 67.70 for the account, but quickly declined to 67.65, being only 5c better than yesterday afternoon. The closing prices have not yet arrived. Compared with the final quotations of last Friday, a fall of ¼ to ⅜ per cent. is shown.

The English funds have likewise shown heaviness. The ceaseless complications of the Italian question and the French manœuvres for the acquisition of Savoy, have naturally a bad effect. Moreover, at the settlement on Wednesday, the supply of stock proved larger than was anticipated. The demand for money which has consequently been occasioned in the Stock Exchange acts as a check. Consols, which closed on Friday last at 94⅝ to ¾ for the 8th instant, descended on Wednesday to 94⅜ to ½ for the 11th April, showing an extreme fall of nearly ½ per cent. This afternoon more firmness was observable, the latest quotations being 94⅝ to ½ for money, and 94⅝, "buyers," for April. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

At this date last year, referring to the satisfactory and improving appearance of the railway interest of the kingdom, we took occasion to remark that, "had not political anxieties marred the promise of the year, it is believed that railway property, as a whole, would by this time have stood at a far higher level in the market." The Bank rate of discount is now 4 per cent. in lieu of 2½, and Consols are at only 94½ in lieu of 96, yet nearly all the leading railway stocks exhibit a marked advance. The improvement amounts to no less than 19 per cent. in South-Eastern stock, 13 per cent. in Great Western, 11 per cent. in Midland, 9 per cent. in Caledonian, 8 per cent. in Oxford and Worcester, 7 per cent. in Great Northern, but 14 per cent. in the A stock, 5½ per cent. in Lancashire and Yorkshire, 5 per cent. in London and North-Western, 2½ per cent. in North British, 1 per cent. in Berwick, and 1½ per cent. in Brighton, &c. York and North Midland and London and South-Western stocks are stationary, and Eastern Counties forms an almost solitary instance of retrogression, having declined 3 per cent. At no former period was the railway interest in so healthy a position as at the present moment.

The market for British railway stocks, which has lately experienced a great rise, has this week shared in the depression of the funds. Numerous realisations have been effected by speculative holders, and prices of most descriptions have given way. North British stock has fallen 1¾ per cent.; Great Western and Berwick, 1¼ per cent.; York and North Midland, 1½ per cent.; South-Eastern and Eastern

Counties, 1 per cent.; Great Northern, and Lancashire and Yorkshire, ½ per cent.; and London and North-Western, and London and South-Western, about ¼ per cent. Midland remains steady, and Caledonian has advanced ¼ per cent. Considering the extent of the late rise, the reaction is by no means important. The realisation of a considerable amount of speculative stock has placed the market, intrinsically, in a stronger position than before. *Bonâ fide* holders continue disinclined to sell. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

	Closing prices last Friday.	Closing prices this day.

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about ½ per mille discount, and the short exchange on London is 25.10 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422 per mark, and the short exchange on London is 13.3½ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is about 109 per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between England and America.

Imports of the week ..... 54,459 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

There was a very limited supply of English wheat on offer at Mark lane this morning. For good and fine samples the demand ruled steady, at fully Monday's currency; other qualities were a slow inquiry. Foreign wheat was held at extreme rates; but the business doing in it was trifling. Barley commanded extreme rates Malt, however, was a dull inquiry. All other kinds of produce changed hands steadily, at very full prices. The imports from abroad, this week, are 40 quarters of wheat, 6,290 barley, 10,530 oats, 10 sacks and 3,790 barrels of flour.

At Liverpool, to-day, most descriptions of produce have sold on former terms. The business done, however, has been much restricted.

The business transacted in the Liverpool cotton market during the week has been on a rather limited scale, the total sales amounting to 47,000 bales, of which 40,000 bales are to spinners, 1,000 bales on speculation, and 6,000 bales for export. The lower qualities of cotton have declined 1-16d to ⅛d per lb this week,

but in the better qualities there is no change in quotations since Friday last. To-day the market closes quiet, but steady. Sales, 7,000 bales.

"The market for cotton is firm," says a report from New Orleans, dated the 24th ult., "and the sales to-day have been 12,000 bales at 10⅝c to 11c for middling. The receipts continue on a liberal scale, and the excess at all the Southern ports over the same date last year now amounts to 604,700 bales. The exports of the week for this place have been 88,000 bales. The quotations for sterling exchange range from 8 to 8⅝ per cent. premium." At New York, on the same day, cotton sold slowly, and prices had a drooping tendency. Middling uplands was quoted at 11⅛c to 11¼c per lb.

Messrs Briggs and Co., of Alexandria, report the cotton trade as under to the 25th ult.:—

All arrivals of cotton are purchased as quickly as they appear, consequently no stock is allowed to accumulate, but in shippers' hands there are about 6,000 bales ready, which will soon be carried away by the steamers now in port. The transactions for the week amount to 4,100 bales, about the following prices, free on board, per lb:—Ordinary to middling, 8.16d to 8.56d; fair to good fair, 8 79d to 9.16d; good, 10d; fine, 12.71d. Freight by steamer is at 11-16d and 5 per cent., and by sailing ships 9-32d and 5 per cent. to 10-32d. Exchange—On London at 3 months' date, 97½ piastres per £ sterling.

There has been very little business passing in the tea market, and the public sales closed heavily at a slight reduction in value. The show of samples has not increased.

IMPORT of TEA in London, from Jan. 1 to March 1, 1860, and the STOCK on hand on March 1, 1860, compared with the corresponding date in 1859.

The sugar market has continued in a very inactive state. Compared with last week no quotable change has taken place in prices; but buyers generally have purchased with extreme caution. Refined sugars have met a dull inquiry, at barely previous previous rates. Letters from Bahia to the 11th ult. state that sugar was selling at very high prices. The stock was 1,350 tons, against 7,700 tons at the corresponding period in 1849. The shipments to late had been only 2,650 tons, against 10,500 tons last year. The crop appears to have turned out a failure, since we are informed that refiners were importing sugars from Pernambuco.

The annexed return shows the imports and stocks of produce at Hamburg:—

IMPORTATIONS from January 1 to February 29.

	1858.	1859.	1860.
Coffee, British...tons about	1,350	5,600	5,100

Cotton.....bales and serons	4,300	5,000	10,000

Nearly all descriptions of coffee have continued in steady request, at very full prices. The stock in first hands is still very limited. A commercial letter from Ceylon, dated the 30th of January, says:—

The weather during the past fortnight has been clear and dry, all that coffee planters could wish. Plantation coffee, low, 10s 9d to 11s; ditto mountain, 11s 3d to 11s 9d per bushel: native coffee, unpicked, 39s 6d to 40s 6d per cwt. Five ships have sailed for London and one for Havre, taking away 20,694 cwts of plantation coffee, and 9,089 of native—total 29,783. Our total exports of coffee since 1st October, 1859, are 183,144 cwts, a figure considerably in advance of previous years,—the excess, however, being entirely on plantation kinds, native being lower than for the last three years.

DISTRIBUTION of COFFEE CROP EXPORTED from CEYLON, from October 1, 1859, to January 28, 1860.

Cocoa has been in improved request, but the late advance in prices has not been generally supported.

The rice market has continued in a very unsatisfactory state. No actual fall has taken place in the quotations; but buyers have operated for immediate wants only.

There have been some large clearances of fruit at the reduced duties.

"We have to report a quiet market in all classes of silk," observe Messrs Durant and Co. "Prices, however, are firm in the face of the large unloadings now taking place, and the arrivals due within the next fortnight, making a probable total of about 10,000 bales of China."

The public sales of Colonial wool continue to be well attended by home buyers, who, up to this time, have purchased nearly the whole of the quantities offered at very full prices.

Hemp has changed hands freely at 28*l* per ton for Petersburg clean. In flax, very little business has been passing.

Messrs Churchill and Sim have issued the following statement of the stock of timber in the public docks on the 1st of March:—

COMPARATIVE STOCK of TIMBER at the PUBLIC DOCKS on 1st March.

	1860.	1859.	1858.
Foreign deals .....pieces	1,388,000	1,297,000	1,323,000

United States pitch pine timber	2,800	2,800	4,100
East Indian teake	4,400	17,200	6,800

For rum, the inquiry has been much restricted, and prices have been with difficulty supported. Brandy has moved off slowly on former terms.

Messrs Powell and Co. thus refer to the state of the leather trade during the past month:—

The activity which prevailed in the leather market in January has considerably abated during the past month. The demand has been of a general character, but restricted to the more immediate wants of consumers; the dealers in general having been indisposed to add to their stocks. The supplies have been limited, and no large increase has been made to the stocks of any article in the hands of factors. Prices remain as nearly as possible identical with those of January. For some articles of sole leather there has been a disposition to accept slightly lower rates, but dressing goods fully maintain our previous quotations. The market for raw goods has presented some contrast to that for leather.

Scotch pig iron has fallen to 58s 9d cash, mixed numbers. In other metals very little has been passing. The arrivals of tin, last month, were 8,043 slabs, of which only 795 were Banca, and the present stock is estimated at 880 tons.

The oil market, almost generally, has ruled steady. To-day, linseed oil has sold at 27s 6d to 27s 9d per cwt. Foreign refined rape is worth 41*l* 10s, and Gallipoli, 62*l*. Spirits of turpentine, 35s 6d to 36s 6d per cwt.

The transactions in tallow have been much restricted. To-day, P.Y.C., on the spot, has changed hands at 59s 6d, and for delivery during the last three months, 53s 6d per cwt.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—There is not any further change in the market, which continued flat during the greater part of this week, but yesterday slightly more inquiry sprung up, and sales of foreign were made to a fair extent. Arrivals have not increased, owing partly to the change of wind, and the supply of British West India keeps moderate; indeed, the public sales of all kinds have been lighter than usual. 785 hhds had sold up to yesterday evening. The stock of sugar in Great Britain is about 8,000 tons larger than last year; at this port it amounts to 51,000 tons, against 46,400 and 47,000 tons in the two preceding years. The home deliveries have been larger by about 3,000 tons.

Mauritius.—On Tuesday and Wednesday 12,500 bags were brought forward, when rather more than half sold at previous rates: from 40s to 45s 6d for low to good strong yellow; brown, 35s 6d to 38s 6d; soft yellow, 40s 6d to 42s 6d per cwt. Crystallised bought in above the value.

Bengal.—1,110 bags sold at full prices: low to good middling Gurpatta date, 38s 6d to 42s 6d; soft brown Dumma, 35s 6d; good grainy yellow "Goosery," 45s 6d to 46s per cwt.

Foreign.—758 boxes Havana, by auction, were partly disposed of at 46s to 47s 6d for fine yellow and strong grey. 1,084 bags Siam, 40s to 46s 6d for good brown to fine dry yellow. Privately, 600 casks Cuba and 130 hhds Guadaloupe have sold; the latter at 38s 6d to 39s 6d; and 4,500 bags brown Pernambuco at 36s 6d; also 250 tons unclayed Manilla at 32s per cwt.

Refined.—The market has been quiet this week, but quotations do not show any further alteration. Low goods quoted 50s 6d up to 53s for superior. Pieces and crushed keep steady.

Molasses.—Business is unimportant, owing to the limited supply. Good Antigua has sold at 17s 6d to 18s per cwt.

Rum.—There has been little done this week, and prices are about the same as before. Considerable arrivals may be expected shortly. The deliveries continue favourable.

Cocoa.—171 bags Trinidad were offered on Wednesday, when a portion sold at very high prices, viz., 76s 6d to 95s; the remainder bought in at 100s to 110s for fine marks. 130 bags Grenada sold upon easier terms: grey to fair red, 63s 6d to 69s 6d. 240 bags Guayaquil were bought in at 75s per cwt.

Tea.—The trade still manifest slight inclination to extend their purchases, and the market is quiet. At the public sales which concluded on Monday, 5,500 packages more sold, including some good common congou at 1s 5d to 1s 5½d per lb.

Coffee.—Buyers are awaiting the recent imports of Ceylon being brought forward, also the forthcoming Dutch sales; but the market is very firm, and 80 casks plantation Ceylon of the new crop realised the extreme valuations, especially for good marks, at 86s to 87s 6d; low middling to middling coloury, 69s 6d to 76s. 76 bags 102 casks native ordinary to good ordinary, 57s 6d to 60s 6d. 145 bags African were chiefly bought in at 90s to 95s. 794 bags damaged Rio brought 50s 6d to 58s. A floating cargo of St Domingo sold at 61s per cwt for the Mediterranean.

Rice is steady, and the sales of soft grain have been to a fair extent at last week's rates. Other kinds remain firm, as the duty of 4½d per cwt is to be taken off. 3,338 bags Bengal by auction were mostly bought in above the value, a small portion, consisting of Ballam, selling at 9s 6d. 7,513 bags China were held at 12s to 13s; 2,551 bags common pinky Madras at 9s 6d; and 2,534 bags old Rangoon at 7s 9d to 9s; but a great deal of the three latter sorts have since sold rather below the buying-in rates. 3,936 bags Java were withdrawn at 13s for good middling quality. Privately the transactions include good Moulmein at 9s 6d; Rangoon at 8s to 9s 4½d; old Necrancie Arracan, 9s; good white Bengal, 13s; Dacca, 10s per cwt. Yesterday, a cargo of Arracan sold at 10s per cwt for the Continent.

Imports and Deliveries of Rice to March 3, with Stock on hand.

Sago.—400 boxes middling small grain found buyers at 16s 6d. Privately, sales of sago flour have been made at 16s per cwt.

Spices.—36 cases brown nutmegs sold at previous rates: small to middling, 1s 8d to 2s 5d. 883 bags pimento went at fully ⅛d decline, from 3⅛d to 4d. Of 3,650 bags pepper, 3,000 sold at steady rates: Singapore, 4⅛d to 4⅜d; Trang (Penang), 4⅜d; good Alleppy bought in at 5⅛d to 5⅛d. 150 bags Singapore white were bought in at 7⅛d. Privately, Singapore black pepper has been disposed of at 4 3-16d per lb. 160 cases Cochin ginger realised full prices: fine quality, mixed, 91s to 93s; slight mouldy, 86s to 87s. 96 cases cassia lignea part sold at 94s to 98s for second and first pile; remainder bought in at 98s to 100s per cwt.

Saltpetre.—Fine Bengal is rather scarce, commanding full rates; but other kinds sold at 1s to 1s 6d decline, which has been since partly recovered: refraction 17 to 6¾ sold privately at 35s 6d to 39s 6d; 5 per cent. and under quoted 41s to 41s 6d. By auction, on Wednesday, 250 bags Bengal found buyers: refraction 15⅛ to 9¼, 36s to 37s per cwt.

Imports and Deliveries of Saltpetre to March 3, with Stock on hand.

Deliveries	2360	2580	1510	2900
Stock	8810	8410	8730	8360

Lac Dye is quiet. Present stock, 10,440 chests, against 12,300 and 13,450 chests in the two preceding years.

Other Drysaltry Goods.—Gambier is quiet at 16s 9d to 17s. Cutch has been neglected. A small parcel of Bengal safflower sold on easier terms: common to fair, 8*l* 10s to 10*l* 5s per cwt.

Drugs, &c.—Opium has advanced to 23s 6d per lb. A large business is reported in Kowrie gum at about 14s per cwt, slightly out of condition.

Rubber.—No change has occurred in this market, which is firm.

Metals.—There has been less business done this week, still former quotations are generally maintained. Foreign tin remains firm: Straits, 132*s*, with diminished inquiry. Spelter has sold at 20*l* 15s per ton on the spot. Copper is dull. The iron trade presents no new feature of interest. Scotch pig closes at 59s, the highest rate attained being 59s 6d per ton.

Hemp.—Further business has been done in Manilla. Russian is quiet, Less inquiry prevails for jute, but holders remain very firm. On Wednesday, 6,000 bales, by auction, went at full prices, but barely one-fourth part sold at 15*l* to 19*l* 10s per ton.

Hides.—Of 79,000 East India offered by auction yesterday, barely one-fourth sold at previous rates.

Linseed.—Floating cargoes of Azoff close at hand have sold at 50s 3d to 50s 6d, and for shipments here made up to July, 48s. The same prices have been paid for considerable quantities of Calcutta afloat. On the spot, the latter sells at 49s to 51s, and Bombay at 52s 6d to 52s 9d per quarter.

Turpentine.—Extensive arrivals of rough have occurred, also of spirits. The former quoted 9s 6d, the latter 36s 6d per cwt.

Oils.—The market for olive is firm: Gallipoli, 61*l* 10s to 62*l*; other kinds, 55*l* to 59*l*. In fish oils the principal feature to notice has been the advance required for sperm, viz., 100*l*. Good Southern is wanted at 33*l* per tun. Rather more inquiry prevails for linseed oil at 27s 6d to 28s 3d for delivery in the next three months. Rape active: foreign refined, 41s to 41s 6d; brown, 39s 6d to 40s; for delivery in the next three months, 41s 6d and 39s 6d. Cocoa-nut is in moderate request: Cochin, 45s to 45s 6d; Ceylon, 42s to 42s 6d. Palm has been dull at 46s to 46s 6d per cwt for fine.

Tallow.—Quotations have varied slightly this week until yesterday, when the market was quiet, and rather easier. First sort Petersburg Y.C., on the spot, 59s 6d to 59s 9d; for delivery in the next three months, 56s to 56s 3d; and for the last three, 53s 6d per cwt. The duty is now abolished.

Particulars of Tallow.—Monday, March 5.

POSTSCRIPT. Friday Evening.

Sugar.—There was not any material change in the sales to-day. 1,980 bags unclayed Manilla sold at 32s 6d. 192 casks crystallised Demerara and 2,330 bags Mauritius brought previous rates. Sales of West India for the week, 1,187 casks. A floating cargo of Mauritius, No. 11 to 12, sold for this kingdom at 43s.

Coffee.—1,712 bags Singapore brought 60s 6d to 63s. 100 bales Alexandria Mocha were taken in at 95s to 100s. 61 casks plantation realised 70s 6d to 73s for low middling to middling. A cargo of Rio sold at 56s 3d per cwt for a near port.

Rice.—14,860 bags partly sold at 9s 6d to 10s for good Rangoon and Moulmein.

Sago.—1,297 boxes nearly all sold at 16s to 17s 6d for bold to small and medium; good Borneo, 20s per cwt.

Sago Flour.—320 bags were bought in at 16s per cwt.

Spices.—Of 723 bags Bengal ginger, the sound was taken in at 22s 6d to 25s; a small portion only finding buyers.

Saltpetre.—Privately, Bengal, refraction 5¼ to 5¾ sold at 40s 6d to 41s; 14, 37s per cwt.

Nitrate of Soda.—2,000 bags partly sold at 15s for refraction 6¼ per cent.

Cochineal.—212 bags partly sold at full prices.

Oils.—430 casks cocoa-nut sold: Ceylon, 42s to 42s 3d; Cochin, 44s 9d to 45s 6d. 471 casks palm bought in at 44s to 46s 6d per cwt. 96 tons sperm went at 99*l* to 100*l* per tun.

Tallow quiet. Town reduced to 60s 3d per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar continues without any alteration to note worth mentioning. Nothing doing for export. The Dutch market is very quiet for crushed: 100 tons G O and B H No. 1, have been sold at 34s; also 60 tons S & T superfine at 33s 6d, all all barrels, f.o.b. in Holland.

Green Fruit.—A brisk market for all kinds, the total repeal of duty having relieved stock which was kept back until the Customs orders for free delivery was received. Some cargoes of oranges, sold by Keeling and Hunt, were taken freely by the trade. Nuts in good demand, buyers receiving the advantage of reduction of duty. Seville sours scarce, and a high price asked for those in stock. More inquiry for lemons.

Dry Fruit.—The resolutions respecting the reduced duties on fruit passed in the House of Commons on the 5th, and on the 7th instant the first payments were made. A large reduction in grocers' stocks may be looked for during the next week, as the deliveries have, since the Budget was brought forward, nearly ceased. Currants are firmly held, and though the low-priced sorts are chiefly inquired for, the better qualities are not

forgotten. Raisins are quiet, a moderate export demand showing itself, as usual, at this season. Figs are inquired for, and a fair trade has been done in Turkey and Spanish.

ENGLISH WOOL.—There is no alteration of any moment in the English wool trade. Perhaps, if anything, a rather increased demand for long wools. Prices remain as they were.

COLONIAL AND FOREIGN WOOL.—The public sales are progressing steadily at opening rates

FLAX unaltered.

HEMP.—Market steady, and a fair business doing.

COTTON.—Sales of cotton wool from Friday, March 2, to Thursday, March 8, inclusive:—400 bales Madras, at 5¼d to 5⅝d for fully good fair Tinnivelly; 268 bales Carthagens, at 2½d for ordinary seedy. The market continues extremely dull, the transactions being chiefly confined to Tinnivelly, which were sold at 5⅝d on Friday last, but have since declined ⅛d per lb, the last sale being at 5½d per lb, and at which price holders remain firm.

TOBACCO.—An improved business has been transacted in good and fine home-trade qualities. Middling and ordinary were more inquired after. A few limited sales were made for exportation.

LEATHER AND HIDES.—The activity which prevailed in the leather market in January has considerably abated during the past month. The demand has been of a general character, but restricted to the more immediate wants of consumers; the dealers in general having been indisposed to add to their stocks. The supplies have been limited, and no large increase has been made to the stocks of any article in the hands of factors. Prices remain as nearly as possible identical with those of January. For some articles of sole leather there has been a disposition to accept slightly lower rates, but dressing goods fully maintain our previous quotations. The alterations in the tariff, although unimportant as regards the leather trade, have tended for the moment to suspend business in general, and indirectly have had, no doubt, some such influence on our market; but we have every confidence that ultimately the leather and hide trades will feel, more or less directly, the benefit of the further removal of restrictions on commerce which the present changes will effect. We also look forward to a maintenance of the existing large consumption at home and for exportation. The market for raw goods has presented some contrast to that for leather. The early part of the month witnessed considerable transactions in salted hides at extreme quotations. The demand has continued, advanced rates have been paid for Australian hides, and the stocks of all descriptions of goods are extremely small. The news brought by the South American mail will, we expect, check this upward tendency. Salted River Plate Hides.—No import. The sales made at the commencemeot of last month were at extreme quotations; they amount to 8,925 hides, leaving the stock 7,704 hides, viz.:—Heavy ox, 1,157; light ox, 395; cow, 6,152: total, 7,704 hides. This stock, being chiefly of inferior quality, has attracted little notice since the period referred to. In the absence of supplies of good quality in the market, some considerable transactions have taken place in Liverpool, for arrival, at full rates. The mail, however, received yesterday, advises shipments from the River Plate of about 60,000 hides, and of cargoes loading to the extent of 158,000 more, exclusive of those which may be loading from Uruguay and other up-river-ports. These supplies, with the present dull leather trade, make the maintenance of existing rates exceedingly doubtful, and by no means confirm the advantage, always objectionable as a system, of the recent purchases for arrival.

METALS.—Only a small business has been done in metals, and that mostly at reduced prices. Copper is flat in demand, and the amount of orders in hand is materially diminished. Iron finds a quite market for all descriptions. Tin keeps firm in price and in fair inquiry for foreign, the market being bare of Banca. Spelter exhibits a flat tendency, notwithstanding some business having been done for spring arrival. Lead keeps in good favour. Tin plates show no change in prices or demand.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	60	3
Fat by ditto	3	2
Yellow Russian	60	0
Melted stuff	42	6
Rough ditto	25	0
Greaves	16	0

METROPOLITAN CATTLE MARKET.

THURSDAY, March 8.—The supply of beasts in to-day's market was only moderate; nevertheless, the demand for all kinds ruled inactive, at Monday's currency. We have to report a slow inquiry for sheep, the show of which was rather limited, yet previous rates were supported. The few lambs on offer were a dull inquiry, at from 6s to 6s 8d per 8 lbs. Calves were in short supply and steady request, at 2d per 8 lbs more money. The best veal was worth quite 6s per 8 lbs.

Per 8 lbs to sink the offal.

HOP MARKET.

FRIDAY, March 9.—Our market is very quiet, yet prices are supported.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, March 5.—During the past week the arrivals coastwise have been short, but rather heavy by rail; the trade still rules heavy at last week's prices. The following are this day's quotations:—York Regents, 90s to 140s; Lincolnshire ditto, 80s to 95s; Dunbar ditto, 100s to 120s; ditto reds, 90s to 100s; Perth, Forfar, and Fifeshire Regents, 80s to 100s; ditto reds, 75s to 80s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, March 8.—Since Monday last only moderate arrivals of potatoes have come by land conveyance, with a fair trade at the annexed prices:—York Regents, from 140s to 160s; ditto Flukes, 140s to 160s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 90s to 120s; ditto Cups, 90s to 95s; Dunbars, 120s to 140s per ton

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 10s to 4*l* 8s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 10s per load. Supply moderate, and prices ruled firm.

WHITECHAPEL.—Meadow hay, 2*l* 12s to 4*l* 8s; clover, 4*l* 0s to 5*l* 8s; and straw, 1*l* 6s to 1*l* 10s per load. A fair average supply, and a steady demand.

COAL MARKET.

Carway and Duffryn Malting 22s 6d—Powell's Duffryn Steam 22s 6d. Ships at market, 175; sold, 144.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 9.—There is a fair amount of business doing this week, although the attention of the trade is directed to the London public sales of fine colonial now in progress, and which realised about the same prices as paid in November last.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 9.—Corn market thinly attended. Wheat and flour in retail demand. Indian corn and beans held firmly at former rates. Moderate business in oats, oatmeal, and barley, without change in value.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 9.—There has been a complete absence of anything like activity during the past week in the market for manufactured iron, but prices remain unchanged. The Scotch pig iron market has been steady throughout the week, with a moderate business doing. No alteration in copper. Lead rather easier. For tin plates rather more inquiry.

The Gazette.

TUESDAY, March 6.

BANKRUPTCY ANNULLED.

EPITOME OF RAILWAY NEWS.

TRAFFIC RECEIPTS.—The traffic returns of railways in the United Kingdom for the week ending February 25 amounted to 439,864*l*, and for the corresponding week of 1859 to 422,749*l*, showing an increase of 17,115*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 184,873*l*, and for the corresponding week of last year to 180,954*l*, showing an increase of 3,919*l*.

EDINBURGH, PERTH, AND DUNDEE.—The report of the directors of this company states that the gross revenue for the half-year ending the 31st of January last amounted to 96,556*l*, and the expenditure, including 2,002*l* for taxation and Government duty, to 47,661*l*, leaving the net revenue 48,695*l*. The net revenue for the corresponding half-year ending the 31st of January, 1859, amounted to 45,891*l*, and ending the 31st January, 1858, to 44,573*l*. The gross receipts of the past half-year, as compared with the corresponding period of the preceding year, showed an increase of 6,147*l*, the working charges an increase of 3,344*l*, and the net increase 2,803*l*.

DARTMOUTH AND TORBAY.—The report of the directors stated that for the five months ending the 31st of December last the earnings of the company amounted to 772*l*, but from this sum must be deducted 428*l*, due to the South Devon Company for working expenses, leaving a net balance of 344*l*. A sum of 38*l* would be paid by the South Devon Company for interest at 4 per cent. on 2,500*l*, expended on the Torquay station, making a total net receipt of 383*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, March 5.—In the railway market business was very limited, and, in a few instances, a decline was established, particularly in North-Eastern and South-Eastern. Indian guaranteed showed no alteration of importance. Foreign shares were dull, especially Lombardo-Venetian and Great Luxembourg. Northern of France, on the other hand, improved. There was more animation in mines, and in several cases an improvement took place, the principal rise being in St John del Rey. American securities and joint stock banks closed about the same as on Saturday. In miscellaneous descriptions, Electric Telegraph stock was firmer. Ocean Marine Insurance shares left off 3½ to ⅝ pm.; Universal, ⅝ to ¾ pm.; London and Provincial, ¼ to ½ pm.; Canada loan scrip, 1¾ to 2 pm.; ditto bonds, 100⅜ to ⅝; Victoria debentures (new), 111¾ to 112¼.

TUESDAY, March 6.—The railway market continued dull, and in the absence of business rather flat. Of the more important British stocks, London and North-Western, Midland, Lancashire and Yorkshire, South-Western, Great-Western, South-Eastern, and Caledonian showed a decline of ¼ to ½ per cent. The tendency at the close was unfavourable. In the colonial and foreign markets the only material change was a reduction in Great Western of Canada shares to 12 to ¼. American securities have again been without alteration. Nova Scotia Government bonds were higher, and Victoria debentures (new) steady at 111¾ to 112¼. Mines were quiet, and occasionally heavy. In miscellaneous descriptions, Red Sea Telegraph were dull at ⅛ to ¼ pm. The Canadian loan left off 1⅝ to ¾ pm. scrip, and 100⅜ to ⅝ bonds.

WEDNESDAY, March 7.—The railway market was again very dull, and closed at a general decline. South-Eastern receded ⅝ per cent.; Great Western, Berwick, North British, Great Northern, and Caledonian, ¼; and other stocks, ⅛ to ⅜. The transactions of the day were unimportant. In colonial descriptions a fall took place in Grand Trunk and Great Western of Canada, the latter closing at 11¾ to ¾. Foreign shares were also flat, especially Brazilian; Pernambuco left off 1⅝ to 1½ dis.; Bahia, ⅝ to ¼ dis.; and San Paulo, ¼ to ½ dis. There was no change of importance in American securities. Mines were generally the same as yesterday, but in one or two cases a slight reduction was shown. Joint stock banks were quiet but steady; Ottoman left off 19 to ¼. In miscellaneous descriptions there was an advance in Electric Telegraph stock. Canada loan was last quoted 1⅞ to 2 pm. scrip, and 100½ to ¾ bonds; Ocean Marine Insurance, 3 pm.; Universal, ⅝ to ¾ pm.; London and Provincial, ¼ to ⅜ pm.; Bank of Turkey, 1⅜ to 1½ dis.; and Anglo-Luso Royal Mail, ⅜ to ½ pm.

THURSDAY, March 8.—The railway market showed further depression, and, notwithstanding a temporary rally, closed at a nearly general decline. In British stocks, Great Western was the heaviest, leaving off ¼ per cent. lower. Eastern Counties also receded ½, and most other descriptions ¼ to ⅜. Indian guaranteed railways continued steady and unaffected by the heaviness in the other markets, but Canadian were again weaker. Grand Trunk closed 33 to ½, and Great Western of Canada, 11⅝ to ¾. There was a general fall in foreign shares, Lombardo-Venetian presented the most marked decline. In American securities a reduction of 1 dol took place in Illinois Central shares. Mines were inactive, and in one or two cases lower. In joint stock banks, Australasia were flat; Ottoman were also dull at 19 to ½. In miscellaneous descriptions a rise occurred in Peninsular and Oriental Steam, and a decline in Berlin Waterworks and Madras Irrigation. Canada loan left off 1⅝ to ¾ prem. scrip, and 100⅜ to ⅝ bonds; Victoria debentures (new), 111½ to 112; Ocean Marine Insurance, 3¼ to ⅝ prem.; Universal, ⅝ to ¾ prem.

FRIDAY, March 9.—In the railway share market the dealings were limited, but prices slightly improved. London and Brighton, 110¾ 111¼. South-Western, 91¾ 91¼. North-Westerns, 97 to 97½. Midlands, 108⅜ 109½. Eastern Counties have declined to 54¾. The foreign and colonial lines were flat. Lombardo-Venetian were 11¼ 11⅜. Joint stock bank and miscellaneous shares remained at about former prices.

The Economist's Railway and Mining Share List.

THE HIGHEST PRICES OF THE DAY ARE GIVEN.

FLORAL HALL.—COVENT GARDEN.

In consequence of the immense number of applications to view the New Floral Hall, as fitted for the Royal Volunteer Ball, arrangements have been made to open the Hall for Exhibition for three evenings next week, viz.:—On Tuesday, March 13; Thursday, March 15; and Saturday, March 17. On these three occasions the whole of the Fittings, Decorations, and Illuminations of the Royal Volunteer Ball will be exhibited.

A Full Military Band will attend.

Admission, 2s 6d.

The Doors will be thrown open at 8, and close at 11.

THEATRE ROYAL, DRURY LANE.

Lessee, Mr E. T. Smith.

Great attraction.—First night of a new drama.—Grand Ballet Divertissement.—First night of a new farce.

Monday, and during the week, Her Majesty's servants will perform (first time) a new drama, in three acts, entitled CHRISTMAS EVE; or, The Duel in the Snow. Characters by Messrs Emery, C. Verner, R. Roxby; Mrs Dowton, Miss H. Howard, and Miss Page. To be followed by a grand BALLET DIVERTISSEMENT. By Madlle Morlacchi, Madlle Baliio, and the ladies of the Corps de Ballet. To conclude with an entire new farce, called THE RIGHT MAN IN THE RIGHT PLACE. Characters by Messrs Templeton, J. Saunders, Frank Hall (his first appearance), and Mrs Dowton.

Doors open at half-past six; commence at seven precisely.

Parties at a distance, by addressing Mr Nugent, box-office, with a post-office order, will meet with attention.

Stage Manager, Mr Robert Roxby.

NEW THEATRE ROYAL ADELPHI.

Sole Proprieter and Manager, Mr B. Webster.

Third week of a new and original comedy by Watts Phillips, entitled PAPER WINGS On Monday, and during the week, ICI ON PARLE FRANCAIS. Mr J. L. Toole, C. Selby, Billington; Mrs Chatterley, Mrs Billington, Miss Laidlew. After which, PAPER WINGS. Mr A. Wigan, J. L. Toole, David Fisher, Billington, Stuart, P. Bedford, Eburne, C. J. Smith, Powell, Romer, Howard; Mrs A. Wigan, Miss H. Simms, Mrs Chatterley, Miss K. Kelly. To conclude with DINORAH UNDER DIFFICULTIES. Messrs J. L. Toole, P. Bedford, C. J. Smith, Eborne; Miss K. Kelly.

Doors open at half-past six, commence at 7. Box-office open from 10 till 5. No fees for booking or to servants permitted. Acting Manager, Mr W. Smith.

ROYAL ST JAMES'S THEATRE,

King street, St James's.

Sole Lessee, Mr F. B. Chatterton.—Directress, Miss Wyndham.

On Monday and Tuesday, for the benefit of Mr Edward Chatterton. The Eminent Tragedian Mr Charles Dillon will appear. The performances to commence with the LADY OF LYONS. Claude Melnotte, Mr Charles Dillon; Pauline Deschappelles, Miss Katherine Hickson. To be followed by the successful burlesque of DIDO. Supported by Mesdames Wyndham, Clara St Casse, Eliza Arden, C. Rance, Murray, and Mr Charles Young. After which, on Monday, Mr and Mrs Howard Paul will give 2 characters from their entertainment. To conclude with, each evening, MAGIC TOYS. Miss Lydia Thompson, Miss Clara St Casse.

Pit 1s, Gallery 6d. Commence at Seven. Box-office open from 11 to 5 daily.

ADAMS'S TWENTY-FOURTH ANNUAL BALL, at WILLIS'S ROOMS, King street, St James's.—Mr T. ADAMS has the honour to announce to his numerous Patrons that his ANNUAL BALL will take place at the above Rooms on TUESDAY, March 13th, when his celebrated Band will be in attendance.—Gentlemen's tickets, 12s 6d; ladies ditto, 7s 6d (including refreshments). Tickets to be obtained of Mr Adams, 77 John street, Fitzroy square, and at the Rooms. M.C., Mr Frampton.

EAU-DE-VIE.—THIS PURE PALE BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

IMPORTANT STANDARD BOTANICAL WORK

WITH NATURE-PRINTED PLATES.

Complete, price 6l 6s, half-bound, in Imperial Folio, with 51 plates,

THE FERNS OF GREAT BRITAIN and IRELAND. Nature-Printed by HENRY BRADBURY. With full descriptions of the Species and Varieties, by THOMAS MOORE, F.L.S.; Edited by Dr LINDLEY.

"In the magnificent work written by Mr MOORE, edited by Dr LINDLEY, and illustrated by M. HENRY BRADBURY, we find the solution to the problem how to make Nature herself paint her own portraits with the most scrupulous fidelity.....We have here, on fifty-one large plates, pictures of all our British kinds of Ferns, with their principal variations of form presented to us with precisely the same appearance as would be exhibited if the living species were placed flat upon sheets of white paper. The mere tyro may identify in a few minutes any species by simply placing the living leaf side by side with its portrait, which reproduces it in the minutest detail and in its natural dimensions. In turning over the beautiful plates, it is hard to say which is most to be admired—the elegance and delicacy of the objects represented, the almost miraculous fidelity with which they have been produced, or the ingenuity and patience by which such results have been obtained. Not merely the forms, but the delicate veining of the foliage, and the fruit-heaps on the fertile leaves are brought clearly out; the veins, indeed, appear more distinctly than in the real objects, and in this respect are an assistance to the botanist in deciphering, as it were, the Fern itself.....Though the Volume on the British Ferns is what the French term an ouvrage de luxe, and, as such, deserves a place in the drawing-room wherever a love of Nature exists, it is not alone valuable for its pictorial merits. The text which accompanies the plates is written by one whose knowledge of the British Ferns is surpassed by none, and whose views on their classification are just and sensible."—QUARTERLY REVIEW.

"This magnificent folio is the first-fruits of the Nature-printing process in this country. Those who have made the study of Ferns the recreation of their leisure hours will be delighted with this volume, not only as representing their old favourites in a truly living form, but on account of the great attention given to the representation of varieties, and the appearance of the plants in every stage of their development. Nothing is more puzzling to the young botanist than the varieties of form which the same species of Fern assumes according to locality and other circumstances. These cannot be made evident by descriptions alone; and certainly in no instance has any author ever attempted to illustrate so large a number of varieties of Ferns as are found here. Of the way in which they are Nature-printed in this book, we can safely say they are better done than anything of the kind we have seen before. Such beautiful representations of natural objects deserved good illustrative letter-press, and in the services of Mr Moore and Dr Lindley, Mr Henry Bradbury has enjoyed the aids of competent science. The description of the species, the synonyms, and the general remarks, are more extended than in any work hitherto devoted to the British Ferns. —ATHENÆUM, April 27, 1857.

Bradbury and Evans, 11 Bouverie street.

AT HAMBLY HOUSE ACADEMY, Streatham Common, Surrey, Young Gentlemen are carefully Educated for the Public Schools, Military Colleges, Professions, or Commerce, by Mr R. S. TROUSDALE, L.C.P., aided by highly qualified assistant masters.

The domestic arrangements are on the most liberal scale; and the house is very delightfully situated. The terms for pupils under ten years of age, 30 guineas per annum; ten and under fourteen, 35 guineas per annum; fourteen, 40 guineas per annum. The above amount includes board and instruction in the Latin, Greek, French, and English Languages, Writing, Arithmetic Merchants' Accounts, History, Geography, the Use of the Globes, Astronomy, Geometry, Algebra, and the other branches of the Mathematics. A library is devoted to the instruction and amusement of the pupils during their leisure hours. Religious works are provided for Sunday perusal; and lectures on various popular subjects are occasionally delivered. German Drawing, Dancing, and Music, on the usual terms. Washing, half-a-guinea per quarter. Drilling during the summer months, at a trifling charge; and board during a vacation, four guineas. All accounts are expected to be settled quarterly. Excellent accommodation for foreigners or gentlemen of neglected education. A quarter's notice of removal is required.

SELF-CURE.—AMERICAN TREATMENT.

TO NERVOUS SUFFERERS.—GIVEN AWAY.

"THE GUIDE TO SELF-CURE."

By C. T. RAPKEY, Esq., Registered M.R.C.S., and Consulting Surgeon to the Metropolitan Medical Institute, &c.

"The first man of the day in these complaints."—MEDICAL REVIEW, July, 1856. "The true guide to those who desire a speedy and private cure."—UNIVERSITY MAGAZINE. "The 'NEW AMERICAN DISCOVERY' demonstrates the absurdity of the English Mode of treating such complaints, will prove a blessing to the afflicted, who may safely and easily regain pristine health by adopting the means presented."—EVENING SUN.

Sent free on receipt of four stamps (merely charged to defray postage, &c.) by Dr RAPKEY, No. 27 Alfred place, Bedford square, London, W.C.

COCOA.—TAYLOR BROTHERS' PATENT LENTILIZED COCOA is pronounced by Professor Letheby and Dr Hassall to be superior in nutritious element to all others. See their reports, printed on the labels of each canister. Sold by all grocers at 1s 6d per lb.

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.
79 St Paul's churchyard, London.

DINNEFORD'S
PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

DR KAHN WILL CONTINUE TO deliver his popular Lectures on the "Philosophy of Marriage," daily at 3 and 8, at his Museum, top of the Haymarket. Admission, One Shilling.
Dr Kahn's treatise on the above subject, sent post free for twelve stamps, direct from the author, 17 Harley street, Cavendish square.

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d
WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.
DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.
At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:
Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.
Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., 182 Piccadilly, London; Abbis, 60 Gracechurch street; and all grocers and chemists.

ON SPINAL AND OTHER DEFORMITIES.
PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.
AND
Just published, second edition, price 1s 6d,
CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.
"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.
"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.
"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.
"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.
London: John Churchill; and may be had of all booksellers.

DR ROBERT ROWE ON INDIGESTION.
This day is published, price 2s 6d, the fifteenth edition,
NERVOUS DISEASES, Liver and Stomach Complaints, Low Spirits, General Debility, and Diseases of Warm Climates; the Result of Thirty Years' Practice.
By G. ROBERT ROWE, M.D.
"Dr Rowe claims with justice a priority of authorship, while he yields to none in his treatment. The value of this work is enhanced by its practical nature."—LANCET.
"We have no hesitation in placing this work among the first ranks. We entertain a high opinion of its value."—MEDICAL TIMES.
"This is a clever and useful work; contains much that is worthy of attention, and should be read by all martyrs to indigestion and other ills."—TIMES.
Also, by the same Author, 2nd edition, price 4s 6d, On some of the Important Diseases of Females and Children.
London: J. Churchill, and to be had of all booksellers.

HOLLOWAY'S PILLS.—Winter Ailments.—There are diseases peculiar to each season; but winter usually much increases the sick list. Influenza, Diptheria, Rheumatism, and many chest complaints frequently prevail at this time, and purifying the blood is the most certain and rational antidote to all of them. This can be accomplished most readily and effectually by a course of Holloway's estimable Pills, which act by directly expelling all impurities, and healthily stimulating every organ. They wonderfully assist digestion, promote wholesome activity in kidneys, liver, and lungs; and strengthen the nerves. These Pills may be taken with safety and benefit by all invalids, whatever be the malady or its duration.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies PATENTED INCORRODIBLE TEETH, without extracting Teeth or stumps, on his never-failing and painless principle of SELF-ADHESION, rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his OSTEOPLASTIC Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

Post free for Two Stamps.
EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evenieg.

A Boon to Nervous Sufferers.
GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c, which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq, 8 Burton crescent, Tavistock square, London, W.C.

THE HUMAN HAIR
Just published, price 1d, the 76th edition of
GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included
Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

Certain Means of Self-Cure Gratis.
THE NEW FRENCH REMEDY as prepared by the ECOLE PHARMACIEN, PARIS, has been used by the most eminent of the Medical Faculty on the Continent for several years, with great success, and has been found a certain remedy for effectually restoring the Nervous and Debilitated to a state of vigorous Health and Manhood, when the Nervous System has been weakened by the Errors of Youth, or from any other cause. All Impediments to Marriage are speedily removed by this wonderful discovery. Full particulars forwarded gratuitously to any address, with every instruction for SELF-CURE, on receipt of a stamped directed envelope, by MONS. DUVAL, Patent Medicine Agent, Birmingham.

Just published, in 1 vol. 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,
VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.
By A PHYSICIAN, &c., &c.
(Registered under the New Medical Act).
Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.
CONTENTS.
INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.
Consultations from 10 till 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

PEMARTIN'S CELEBRATED SHERRIES.

RAIL PAID TO ANY STATION IN ENGLAND.

THOMAS NUNN AND SONS,

WINE, SPIRIT, AND LIQUEUR MERCHANTS,

(ESTABLISHED 1811),

21 LAMB'S CONDUIT STREET, FOUNDLING HOSPITAL, W.C.,

Respectfully call the attention of the public to the SHERRIES of the above eminent shipper: they are extremely soft and nutty, and so perfectly mellow and free from heat or the slightest approach to acidity, as to render them alike favourites both with the connoisseur and the invalid.

ALLSOPP'S PALE OR BITTER

ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

LONDON.....	At 61 King William street, City.
LIVERPOOL	At Cook street.
MANCHESTER.....	At Ducie place.
DUDLEY.....	At Burnt Tree.
EDINBURGH	At Union street lane.
GLASGOW	At 115 St Vincent street.
DUBLIN	At 1 Crampton quay.
CORK	At 25 Cook street.
BIRMINGHAM	At Temple street.
WOLVERHAMPTON	At Exchange street.
WORCESTER	At the Cross
SOUTH WALES	At 18 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

TRADE B/D MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—

The LANCET states, "This is superior to anything of the kind known."—It is respectfully announced that to any application by letter, Brown and Polson forward the address (for any village or town in the Three Kingdoms) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as Brown and Polson's," if the name, address, and designation are kindly communicated, such confidence will be greatly appreciated.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, and 23 Ironmonger lane, London.

OVERLAND ROUTE.—

COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Reunion, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

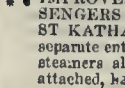
NOTICE.—The Steamers for Halifax and Boston are intended to call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH

AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and Her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—

*ARABIA, for NEW YORK direct, Saturday, March 17.

*Taking Passengers and Goods for Nassau and Havana, to be transferred at New York on board R. M. S. S. Karnak.



NIAGARA, for BOSTON, Saturday, March 24.

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s: Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.

—The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

GENERAL FURNISHING IRONMONGERY CATALOGUE may be had gratis, and free by post. It contains upwards of 400 Illustrations of his illimited stock of Electro and Sheffield Plate, Nickel Silver, and Britannia Metal Goods, Dish Covers, and Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gasoliers, Tea Urns and Kettles, Tea Trays, Clocks, Table Cutlery, Baths and Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Furniture, &c., with List of Prices, and Plans of the Sixteen large Show-rooms, at 39 Oxford street, W.; 1, 1A, 2, and 3 Newman street; and 4, 5 and 6 Perry's place, London.—Established 1820.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock or the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

A TOILETTE REQUISITE FOR THE SPRING.

—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street north, Strand, W.C.

THE GREAT EXHIBITION OF 1851

—Council Medal, Exposition Universelle, 1855—Grande Medaille d'Honneur.—Gallery of Bronzes d'Art.—F. BARBEDIENNE and CO., of Paris, respectfully inform the British public, that a complete COLLECTION of their MATHEMATICAL REDUCTIONS (by the process of M. Collas) from the CHEF d'ŒUVRES of ANTIQUE and MODERN STATUARY in the Galleries of of the Louvre, Florence, and Rome, Museum of Naples, and British Museum, may be seen at Messrs JACKSON and GRAHAM'S, 35, 37, and 38 Oxford street. The Prices the same as in Paris, with the charges of importation only added. Catalogues, with marginal illustrations, may be had free on application. N.B. A large and splended collection of Ornamental Clocks, Vases, Candelabra, and other objects of taste.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DREADFUL ACCIDENTS FROM FIRE.

—The numerous painful deaths that have occurred during the present season from ladies' dresses taking fire, would have been prevented by the use of the Panklibanon Registered Safety Fire Guard, price from 10s each. They are nearly invisible, do not obstruct the heat, and require no fixing. No fire-place should be without one of these life-preservers. The public are invited to view them at the Panklibanon General Furnishing Ironmongery and Electro Silver Plate Warehouse, 56 and 58 Baker street. Illustrated books sent free.

N.B.—Colza Oil, of the finest quality, 4s per gallon.

LILLE COLZA OIL

for MODERATOR LAMPS, 4s and 4s 6d per Gallon. It being essential in order to obtain brilliancy of light to have Oil that is perfectly bright and pure,—most especial care is taken by

WHITMORE and CRADDOCK

in selecting only from the finest parcels imported into this country, and they guarantee its delivery in precisely he same fine condition as when drawn from the tanks at Lille. Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND ELECTRO-SILVER PLATE

always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III, c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,

MAPPIN BROTHERS,

Queen's Cutlery Works, Sheffield; and 67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuinness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted. Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NON CAN POSSIBLY BE GENUINE, by respectable chemists.

Lisbon, 4 P. Rua Boa Vista.

This Company, formed for the purpose of establishing a line of steam service between England, Portugal, and the Brazils, and completing the essential link of communication between Milford Haven, the seaport of the Great Western and South Wales Railways, and Santos, Bahia, and Pernambuco, the seaports of the three important railways of the Brazils, has been incorporated by a Royal Charter from His Majesty the King of Portugal.

The commercial transactions between Great Britain, Portugal, and the Brazilian empire are of immense and increasing importance, as is shown by the annual trade returns. From 1850 to 1857, our exports of British manufactured goods to the Brazils increased from £2,544,837 to £5,447,566; and the passenger traffic between Portugal and that empire, which is already very great, is constantly and largely increasing, and will be very much further developed by the railways now in course of construction.

The Brazilian ports send coffee, dyewoods, drugs, diamonds, silver, and other valuable products to this country every year; while we import 60,000,000 lbs of coffee annually, two-thirds of which may be furnished by the Brazils, in exchange for British manufactures. These facts alone will give some idea of the present and prospective commerce between the three countries, and of the necessity of the connecting link furnished by this Company for the regular, rapid, and frequent transit of goods and passengers.

In sanctioning the formation and assuming the official position of Protector of the Company, His Majesty the King of Portugal fully recognises the importance of the extensive and increasing trade that exists upon the line the Directors have adopted. His Royal Highness the Duke of Oporto, His Majesty's brother, by accepting the President's chair, also gave expression to his opinion as to the importance of the undertaking.

The statutes under which the Company has been incorporated give its vessels special advantages over those of other nations, and the Directors are assured that their ships sailing under the Portuguese flag will be able to command a very large share of the passenger traffic existing between Great Britain, Portugal, and the Brazils.

The Directors have entered into a contract with the Portuguese Government for a subsidy for the carriage of their mails to the Brazils, by which a payment is secured to the Company equal to about £15,000 per annum of our money. A contract has also been entered into with Her Majesty's Postmaster-General, on highly favourable terms, for the conveyance of the British mails from this country to Portugal and the Brazils, and a subsidy will also be received from the Brazilian Government for the conveyance of their mails, equal to about £15,000 a year. In addition to these contracts already concluded the Company have negotiations in progress which the Directors confidently anticipate will terminate satisfactorily, and in that case the Company will be in receipt of a gross sum of £85,000 a year for postal service.

The line was opened on the 3rd of October last.

The following is an extract from the report of the Directors of the South Wales Railway to their shareholders on the 20th of February, 1860:—

The arrangements for through booking with the Anglo-Luso-Brazilian Royal Mail Steam Navigation Company, which were adverted to at the last half-yearly meeting, have been brought into operation. One of the ships of the Company arrives at and departs from Milford Haven in each month.

The traffic in connection with them has already become of material importance to this Company, and from information which the Directors have received they believe that the undertaking itself bids fair to be a profitable one to its promoters, and of permanent advantage to the South Wales Railway.

Applications for shares to be addressed to the Directors of the Company, 40 Cannon street, London, E.C.; or to the Brokers of the Company, Messrs De Zoete and Edwards, 17 Throgmorton street, London; or Messrs Knight and Coleman, 1 Royal Exchange buildings, London. Each application for shares must be accompanied by a payment, at the rate of £1 per share on the number of shares applied for. If the application be not acceded to, the deposit will be returned in full.

Prospectuses may be had at the offices of the Company, and from the Brokers and Agents.

THE FOLKESTONE WEST CLIFF HOTEL COMPANY (Limited).

Registered pursuant to the Joint Stock Companies Acts, 1856-7, by which the liability of shareholders is strictly limited to their subscriptions.

Capital, £60,000, in 60,000 shares of £1 each. Deposit, 10s per share on application, and 10s on allotment.

DIRECTORS.
J. Challice, Esq., M.D., Chairman of the London Bridge Hotel Company, Southwark, Chairman.
Benjamin J. Armstrong, Esq., Deputy-Lieutenant for Middlesex, Elmfield Lodge, Southall.

ARCHITECT AND SURVEYOR.
Joseph Messenger, Esq., Spring gardens, and Folkestone.

MANAGER OF THE HOTEL—Mr G. Giovanolni.
SECRETARY—R. T. Alison, Esq.
OFFICES—20 Walbrook, City.

This Company is formed for the purpose of purchasing and enlarging the premises well known as the WEST CLIFF HOTEL, FOLKESTONE, and advantageous arrangements have been made with the Proprietor, who has agreed to sell to the Company the whole of this property by Mr Woodthorpe's valuation, and to take a large portion of the purchase money in paid-up shares. Possession of the property will be given to the Company on Lady-day, when completion of the purchase will be effected.

A novel system for the security of shareholders is proposed to be carried out by the Directors of this Company, and it is intended to receive shares at their par value as cash payments from Shareholders who may at any time visit this Hotel. This arrangement being purely of a Tontine character, presents a pleasing method to any shareholder for realising the value of his investment, whilst at the same time the interests of the remaining proprietors are greatly enhanced by every share thus cancelled.

The Directors propose to enter into arrangements with the London Bridge Railway Terminus Hotel Company, with the view of establishing a system "en-correspondence" between the two Companies, which will result in great advantages to the shareholders of both Companies.

Applications for shares, not later than the 20th inst., to be addressed to the Secretary, 20 Walbrook, or to the Brokers of the Company, 28 Threadneedle street, where detailed prospectuses can also be obtained. A deposit of 10s on each share applied for must be previously paid to the Bankers of the Company; and in the event of no allotment being made, the deposit money will be returned.

INDIA OFFICE, February 29, 1860.

THE SECRETARY OF STATE for India in Council hereby gives notice, that he has received from Bengal the undermentioned Schedules:—

A. Schedule of all Administrations whereof the final balances have been paid to the parties entitled to receive, specifying the amount of such balances, and the persons to whom paid, during the six months ending on 30th June, 1859.

B. Schedule of all Sums of Money, Bonds, and other Securities received by the Administrator-General on Account of Current and Unadjusted Estates, not being Hindoo or Mahomedan, remaining under his charge, together with the payments made thereout and the balance in hand.

C. Schedule of all Sums of Money, Bonds, and other Securities received by the Administrator-General on account of Adjusted Estates, not being Hindoo or Mahomedan, remaining under his charge, together with the payments made thereout and the balances in hand.

D. Schedule of all Sums of Money, Bonds, and other Securities received by the Administrator-General on account of Hindoo and Mahomedan Estates remaining under his charge, together with the payments made thereout and balances in hand.

E. Schedule of Balances in the hands of the Administrator-General, set apart to meet the admitted claims of creditors against the estates therein mentioned.

F. Schedule of Unclaimed Balances of Estates under Rs 500 deposited with the Sub-Treasurer, Fort William, under the Financial Secretary's letter of the 8th Oct., 1852, interest being allowed thereon by Government.

And that the said Schedules are open to the inspection of the public at the department of the Agent to the Administrator-General in this Office.

CONTRACT FOR NECESSARIES and BARRACK STORES for the ROYAL MARINES.
Department of the Comptroller for Victualling and Transport Services,
Somerset place, 29th February, 1860.

The Commissioners for executing the Office of Lord High Admiral of the United Kingdom of Great Britain and Ireland do hereby give Notice, that on Thursday, the 15th of March next, at Half-past One o'clock, they will be ready to treat with such persons as may be willing to Contract for supplying and delivering into Her Majesty's Victualling Stores at Deptford, for 12 months certain, and afterwards until the expiration of 3 months' warning, the undermentioned ARTICLES for the use of the Royal Marines, viz.:—Necessaries—Hand Towels and Linen Bags; Barrack Stores—Hand Scrubbing Brushes.

Patterns of the articles may be seen at the Royal Marine office, New street, Spring gardens, between the hours of 1 and 4 o'clock.

No tender will be received unless made on the printed form provided for the purpose, and which may be obtained on application at the said office.

Particular attention is called to the recent modifications of the conditions of the contracts, which may be seen at the said office.

No tender will be received after half-past one o'clock on the day of treaty; and it will not be required that the party tendering, or an agent on his behalf, should attend at the office on the day of contract, as the result of the offer received from each person will be communicated to him and his proposed sureties in writing.

Every tender must be addressed to the Secretary of the Admiralty, and bear in the left-hand corner the words "Tender for Necessaries and Barrack Stocks," and must also be delivered at Somerset House.

London: E. T. Whitfield, 178 Strand.

A New and Final Edition of
THE PENNY CYCLOPÆDIA, with a NEW SUPPLEMENTARY VOLUME, illustrated by more than SIX THOUSAND ORIGINAL ENGRAVINGS. Thirty Volumes bound in Seventeen. Price FIVE GUINEAS.
The CYCLOPÆDIA and the ORIGINAL SUPPLEMENT being out of print, the Proprietors have printed a limited edition from the stereotype plates of the Twenty-nine Volumes. The paper and print are, for the first time, of uniform excellence. The second Supplement is entirely new, and embraces every addition to the sum of human knowledge during the last twelve years. The sum of £40,000 has been expended on authorship and engravings alone.
James Sangster and Co., 36 Paternoster row, London, E. C.
A few odd volumes to perfect old sets.

THE BANKERS' MAGAZINE AND COMMERCIAL DIGEST for March, contains—Original Articles on the Advance in the Rate of Discount; Banking Organisation in Turkey; The Progress of the Discount Companies; The Bank of England Directors and the Discount Brokers; Full Reports of Joint Stock Bank and other Bank Meetings; Correspondence on Points of Practice; Monetary Review for the Month; List of Failures, &c.
London: Groombridge and Sons, 5 Paternoster row and all booksellers.

Just published, Second Edition, with Illustrative Map, price One Shilling,
AMERICAN SECURITIES.—PRACTICAL HINTS on the TESTS of STABILITY and PROFIT, for the Guidance and Warning of British Investors.
By "AN ANGLO-AMERICAN."
Owing to the rapid sale of this Pamphlet, a Second Edition, revised, and enlarged, has been published, with an Illustrative Map, showing the principal Railways in operation in the Eastern and Western States. In this Edition, the Author will endeavour to answer every objection raised by the Editor of the TIMES' City article, and by other public writers, in commenting on the First Edition; and, it being to the advantage of the people of both countries to uphold the character of really sound and profitable enterprises, the Author's views will be addressed not only to the British public, but to those whose successful administration of money, advanced in England for Public Works in America, deserves honourable mention. Besides 28,000 miles already in operation, 16,000 miles of new Railway, involving an estimated expenditure of 80 millions sterling, are either under construction or projected. This circumstance enforces the importance of British capitalists looking carefully to the existence of reliable guarantees for safety and profit.

NOTICES OF THE LONDON PRESS.
(From THE TIMES' City Article.)
"A well-written pamphlet just issued on 'American Securities,' by an 'Anglo-American.'.....Undoubtedly the conditions he names ought to insure the prosperous results which seem so plain to him. Intending shareholders cannot do better than attend to his advice on these points; but they must also satisfy themselves upon another, without which, although it has escaped him, everything else is as nothing.....Add the certainty of honest management, and of a faithful regard to the interests of foreign partners to the requisites cited in the present pamphlet, and you will indubitably have a key to an income which will enable you ever after to despise Consols.....Meanwhile, every one will admit with him, that America should be the most secure and advantageous field for the employment of British capital."
(From THE MORNING CHRONICLE City Article.)
"A very important and well-timed pamphlet..... The circumstance that will give great weight to the writer's sensible and practical remarks, is the total absence of any thing like a recommendation of any particular kind of American security. The remarks are general, and the reader is left to form his own judgment. We must extract the following rules for the guidance of investors. They are so good that they may be studied with advantage by all classes who have money to invest, and to whom a large and secure return is an object. The author asserts that in any case, where the following features are found in combination, it may be affirmed that all the elements of immediate success exist in the highest degree, and that the position of shareholders is perfectly safe and certain:—1. The possession of a landed estate of extensive area and productive quality. 2. The existence upon such land of abundant mineral resources and abundant forest growth. 3. The line and its contiguous landed estate, being so situated as not to absorb, in cost of conveyance, too large a proportion of the prices obtainable at market for the various commodities forwarded. In all new American enterprises the author insists that the British element in the directorial department is essential where British capitalists are invited to lend their support. Altogether, this is one of the fairest little works that have yet appeared on this subject."
(From THE MORNING POST City Article.)
"A valuable pamphlet."
(From THE MORNING HERALD.)
"May be perused with advantage."

The Political Economist.

THE REFORM BILL AND MR HARE'S PROPOSED CLAUSE.

It is a fact worthy of note, that the democratic party cordially reject, and take every opportunity of disowning the true representative principle in its application to the Reform movement. That principle we take to be, that the representation of any constituency is improved by any measures which tend to secure to the various political convictions prevalent within it a more adequate expression in the House of Commons,—to the convictions most universal or most prevalent in that constituency, the *most* full and unanimous representation through its members,—to less universally held convictions, a less weighty and adequate representation, less in proportion to the less hold they have on the minds of the electors. This, we say, is the true and obvious principle of all representation as such. If a constituency contain two powerful parties, of which one is rather, and only rather, more powerful than the other, is it a truer *representation* of that constituency that three members should be returned all belonging to the more powerful party, and none of them speaking or professing to speak the convictions of the less powerful,—or that two members should be returned by the more powerful and one by the less powerful party? In other words, is a truer *likeness* of the constituency obtained by suppressing altogether all hint of the political features which an influential minority introduces,—or by giving them a real but less marked representation than those of the prevailing party? The Democrats have never hesitated to oppose and even to inveigh in the harshest manner against the latter reform. They have always maintained, and still maintain, that the House of Commons ought not to represent the constituencies as faithfully as possible,—but only the numerically largest party in each constituency as faithfully as possible,—and that every trace of parties which chance to be outnumbered should be blotted out from the Legislature altogether: and this, too, notwithstanding the fact that the convictions thus blotted out are likely to be those to which the educated attach more, and the uneducated less, importance.

The root of this violent democratic aversion to any representation of convictions not held by the absolute majority of the constituency, is an unexpressed but largely prevalent belief that all important political questions, legislative or otherwise, ought to be decided, not in the House of Commons, but on the hustings,—not by the members of a deliberative assembly, but by the direct *fiat* of the electors themselves. In other words, the notion is extending more and more widely that the House of Commons ought to be,—not, as far as may be, a reduced model of the political tendencies of England,—but a mere executive committee, nominated by the people to carry out resolutions on which the legitimate decision is given at the hustings.

There are, then, two strongly contrasted views:—the one, that the House of Commons ought to include, as far as possible, spokesmen of the various weighty political tendencies which divide the community at large, even though many of these tendencies, weighty and influential as they are, are in a perpetual minority in the constituencies, reckoning by mere numbers;—the other, that the House of Commons ought to include only the nominees of predominant tendencies,—and that the struggle for predominance ought to begin and terminate in the popular elections. People will be apt to adopt one or other of these views in proportion as they are satisfied, or not satisfied, with the kind of ventilation or discussion which political principles and measures get in a contested election. If they think that such discussion is really adequate and ought to be final, they will not regret the complete exclusion of the relatively weaker parties (however strong absolutely) from the House of Legislature. They will assume that their arguments, having been heard and set aside by the vote of the multitude, do not need to be heard again in the House of Commons. For ourselves, we must avow our deep conviction that it is completely contrary to the spirit of the constitution to assume that the great battle of principles ought to be finally settled by the constituencies rather than by the House of Commons. The very object of the great variety in the qualification of voters, and in the character and magnitude of constituencies chosen, was to ensure a really diversified character in the representative assembly. And now that the tendency of reform legislation is to treat all these varieties as *anomalies*, and to assimilate as much as possible all the elements in the various constituencies,—we hold it to be of the first importance to rectify the injustice that will otherwise result, by careful provision so far as may be possible, for the representation of those political convictions which are held by the most influential, but not by the most numerous elements in the political community.

Mr Hare,—whose work on the representative system drew about a year ago the respectful attention of all thoughtful men,—has recently advocated in the columns of the *Times** an addition to the new Reform Bill which we have more than once supported in these columns. This is a clause to the effect that, however many members any constituency may return, no vote for more than one candidate shall be received from any elector in the same constituency. The only valid objection to such a clause would be with respect to those constituencies in which two members are returned. There it would be said the effect of such a clause would be not merely to represent the convictions of the party second in numerical strength, but to give them *equal*

* See a letter in the TIMES of Thursday, March 15.

power and prominence with that of the party first in numerical strength. And the objection is certainly good so far as it goes, which is not far. For if it be, as it might be thought, unjust in theory to deprive the predominant party of the fair advantages of a majority in such constituencies,—yet we must remember that in constituencies having only one member, the predominant party would have *more* than the fair advantage of a majority; and that, in constituencies having three members, also it would generally have more than the fair advantage of a majority,—as it would often be able to return two out of three members, though having a majority not nearly so great as two to one. Thus the theoretically unfair equality of power as between the majority and minority in such constituencies as returned only two members, would be compensated by a theoretically unfair advantage given to the predominant party in all constituencies returning only one member, and in most constituencies returning three members.

We have argued the point on the supposition that the House of Commons ought strictly to *represent* the state of parties in the country. This we believe to be the true theory of its *representative* and deliberative character. But we ought never to forget that it has another character quite as important as its representative and deliberative character, —its *governing* character. It is not merely a focus of the political tendencies of the country,—its vote is the final authority when once the deliberative part of its duties is performed. And in this character it is obvious that not merely should the political tendencies of the country be represented in proportion to their relative strength, but also in some proportion to their relative *weight*, intellectual and moral. For this purpose, it is still more important that mere numbers should not have the power of swamping the representation of less numerous but more intelligent and thoughtful classes; and for this purpose, therefore, it is more than ever important that Mr Hare's suggestion, or some suggestion equivalent to it, should be adopted.

There is a lassitude among thoughtful men on this subject which we cannot too much deplore. Democracy is treated as a sort of inevitable fate,—and no effort is made to strengthen the hands of those who, like Mr J. S. Mill and Mr Hare, have pointed out, amid universal approbation and yet universal despondency and helpless languor, the true nature of the remedy. We do not know of any clause which would improve this somewhat soulless Reform Bill so much, as the simple addition to it of a provision limiting each elector in every constituency to a single vote. Let this be courageously proposed by independent members, and we cannot help thinking that there are many men of the highest influence to whom it would be most heartily welcome.

THE MORAL EFFECT IN FRANCE OF THE TREATY WITH ENGLAND.

The Commercial Treaty which has been concluded between France and England is one which must not be estimated exclusively by its *present* commercial effects. We all know and feel that these are but a small portion of the benefits we expect from it. We know that a heavy protective duty will still place our manufactured goods under a great disadvantage in France as compared with the corresponding articles of French manufacture; we know that the articles we receive from France are principally, if not wholly, articles of miscellaneous luxury, which we are very glad to have and to enjoy, but which are, nevertheless, not of the first importance to us. We all hope that the *moral effect* of this Treaty will be greater than its present mercantile effect. We have, therefore, endeavoured to ascertain what the moral effect is likely to be.

We hope, we need not doubt that, ultimately, the favourable hopes commonly entertained as to the results of the Treaty with France will be verified by experience. We hope that it will prepare the mind of Frenchmen for free trade —that it will show the French that it is really beneficial— that it is not, as they now too often imagine, a *cheat* of England. We hope that, in the course of years, this Treaty may prove to be to France precisely what Mr Huskisson's first tentative steps towards free trade were in this country; we hope it may be the commencement of a consistent policy of which the final consequence will be commercial freedom. We hope, also, that trade will produce its usual effects— that in proportion as France becomes more and more a commercial nation, she will become less and less a military nation—that hereafter she may be less inclined to that ambiguous and unquiet policy which now menaces the peace of Europe.

But though we think it is not too sanguine to hope for these ultimate results from the recent Treaty, we must not disguise from ourselves that its immediate results on French public opinion have not been equally beneficial,—have in some respects been the reverse of beneficial.

The "French mind" may for immediate political purposes be divided into two sections:—1st, the masses,—the ordinary, half-taught, industrial classes, which, for the most part, support the Emperor; and, 2ndly, the intellectual, literary, cultivated minority, who are fixedly opposed to him. We do not mean that there are no intermediate classes, or that an accurate analysis of French political society would detect no other elements. But for most practical purposes, and for our present purpose, the division which we have indicated is one to which we should be most careful to attend. It unfortunately happens that the Treaty which has been made with England,—*made as it has been made*,—is not at all popular with either of these classes. The substance of the Treaty offends one set of persons,—the manner of its conclusion the other.

The common mass of Frenchmen who maintain and support the present Government are almost to a man opposed to free trade; and it is not wonderful that it should be so. Free trade is very rarely a popular doctrine anywhere; it requires a great deal of careful consideration and matured economical experience to have a faith in it. In all the early states of industrial progress the popular sympathies are opposed to it. In all but very cultivated countries it is the *producer* who regulates the course of public opinion as to the article he produces. He is all day long occupied with it; he is believed to understand it; if he does not understand it, no one else does. He speaks with the authority of personal experience as to the course of his trade; he has the statistics and the details of it ready to his hand. In consequence he has an indefinite influence on the minds of those to whom he speaks; and the producer is everywhere and always *inclined* to oppose free trade. We have seen in the recent debates on cork and silk, and, indeed, in almost every other free-trade debate from the time of Mr Huskisson until now, how those even who admit the general doctrine strive to except from its application their own article. There is always a modifying circumstance to which they would direct our attention; and from this we can judge what would be their feeling in a country where the doctrine of free trade was unpopular, and where only a few speculative persons believe in its truth. In all countries the producing classes have advocated a protection to themselves as long as it was useful to them to do so. And there is little chance, except in cultivated countries, of opposing them. Free trade is intended to benefit "the "consumer," but he can hardly be got to attend to the matter, to be convinced that he is benefited. A small cheapening of price is a heavy burden on the producer, and he is eager to oppose, for he bears the whole of it; it seems very little to each individual consumer, for the aggregate benefit has to be indefinitely divided among a large number of persons. The general community in almost all countries care little for commercial freedom, and the producing classes are opposed to it. In France it is so. The general doctrine is, that free trade is all very well for England, which has "ships, colonies, and commerce," but that it will not suit less advanced countries. The lowest classes think its provisions just the half-cunning trick which suits "*la perfide* "*Albion*;" and they are proud of themselves for detecting it. Accordingly, every step in the direction of free trade in France is offensive to the feelings of the mass of the community; it is opposed to what they think their national interest, and it is allowing themselves to be "tricked by "England."

This great mass of prejudice, any measure which advanced a step in the direction of free trade would have inevitably to confront in France; it would be idle to complain of it in reference to the recent Treaty, for it is only what may be

expected by every one who has any acquaintance with French habits of thought. But the peculiarity which is to be regretted at the present moment is, that while the uninstructed are, as we should expect, opposed to us, the educated minority are not on our side. The Liberal party object to the *mode* in which the Treaty has been made, as warmly, or even more warmly, than the Imperialist party object to the substance of it.

The objection of the Liberal party in brief is this. They allege that England, though a free country, and the representative in Europe of all liberal ideas, has combined with the French Emperor, who is a despot, to force on France a particular commercial system, whether France wishes it or not. They say:—'Practically, our constitution gives scarcely any 'power of opposing resistance to the Emperor: there is almost 'only one case in which we can hope to oppose him, and that 'single case is when he opposes the industrial classes, who in 'general cling to him. If the Legislative Body had been 'allowed a voice in these measures, they would never even 'have been proposed: the sentiment of the nation is too decided. 'But England, by acquiescing in the Emperor's proposal to 'make a commercial treaty to which the consent of his Legisla-'ture is not necessary, has enabled him to lay upon us the *one* 'burden, which of himself he was not able to lay upon us.'

Thoroughly to appreciate the meaning of this language we must remember who it is that use it, and how they are situated. Until the present *régime*,—and especially under the Orleanist monarchy,—the intellectual minority in France governed France. How peculiar a minority they were,—how much their character, their opinions, their minds were opposed to those of Frenchmen in general, was not known until the establishment and the continuance of the present Government made it evident to all Europe. While the literary and Parliamentary *élite* of the country governed it, no one knew how few they were, and how weak was the attachment to the system which they administered. But the fact remains, that for many years they *did* govern France. Now they govern it no longer. Such men as M. Guizot have to give place to such men as M. Walewski. It is impossible that they should not be impatient at such a change, and irritated at such a yoke. They regard any close fellowship with the present Government as a kind of voluntary defilement; they can make no allowance for foreign necessities, or for the legitimate duties of foreign statesmen. Their single question is, 'Did you help the 'Emperor? Aye or no?'

Such being the feelings of the cultivated opposition in France, we can evidently on this occasion expect no aid from them, or at any rate from most of them. We *have* helped the Emperor to make this Treaty; we *have* enabled him to act without the consent of his Legislature; we have connected ourselves with the Emperor closely enough, and we must bear the penalty. We must submit in some degree to be the enemies of his enemies. As we have obtained the advantage of his goodwill, we must expect to incur the disadvantage. We lose the support of the cultivated intellect of France when it is most required—just when it is wanted to enlighten the obstinate dulness of the illiterate majority.

The effect of this position of affairs is evidently unfavourable to this country. We are more dependent than we were on the personal feelings of the Emperor. If he wishes to make war with us, neither of the great parties which divide France are for the present so amicably disposed to us as they were We do not say that either is actively hostile; but both have, we think, a jealous and a dissatisfied feeling.

We by no means say that we ought on this ground to have refused to consent to the Treaty with France. We think it was worth while to brave these immediate consequences for the sake of the ultimate benefits which we hope to obtain. But we certainly think that a distinct view of the legitimate wishes of the Liberal party would have made our Ministers refrain from a portion of the language which they *at first* used when this Treaty was spoken of. More than one Cabinet Minister has alleged as an excuse for the conclusion of a treaty, that it was needful to choose that mode because the 'constitutional forms' of France threw an obstruction in the way of every other. And this is exactly what the French Liberals complain of. They say that the greatest Constitutional Government in the world has gone out of its way to impair the efficiency of the feeblest constitutional restraints which exist anywhere in the world. And they certainly can quote words even of Lord Palmerston to justify what they say.

We the more regret the language of our Government because their conduct seems to us liable to no objection. The existing French Government offered to make a treaty which we thought advantageous to us. We assented. We had no occasion to inquire what might be the particular motive of the French Emperor for selecting that particular mode of commencing a tariff reform; it was a reform that we rejoiced at, and we aided him. Diplomacy would become impossible if each nation were responsible or bound to inquire into the domestic reasons that actuated the Government with whom they were negotiating. In this case, we have made a good treaty with a foreign monarch, but it was a serious error even to hint that we changed our tariff by compact, and not otherwise, in order to enable him to act as a simple despot, without consulting his vestige of a Legislature.

We trust that the unpleasant feeling which has thus been caused will pass away, and we do not doubt that it will. Still we must bear in mind that the immediate results of our Treaty have been different from what we expect that the final results will be. We hope that, ultimately, what we have done will cement our amity with France; for the moment, however, we have somewhat irritated the two great sections of the French people.

THE CONVERTIBILITY OF THE INDIAN CURRENCY.

It is now generally, though not universally, agreed that, in conformity with the recommendation of Mr Wilson, the paper currency which is to be issued in India should be a Government currency both in reality and name. We showed a short time since that on every account it was most advisable that this course should be adopted. Indeed, the question of establishing such a body as the Bank of England in India is not a practical question. The Bank of England, as regulated by Sir R. Peel's Act, is one of the most peculiar, insular, and national, of English institutions. It can only be explained to a foreigner by a historical narration of past circumstances. The proposal to imitate in an Oriental country such an institution would be both mischievous and ridiculous. It would be sure to fail, because the materials for creating a Bank of England do not exist in India; and while it was being attempted it would be injurious, as the natives of India would not feel that the Government were responsible for the paper currency—and the Government is the one body in which they have confidence.

The first point, therefore, as to an Indian paper currency, may be considered to be settled or nearly so. It is to be a Government currency. We have next to discuss what arrangements are to be taken for securing its convertibility. We need not waste the time of our readers in proving that such a note circulation ought to be convertible at the option of the holder. No one with whom it is necessary or worth while to argue proposes for India an inconvertible currency; and the attention of practical men of business is confined to the mode of securing the convertibility of the new note in the easiest, cheapest, and most effectual manner.

The proposal which has been made at Calcutta is that a certain proportion, say one-third of the notes issued, should be represented by bullion in the coffers of the Government—so that for every 3,000,000*l* issued, 1,000,000*l* of bullion should be kept as a reserve. Of course it may be necessary to proceed tentatively. The natives of India may not at first feel so much confidence as we hope in the paper of the Government, and until we know what their feeling is, it may be prudent to keep more bullion than the proposed rule of proportion would render necessary. But it may be assumed that, ultimately, such a proportion as one-third will be found adequate to satisfy the mind of the native population, to secure the credit of the Government against any sudden demand, and to give that confidence to the general community which is necessary and desirable. If it does not, the project of a paper circulation in India will be a failure.

A theoretical objection, however, has been raised to this plan, which has been suggested by the controversies on the operation of Sir R. Peel's Act in England. It has been said that, in strict theory, the constitution of the Issue Depart-

ment in India should resemble that of the Issue Department of the Bank of England. In the latter, as our readers are aware, a certain fixed amount (14,000,000*l*) is represented by securities, and the issues above that amount exactly correspond with the amounts of bullion that are from time to time held. Thus at the present moment there are about 14,000,000*l* also of coin and bullion in the Issue Department. If 4,000,000*l* should be taken from thence, the notes issued *from thence* would fall 4,000,000*l* also. The issue on securities is a fixed element,—that on bullion varies weekly as the bullion varies.

But, whatever may be the theoretical merits of this scheme in general, its applicability to a country like India is exceedingly dubious. We have, we must remember, to introduce a paper circulation *de novo* into India. No such currency now exists there. We cannot imitate the precedent of England, for all the circumstances are different. Long before such an institution as the Issue Department was thought of, there was a very extensive paper circulation in this country. When Sir R. Peel fixed the above as the amount which he proposed to issue on securities, he did so by settling the minimum below which it was not practically conceivable that the paper currency should be reduced. He took something under that minimum, and enacted that such should be the amount issued on securities. But in a country in which there is as yet no paper currency, or in which a paper currency has only recently been established, such a mode of proceeding would be futile. It would not be possible to fix a minimum below which the paper currency was not likely to be reduced. It might be reduced to nothing if a panic should seize on the native population. It would be necessary to fix *arbitrarily* the issue on securities,—to say it should be 1,000,000*l* or 2,000,000*l*. And there are obvious objections to introducing an arbitrary element into a scheme so important.

Even if the arbitrary amount of the issue on securities so arrived at should be found sufficient,—even if it gave confidence to the native population and sustained the credit of the Government, the problem would not be solved. There would be further difficulties to be conquered. The issues on securities would have to be extended from time to time, and at each step there would be much occasion for perplexity, and perhaps some danger of shocking the Asiatic mind. In this country, if an extension of the amount which is issued on securities is proposed, as it frequently is, the scheme is considered by the public, and discussed in Parliament and by the press. As yet such schemes have been rejected. In India, on the other hand, the discussion would be in fact official only. Under a despotic Government the public would have no voice in it, and would feel that they had no voice in it. The mass of the community would only know that their rulers had arrived at a decision which they had no means of altering or affecting. Nor could any intelligible rule be laid down on the subject. Under the system which is now officially proposed, it may be said by the Government that it will always keep *at least* one-third of the note currency in bullion; but under the plan more analogous to the Issue Department of the Bank of England the Government could only say: 'We will keep as much bullion as we from time to time may think expedient; we shall vary the amount which we keep when we think fit; we shall notify to you our decision, 'and you will of course have to abide by it.' We think there can be no doubt which of those two plans would give the greater confidence to our Indian fellow-subjects. They would much prefer a definite and intelligible rule to which the faith of the English Government should be distinctly pledged, to a varying and, as they would think, arbitrary regulation. The refined reasoning as to the nature of the Exchanges, and the possible depreciation of a convertible currency, on which the constitution of the Issue Department of the Bank of England is grounded, would be utterly unintelligible to the minds of Asiatics. All *they* would understand by an extension of the issue on securities would be, that the Government had *taken* their money and never intended to put it back again.

We have often shown that there is no reason to believe that a convertible currency will ever be depreciated, and explained our views as to the present structure of the Issue Department of the Bank of England. We have, therefore, no reason for recurring to the subject just now. It is much better that we should adopt such regulations respecting the Indian paper currency as will practically secure its convertibility, and will, in fact, satisfy the Indian people, than that we should occupy ourselves with difficult subtleties which were suggested by very different commercial phenomena.

THE SAVOY QUESTION IN ITS LAST PHASE.

The admirable tone, temper, and logic of Lord Palmerston's speech, on Tuesday night, on the proposed annexation of Savoy, has not resulted in any apparent modification in the designs of France. On the contrary, if a telegram received to-day is to be trusted, the Emperor has just made up his mind to refuse even those districts of Savoy whose neutrality has been guaranteed by the great Powers, to Switzerland,—we mean of course the districts of Chablais and Faucigny. If this be true, as we trust it is not, the policy of France appears to be in course of modification indeed, but in course of a very undesirable modification,—and to be more than ever likely to irritate the Continental Powers. The telegram states that the Swiss Envoy has been informed that "France "declines to enter into negotiations for ceding Chablais and "Faucigny to Switzerland." Now, not six weeks ago,—on the 5th of February,—Lord Cowley writes to Lord John Russell:—"While the French Government ask for guarantees "for the safety of France, they have no intention of violating "or infringing upon those which Europe has thought neces-"sary to take for her own safety. The annexation, there-"fore, of Savoy to France would not break the engagements "entered into for the neutrality of the districts of Chablais "and Faucigny. *Indeed, in the opinion of the French Govern-"ment, it would be well that these districts should be united "permanently to Switzerland.*" This is entirely inconsistent with the report of the attitude of France received to-day. And we can only hope that the latter information is not authentic. If it be, there will be real ground of alarm on the part of the European Powers as to the bearing of the new arrangement on the neutrality of Switzerland. And France, if she does not provoke a war at present, will yet be arming against herself the same class of jealousies which upset the first Empire.

We have always maintained that it would not be right nor possible for England to resist unconditionally by force of arms the annexation of Savoy. We have maintained that if Sardinia and the Savoyards themselves assent, the question is reduced to one of European *policy*,—and that, as a question of policy, the annexation of Tuscany to the North Italian kingdom is probably of more importance, as increasing the Italian check on French ambition, than even the possession of the Savoy mountains. And that Tuscany will be annexed to Sardinia, we can now, after the unanimous vote of the last week, scarcely doubt. But, of course, if in any way the neutrality of Switzerland be threatened, it is impossible to suppose that Europe can regard the solidification of Piedmontese power as any equivalent check upon France. The neutrality of Switzerland is, in every respect, of the first importance to the peace of Europe; and England, amongst other States, is bound by treaty to guarantee it. Burdened as we are, therefore, with the responsibility of this obligation, it is our paramount duty to look very carefully at all the territorial changes which render it more or less difficult for us to discharge it,—to protest against and resist those which make it difficult or impossible,—to substitute others which will enable us, whenever necessary, to redeem our pledge. Nothing is more obvious than that those who give a guarantee have a right to interfere with any arrangement which either enhances the cost, or in any other way interferes with the machinery of the guarantee.

Now, what is the nature of the English obligations with regard to Switzerland and the neutral territories of Savoy? The guarantee of the neutrality of Switzerland is as strong and decisive as frequent reiteration and the most solemn terms could make it. And the neutrality of the neutralised part of Savoy is, in the most express form, guaranteed by the same Powers who guarantee the neutrality of Switzerland itself. "The Powers acknowledge and also guarantee the neu-"trality of the portions of Savoy defined by the Act of the Con-"gress of Vienna of the 29th March, 1815, and by the treaty "of this day, as enjoying the neutrality of Switzerland in the "same way as if they formed part of her territory." It is clear, therefore, that England is bound in the most absolute

manner to guarantee the neutrality of Chablais and Faucigny as essential to the neutrality of Switzerland. It is also clear that such a change of masters in these districts as the change from Sardinia to France, is not easily reconcileable with England's duty in this respect. Were Sardinia to go to war, a mere warning on the part of the Great Powers to respect the neutral districts would be sufficient to prevent her from making use of neutral territory for warlike purposes. Treaty obligations apart, it would be the *wisest* course of such a Power as Sardinia to follow out literally the terms of the Treaty of Vienna. "When, therefore," says the Treaty, "the neighbouring Powers to Switzerland are in a state of "open or impending hostility, the troops of His Majesty the "King of Sardinia, which may be in those provinces [Chablais and Faucigny] shall retire, and may for that "purpose pass through the Vallais if necessary. "No other armed troops of any other Power shall "have the privilege of passing through, or remaining "in the said territories and provinces, excepting those which "the Swiss Confederation shall think proper to place there." Now, were France in possession of these territories, and at war with any of the guaranteeing Powers,—and were it of any importance to her to use these districts of Savoy for military purposes,—can we suppose for an instant that France would be as amenable to the advice of other Powers as Sardinia? The question answers itself; and, therefore, we say it is the duty of our Government to insist on an arrangement for the guaranteed territory which will enable us to discharge without difficulty the engagement we have entered into.

What the feeling of the people of Chablais and Faucigny themselves is, there is no manner of doubt. The Savoy papers, presented a week or two ago, contain the most express testimony to the almost unanimous wish on the part of the inhabitants that their territory should be annexed to the Swiss Confederation, if they are not to remain under the Sardinian Crown. What the people, then, unanimously wish,—what the French Government admitted as just to Lord Cowley only six weeks ago,—what is all but essential to our adequate discharge of the duties of a guaranteeing Power,—on this the British Government must take up their stand. Even the Emperor of the French cannot decently retract so express an assent to this measure as was contained in M. Thouvenel's statement to Lord Cowley in the first week of February.

RAGS IN FRANCE.

It has been announced that the French Government will propose to the Legislative Body the repeal of the prohibition on the export of rags, though it is not yet known how high an export duty they will impose in lieu of such prohibition. We may hope, however, that it will not be very high. The French Government have shown in various ways that they set a high value on the Commercial Treaty with England, and we may be sanguine that they will not do anything to weaken in reality the concessions they make in appearance.

We feel more sure on this subject, because our inquiries lead us to believe that the retention of the prohibition or the imposition of a duty on the exportation of rags from France would have very little effect on the manufacture of paper in that country. Some of our contemporaries are of a different opinion. They say that rags are now much cheaper in Paris than in London; that they will continue to be so; that the French manufacturer of paper will have the advantage of a cheap raw material; that our manufacturers will have the disadvantage of a dear one; and that, in consequence, the manufacture of paper and the capital engaged in it will migrate from England to France. What, then, are the facts?

Rags are in some sense not manufactured articles. They are what we may call *casual* articles. No one produces rags as rags. They are the waste and residue of certain fabrics which were produced for certain purposes, and have been cast aside because they are no longer suited to such purposes. Accordingly, the supply of such articles is governed by different rules from those which regulate the value of articles produced in the ordinary way. The supply of ordinary manufactured articles can be increased almost indefinitely. But with *refuse* commodities, such as rags, it is not so. There is only a certain quantity of these in the world; when it has been searched for and collected, there are no means of procuring more. An increased demand for such an article is, in consequence, almost sure to be soon followed by a great rise in the price.

We take the case before us. French rags are now most diligently collected through the rural districts. Many of the lower classes of peasant-proprietors have added much to their incomes by collecting them in their neighbourhood. In the large towns the trade of searching for rags is a special occupation, with a distinct name, and employs very many poor people. It would not be possible to augment the quantity of a commodity which has to be looked for in this manner. The search is already very complete. If, therefore, as has been suggested, the new demand for French paper consequent on the Treaty with England should cause an additional quantity to be produced, the price of the raw material would rise with extreme rapidity. So far from France having a sufficient supply of her own rags to make her own paper from, it is probable that she would be obliged to compete with us in the general markets of the world. At present England and the United States compete very warmly for the surplus supply of continental rags. Our own imports were as follows:—

Imports of Rags and other Materials for making Paper in 1858

	Tons.	Computed Real Value. £	Average Price per Ton. £ s d
Russia	1,668	35,549	21 6 3
Prussia	4,048	86,278	21 6 3
Bremen	294	6,276	21 6 3
Hamburg	3,073	65,488	21 6 3
Holland	135	2,888	21 6 3
Tuscany	508	12,954	25 10 0
Papal States	397	9,341	23 10 0
Austrian Italy	213	5,005	23 10 0
British East Indies	176	3,751	21 6 3
Australia	379	8,077	21 6 3
Other parts	488	10,526	21 11 5
	11,379	246,133	

The number of quarters from which the supply thus appears to be obtained is remarkable, and shows the great scarcity of the article almost everywhere. With a slight increase of demand, it would very soon become scarce and dear in France. Long before our paper trade, or a tenth or a hundredth part of our paper trade, had migrated to France, the price of rags in Paris would be as great or greater than that in London. We may be quite sure that our manufactures will not suffer from any such cause. The prohibition on exportation of rags from France shows that even at present the Government, instructed by the paper-makers, are well aware that the quantity that can be brought to market is exceedingly limited. They endeavour to monopolise what they have, because they believe that it is not more than enough for them. So soon as an additional demand springs up, they will find that the supply is insufficient. The scarcity of the raw material, which is the unfortunate characteristic of the paper trade, will affect the French manufacturer just as it affects others. Accordingly, though we are glad to hear that the Government of France will take the proper steps to procure a repeal of the prohibition on the export of rags, we do not think that it would have been of great consequence if they had refused to do so, or that our manufacturers would have suffered much in consequence.

THE TIMBER DUTIES.

The following letter has been addressed by the Chancellor of the Exchequer to Thomas M'Avity, Esq., of St John's, New Brunswick, in reply to one received from him in reference to the equalisation of the Timber Duties:—

Downing street, March 6.

Sir,—I feel some difficulty in replying to your letter of the 3rd, which I received yesterday afternoon on returning to town.

In that letter you "protest," as well as remonstrate, against any change in the duties levied in this country and paid by the English people upon wood from the colonies and from foreign countries respectively, until the inhabitants of New Brunswick shall have had an opportunity of stating their views upon the subject.

Were I to examine your language critically, I could not admit your title, even individually, to protest against any legislation which Parliament may think it right to adopt for the equalisation of the duties on foreign and colonial wood. And when you desire to remonstrate "on behalf of the inhabitants of a colony," I must observe that such remonstrances ought to be addressed to the

Secretary of State for the Colonies, who would exercise his discretion as to bringing them before the Minister of Finance.

As, however, you are about to quit England without delay, I waive all regard to these considerations, and I must beg leave to apprise you that I am aware of no circumstance or argument which could have led any person interested in the colonial timber trade, and exercising ordinary prudence, to reckon on the permanence of a law which charges differential duties upon timber the produce of foreign countries.

At the former periods when those differential duties have been reduced, I am aware of no pledge that has been given that in this particular case any duty of the kind should be permanently maintained. If no such expectation could be formed from a distinct pledge of the British Government, still less could it be founded on the general policy and legislation of this country.

That legislation has for a long series of years been founded upon the policy of abating, and then destroying, or of destroying at once, differential duties; it was applied with great stringency to some cases of colonial produce, even under peculiar circumstances; it has been applied in the case of wood from British North America with much caution, and by degrees so slow, that the wonder is, not that Parliament should now decline, without a dissentient voice, to sanction the continuance of the differential duties, but rather that it should, for so long a time, have permitted them to continue.

You describe this change as destructive of the trade and of the property of the colonists. If so, it can only be so because the differential duty exacts from the people of England, who provide for the military and naval defence of New Brunswick at their own charge, an artificial price for its produce; and the demand for the permanent maintenance of that artificial price would thus be a demand, in effect, for the permanent payment of a tribute from the mother country, not, indeed, to the colony at large, but to a portion of its inhabitants.

I am not, however, prepared to admit that the change deserves the character which you give it.

The predictions of ruin which you and some others now tender to the Government are not new. They have many times been repeated, and were much more loudly uttered in 1842 than they now are, by much more numerous witnesses, not less informed of the circumstances, and with not less unquestionable good faith. Yet the result has been of a character totally opposite to what was anticipated; and the very statements which are now sent in to deprecate the present change, are based upon allegations of facts with reference to the present state of the colony, that themselves bear witness to the fallacy of their sinister prophecies.

To place the colonies in any respect under the pressure of legal inequality would be repugnant to every feeling of the British Government. To give them the benefit of freedom in trade has been their early and anxious desire; but they cannot decline to make proposals upon a proper opportunity, which will, at length, extend these benefits to others, and among them to the people of England.

As this letter, with your own, touches on a matter of public interest, it might, perhaps, be convenient that they should be published; but I shall take no such step as to your letter, if I am given to understand that you disapprove of it.—I have the honour to be, Sir, your obedient servant,

(Signed) W. E. Gladstone.

J. M'Avity, Esq.

THE CUSTOMS ACTS.

The following suggestions have been addressed to Mr Gladstone by an influential committee of London merchants:—

London, March 3.

Sir,—In compliance with the obliging wish contained in your favour of the 21st ult., we have the honour to submit for your consideration the following suggestions, more specifically embodying the objections we entertain to resolutions 11, 12, and 13, to be proposed in the Committee on Customs Acts, and resolutions 1 and 2 in Committee of Ways and Means.

We stated in our previous communication that, by the action of resolution 11, various articles of import and export would be subject to severe and unequal pressure. This is easily capable of demonstration.

The 1d on a package of tea, tobacco, sugar, silk, indigo, &c., or upon any article of this valuable nature, is doubtless a mere trifle, and any inequalities could be readily adjusted; but there are many descriptions of goods of small value, ranging from 2s to 10s per package, upon which this charge will amount to from one to four per cent., or fully as much as the entire profit to be expected to be derived by the merchant. The transhipment of goods to the colonies and to foreign countries, is the trade most likely to be affected by this measure; a branch of commerce, in our opinion, of such vast importance, as to deserve every possible facility for its extension, being the unmistakeable evidence of the well-working of the system by which this country maintains its position as the emporium of the world.

The only apparent solution of the difficulty offers itself in the shape of an *ad valorem* tariff; but this, we believe, would oppose impediments to trade equally obnoxious. It would necessitate continual references to the scale established, would cause constant collisions with the Customs officers, and would render necessary formalities at the time of shipment most vexatious and fertile in causes of delay. No sufficient indication has been given of the mode by which this tax is proposed to be collected; but, so far we can learn, this point also is surrounded with almost insurmountable difficulties.

We take leave now to comment upon the reasons given for the imposition of this tax.

1. That it is needful for the purpose of obtaining more correct statistics of trade. This we cannot admit in any shape. It is proposed to be charged upon articles already paying duty, of which the statistics are necessarily perfect, while of non-dutiable articles it will merely serve to show that a certain number of packages paid 1d each, without specifying either quantity or quality.

2. That because four-fifths of the export and import trade of the country is absolutely relieved from the pressure of Customs duties, this due is intended to make a moderate contribution from trade itself towards the heavy charge of the Customs; but surely we may urge that the converse of this proposition is equally true, and that at present the whole pressure of Customs duties is borne by one-fifth of the trade of the country (almost entirely the importation of foreign and colonial produce), upon which, as we do not observe that there is any intention to make a distinction between free goods and those already subject to duty, it is now proposed to levy this and other new taxes.

Having now stated our objections to this resolution, we think it due to your courtesy to add that, observing it is your opinion that the requisite "classification will not be difficult," we beg to tender our practical experience, if required, in aid of the result you anticipate.

The 12th resolution has received such unanimous condemnation at the hands of every person able to form an estimate of its probable effect, that we accept with pleasure the intimation that in regard to it, "a different form of proceeding may be preferable."

The warehousing charges we observe are also admitted to be too high and susceptible of alteration. This, a very cursory glance at the actual amount to be charged on particular articles clearly demonstrates.

Some of the operations are necessarily inherent to the goods operated upon.

Some are for the convenience of trade.

Some are called for by reason of damage in transit from the place of production.

Of the first are coffee, sugar, pepper, &c.; on these the dock charge for performing the operations averages about 4d and 6d, while it is proposed that the Customs shall receive 1s per package for permitting them. Those for the convenience of trade, such as repacking into small packages, &c., are rated equally out of proportion to the duties discharged; while we can only suppose the application of the tax to the last class can scarcely be intended.

Taking one article as an example—viz., tea—which already contributes one-fifth of the Customs revenue of the country, the charge proposed is on the average tenfold greater than that now made by the Customs, and would exceed the actual amount of the charges of the dock companies, by whom the operations in question are, in fact, performed.

It should also be remembered that these operations have the object of rendering merchantable the goods operated upon, which however much deteriorated, contrary to the customs of some other countries, pay the same duty as if sound. A portion of these would otherwise require to be destroyed, and so occasion a loss of the entire duty to the Government. Finally, we beg, with due respect, to remark that all these changes upon dutiable articles, form an appreciable addition to the Customs duties already fixed by Parliament, while upon two of the most important and of prime necessities, war duties have been continued for the purpose of giving relief to the consumers of various imports, chiefly wines and spirits.

With regard to the proposed stamp upon dock warrants, it gives us sincere gratification to learn that the resolution as worded is not intended to apply to all the cases which were supposed to have been comprised in it. It is impossible to value too highly the advantages of the warrant system; and we are of opinion that any cause tending to lessen its widest application would be a heavy blow to trade. We would respectfully submit that the impost of 3d, though apparently low, will be a serious charge upon some articles for which warrants are taken out, and that the necessities of the case might be met by reducing it to 1d, from which, in all probability, as great a revenue would be derived.

The resolution in regard to contracts is so general, comprising apparently every transaction of commerce, and the limitations expressed in your favour under reply are so undefined, that we feel a difficulty in giving an opinion on the subject. We confine ourselves, therefore, for the present, to suggesting that, at all events, should your decision be adverse to our views, no doubt should be left as to the case to which the impost may be intended legally to apply, and that the same transaction should not be liable to more than one charge.

With reference to the proposal that dealers in bonded goods should be required to take out an annual licence, we find it difficult to arrive at the true feeling on a point merely suggested

but it seems to be considered undesirable to single out any class of individuals for taxation.

We cannot close this letter without offering our most respectful thanks for the courteous manner in which the expression of our opinions has been received; and are much gratified to learn that, although it has not been found possible at once to meet our views in their entirety, some modifications have already been admitted, and the subject is still receiving consideration at your hands.

We venture to trespass still further upon this consideration, in begging that the constant changes taking place in our commercial relations with the different countries of the world may not be overlooked. The present means of rapid intercommunication, daily being extended by science and mechanical ingenuity, bring into nearer proximity the various marts of production and consumption. The unceasing repetition of operations is thereby compelled, while competition becomes greater and profits decrease in a corresponding ratio.

For these reasons the utmost attainable liberty of action, free from impeding restrictions, is indispensable to the remunerative application of the capital and skill employed in commerce.

Begging to tender any statistical information or explanations on any special points that may be desired, either verbally or in writing, we have the honour to remain, Sir, your most obedient humble servants, (for the Committee of Importers and Others),

CHARLES MAGNIAC.

The Right Hon. W. E. Gladstone, &c., Downing street.

Agriculture.

THE PROFITS OF FARMING.

WE have always asserted that the profits commonly made by English farmers by no means form a fair measure of the rate of profit which might, under circumstances reasonably favourable, be derived from the cultivation of land. We find in the system of market gardening an instance of large outlays on comparatively small areas of land resulting in immense gross produce and considerable profit. Now, why is not this system applicable to ordinary farm cultivation? The methods of applying the outlay would be different, but the principle would be similar. There are, however, practical difficulties and obstacles to the best methods of cultivating farming land from which market gardeners are exempt. Indeed, market gardening could not exist under the difficulties to which most farmers are subjected. To render the land capable of its maximum production, it must be naturally dry, or rendered so by draining; the staple must be deep, and kept so by deep tillage; and an abundant supply of manure must be constantly available. These things are necessary equally to farming and market garden land. Then the farm requires in addition good occupation roads, suitable division fences, freedom from hedge-row timber, and such ample accommodation for live stock as will enable the farmer profitably to make a large quantity of manure. Moreover, both market gardener and farmer must be secured in possession of their land for such periods as will justify them in making the large expenditures both must make to obtain a *maximum* produce. Now it is notorious that very few of these conditions are secured by farmers. Nay, the very reverse is the ordinary state of things, so that, in general, English farmers follow the pursuit of farming under no ordinary difficulties. Such being the usual position in which farmers are placed, they are apt to regard with incredulity and almost with anger any statements of profits made by farming which exceed the moderate rates they find they can themselves secure.

This has often caused something of an outcry against Mr Mechi, when he has, as he has, from time to time stated what his own profits in farming have been. Without professing to entertain a very high opinion of Mr Mechi's accuracy, we certainly see no reason for disbelieving that he has made a fair profit by farming 170 acres of his own land at Tiptree. We have seen the farm, and though in its original state the land was poor and barren, yet when well drained, deeply cultivated, and well manured, it is capable of becoming, and has in fact become useful, perhaps we might say good land. In a recent lecture or discussion, that gentleman said that from his 170 acres he derives as landlord and occupier a profit of 700*l* per annum. This has raised a storm about his ears in the Farmers' Club, and amongst not a few farmers throughout the country. In justification, he has this week published a letter in the *Times*, wherein, after some reflections on the unimproved state of most farms, and the not very improving habits of a large class of farmers, he gives the particulars of his expenditure and receipts on his 170 acres. From these we extract the following data:—

	£	s	d
His rent at 42s per acre (including 6s per acre for his irrigating apparatus)	357	0	0
His general expenses (amounting to 7*l* 9s 8d per acre)	1,272	3	4
Total outlay	1,629	3	4
Per contra.			
His gross receipts from produce sold are	1,884	0	0
The difference being	254	16	8

which is applicable to interest on the capital, 2,380*l*, employed in carrying on the farm. Now, deducting 5 per cent.=119*l* on that capital, there will be 135*l* 16s 8d, or something more than 5 per cent. on the capital left to the farmer as pure tenant's profit.

Really there is nothing extraordinary in such a return. Probably there are few traders who would be satisfied with this result from a year's use of such an amount of their own capital.

Neither do we believe it to be a very extraordinary result from the employment of a similar amount of capital in farming, the chief difference between Mr Mechi's plan of employing it and that of other farmers who do so with equal profit being that they employ their capital on a larger extent of land. They force their land less than he does, making a smaller outlay per acre, with a less acreable return,—the reason being partly the less improved state of their land, and partly the system and habit of farming business. Mr Mechi gives as the sources of his receipts the following particulars:—

				£	s	d
310	quarters of	wheat, the produce of 56	acres, at 42s	651	0	0
40	—	barley — — 6½	— 39s	78	0	0
110	—	beans — — 19½	— 34s	187	0	0
80	—	oats — — 11½	— 16s	64	0	0
	(The oats a failure, being laid early and much injured.)					
6 acres of white clover seed, and 1 acre of red ditto				65	0	0
Sundries (roots, &c.) sold				30	0	0
Clover hay sold				55	0	0
Grass hay sold				20	0	0

	£	s	d			
Meat, wool, dairy produce, and poultry sold	1,279	0	0			
Deduct lean stock purchased	545	0	0			
				734	0	0

The crops are large, but by no means extraordinary where the land has been improved and well cultivated for many years. And the principle of Mr Mechi's system, which is large outlay on a limited area, is decidedly a sound one, and is, in fact, that of all modern farming. We may refer to the report of Mr A. Simpson's farming in Aberdeenshire, which obtained the prize of the Highland and Agricultural Society, upon which we commented in our paper of the 11th February last, from which it appeared that by the employment of a capital of 3,418*l* 10s, a profit—*i.e.* interest and profit—of 274*l* 8s 1d per annum was obtained for the years 1856 and 1857. Besides which he had a house rent free and the use of a horse and chaise for personal and family use. It is true this was accomplished on 313 acres. The returns in money amount to about 8*l* per cent. on the capital, but, though less than Mr Mechi's, it is sufficiently near it to show that his asserted return is not impracticable or incredible. His better profit has probably arisen from the circumstance of difference we have mentioned, viz., the greater concentration of capital, a larger outlay per acre for the sake of a greater acreable produce. The advantages of this are almost too obvious to be required to be more than mentioned. But let us illustrate it by comparing the two statements. Mr Mechi received 651*l* for his wheat crop, while Mr Simpson's only produced 574*l* 5s 6d. Mr Mechi's came from 56 acres; Mr Simpson's from rather more than 62 acres, his rotation being a five-course shift. Now, the rent, taxes, horse and manual labour, and seed for the 62 acres of wheat which produced in money 574*l* 5s 6d, must be considerably more than the same outlays on the 56 acres of wheat which gave the money return of 651*l*, and hence the advantage is all on the side of the system of concentration pursued by Mr Mechi. How far this is to be carried must of course be a matter for the consideration and experience of each cultivator, but of the soundness of the principle there can be no doubt. We may remark, that against the savings effected by the higher cultivation of a smaller area, must probably be set a larger expenditure for manure, and perhaps a more elaborate and expensive tillage.

TOWN SEWAGE.

THE agricultural value of town sewage can scarcely be considered to be at present a practical question. It is a subject which has been discussed with considerable heat at the Society of Arts, the explanation of which probably is, that there are some persons who would promote a sewage manure company if the public could be induced to invest their money in such a venture. We cannot encourage such a speculation, for it appears to us to be a most hopeless one. If and when town sewage shall be made useful, it will be by conducting it to meadow or marsh land by natural gravitation. Such is the opinion of many of the most thoughtful and experienced agricultural chemists.

Thus Dr Gilbert, the coadjutor of Mr Lawes, has favoured us with a long communication on this subject, of which we shall state the practical results. He refers to Mr Mechi's statement, in his paper read at the Society of Arts, that the excretal matters of two persons of a town population will be equal to the manure of two sheep, and that the latter will, in the course of a year, be diluted by 2,600=25 inches of rain,—the former, as contained in town sewage, will be mixed only with 160 tons of water. Hence, he argues that town sewage is of much greater agricultural value than the manure of animals made on the farm. It seems that the excreta of two persons, if brought to the same condition of dryness and non-putrescence as Peruvian guano, would be equal in weight to 1 cwt of that manure, worth 3s 4d. But the question is, how to get this 1 cwt of manure, together with 160 tons of water, on the land. That is the obstacle, to surmount which no plausible plan has been suggested.

Dr Gilbert, referring to Mr Mechi's view that the population of London, amounting to three millions, creates a sewage of 80 tons per head per annum, and that such sewage should be distributed over and would fertilise 500,000 acres of land, says:—

Adopting the figures just quoted, the excretal matters, &c., of six individuals of the mixed population, of both sexes and all ages, would be appropriated to each acre of land. The constituents of the excreta of these six persons, if brought to the same condition of dryness and non-putrescence as Peruvian guano, would be worth about as much as 3 cwts of that substance—say 40 shillings, or 480 pence. But these 480 pence-worth of excretal matters (at the the rate of 80 tons per head per annum of water supply and rain-fall), would be distributed through 480 tons of water. It is obvious, therefore, that we have only to suppose the cost of distribution of the sewage over 500,000 acres to be at the rate of 1 penny per ton, and the manure of each acre would, on such a supposition, cost *for distribution alone*, 480 pence, or 40 shillings;—that is to say, exactly the estimated value of the constituents if taken to the land in the portable condition of guano.

Of course this would not pay. But the better way would be to distribute that quantity over a smaller area. According to Dr Gilbert:—

But so far as the experience of liquid manure farms can be called to our aid, the conclusion would be, that the sewage would yield the most produce, if applied either exclusively to grass land, or, in the case of rotation, almost exclusively to the grass crop of the course. Now, 500,000 acres is certainly much more than would be necessary to receive the sewage of London if the whole were under grass. Let us, then, for the sake of argument, suppose that it were under a four-course rotation, and that, in accordance with the experience of the most successful Ayrshire liquid manure farms, the whole, or nearly the whole, of the liquid, were put upon one-fourth of the land (the grass crop) each year. We should then have costly arrangements for the distribution over 500,000 acres, at the rate of 480 tons of liquid per acre per annum, whilst only 125,000 acres would receive the liquid each year, but at the rate of 1,920 tons of liquid per acre. It may be asked—would the advantage derived by the three other crops of the course, either from the occasional direct application of sewage to them, or from their following on the broken-up sewage-manured grass land, compensate for a somewhere about fourfold expenditure for distribution?

Supposing this question were answered in the negative, the obvious conclusion would be, to confine the distribution to grass land. Nor, do I think there need be much doubt, that, if the application were so confined, the area might be considerably below 125,000 acres to secure the maximum crops over a given area. The area here supposed would imply that about 2,000 tons of sewage, containing the excretal matters, &c., of about 24 individuals (equal in present estimated money value of constituents to about 12 cwts of Peruvian guano), are to be applied to each acre of grass land.

Even greater concentration would be better still,—for, though it might occasion a somewhat excessive supply of sewage manure, that would be more than compensated by the diminished cost of the distribution. And Dr Gilbert suggests that 10,000 tons of sewage, as a maximum, might be distributed over 20,000 acres, but "the exact point at which the waste of manurial constituents would be compensated by limitation of area, could only be settled by actual experience." And he adds:—

It cannot for a moment be doubted, that an enormous increase of produce would result from the application to the land of the excretal matters of our town populations; and certainly, least of all could those doubt it, who, like Mr Lawes and myself, have devoted so much time and labour in investigating the chemical and agricultural bearings of the subject. Nor can it be doubted, that these excretal matters, even when distributed through the enormous bulk of water as in town sewage, would, if judiciously applied, enormously increase the produce, particularly of certain crops. But is there in these admissions alone, any basis upon which to conclude that the increase of produce would be obtained *remuneratively?* Certainly not. All the evidence that can be adduced, showing the enormous increase of agricultural produce from the use of diluted liquid manure, is utterly irrelevant to the question in a *commercial point of view*, unless it can at the same time be shown that such an increase can be obtained *at a profit*.

That is the real question, and it is this problem the earnest advocates of utilising town sewage have to solve.

Literature.

My Diary in India: in the Year 1858-9. By W. H. Russell, LL.D., Special Correspondent of the *Times*. With Illustrations. London: Routledge. 1860.

Diaries of all kinds are liable to prove, on publication, lengthy, tedious, and unsatisfactory. No subject can be thoroughly and connectedly treated, no thought fully worked out, in that which is little more than a note-book of the incidents or gossip of the day. The style and tone of such a composition can hardly be very vigorous or dignified; and both are apt to become slipshod, petty, and personal. The diaries of travellers and statesmen of superior ability, if well written or well edited, may be exceptions to the general rule; for the former record incidents and impressions which give us a series of pen-and-ink sketches of scenes we should like to see, and the latter fill up the personal details of events with whose historical outline we are familiar, and of which we wish to know more. But diaries in general contain much unmeaning and trivial gossip and uninteresting narrative, while their merits do not often rise higher than those of humour and fluency, amusing or characteristic anecdotes scattered more or less sparsely through level pages of insipidity, or occasional scraps of valuable information.

In saying, then, that Mr Russell's "Diary in India" is one of the best diaries we remember to have read, we are not asserting for it either high excellence as a literary work, or great value as a record of what a clever man saw and thought of Indian life and Indian service. There is neither much information nor much amusement to be gleaned from its pages. But it is readable, and would have been more than readable had it been condensed into half its present bulk; it does contain some good stories, and many excellently-drawn pictures of stirring events, which, if we have seen their like before in the columns of the *Times*, are nevertheless worth preservation in a more permanent form; and it does afford a good many facts illustrative of the only distinct idea which seems to remain on the writer's mind respecting the general condition of the country through which he followed the victorious march of the British armies—an idea of which, with the instances given in its support, we shall have more to say. Then we get from these two volumes a general notion of the discomfort and misery of camp life, especially in India; of the confused scramble in the rear, where baggage and sick and camp-followers are crowded, when the army is in motion; of the semi-comic miseries of the night-marches, necessarily so frequent where the thermometer at noon may be above 100 degs. in the shade; and of the delights of out-of-door life under the circumstances in which the soldiers, the staff, and the *Times* correspondent too, contrived to do their work and to enjoy themselves not a little. A general atmosphere of dust-storms, mosquitoes, and "furnace blasts," it is true, pervades the reader's recollections, and renders it difficult to obtain a clear view of the cities of canvas in which the army lived, or the clouds of camp-followers and trains of baggage waggons in the midst of which its close small columns moved; but probably the same unpleasant haze would obscure his retrospect, had he actually accompanied the graphic diarist on his laborious journey. And though the small discomforts of camp and march are made unpleasantly intelligible to the reader, still it is worth while to go through musquitoes, and dust-storms, and camp smells with Mr Russell, in order to see with his eyes the siege and storm of Lucknow. This is the really valuable part of his book; as the accidents which befel him, and the ill-health which supervened, drove him to the hills not long afterwards, and forbade him to accompany the army to the conclusion of its labours. The description of the parts of the attack which he actually witnessed, and of his personal adventures, serves to give to civilian readers a better notion of the nature and incidents of such a conflict, and the appearance which it presents to a spectator, than any account of the actual proceedings of the siege, or the course of the different storming parties. To commend the vividness and skill of Mr Russell's word-painting would be assuredly a work of supererogation.

Of course the diarist is egotistical, and of course the endeavours made to conceal egotism under general disclaimers of any pretensions to personal merit only render it more perceptible. There is a good deal too much of "the pride that apes humility" in his account of his personal relations with the Commander-in-Chief and staff of the Indian army: and it is quite evident that his Crimean influence and popularity at home have spoilt "our own Correspondent." But he has the power of putting his readers on so friendly a footing with him, that they easily forgive him for being on such superlatively good terms with himself. It is only when his personal feelings colour his representations of others that we find serious reason to complain of him. He involved himself in a personal quarrel with the Indian press, and revenges himself by a few sentences of savage and contemptuous vituperation, in which he is by no means careful to admit the real excellence of the few Anglo-Indian papers which are managed by educated gentlemen. He was hail-fellow-well-met with the military officers; and he shows his appreciation of their cordiality by embracing every little quarrel of theirs with the civil authorities, towards whom his tone is much less respectful than the merits of the best Civil Service in the world deserved. These, and other blemishes, we cannot pass without notice in recommending the book to those among our readers who have leisure to read any more about the Indian mutiny.

Our recommendation rests particularly upon the merit to which we before alluded—the forcible manner in which Mr Russell has brought before us the state of feeling between the recent European settlers and lately appointed officials and the natives. We gather from his book that, while many, if not most, of the old Indian officers, civil and military, were well disposed and kind to the people and the native soldiery, understood and sympathised with their prejudices and feelings, the settlers or "interlopers" have been lawless and brutal, the young officers—those of the army especially—insolent and tyrannical. No doubt the East India Company—peace to their ashes—were quite right in anticipating much mischief from the intrusion upon their domains of European adventurers, belonging to the ruling caste and yet not invested with the responsibility of rule, able to oppress the natives without being effectually amenable to the control of Government. The tone assumed by this class during the recent turmoil and confusion of affairs, their insolent pretensions to be formed into a dominant aristocracy, and to share, as "the people of India," in the government of the country wherein they are seeking

their fortunes, as well as their virulent and unscrupulous clamour against the able and equitable administration of Lord Canning, who neither shared their coward fears in the extremity of peril nor their vengeful passions in the hour of victory, have proved them utterly unfit for that amount of arbitrary power and uncontrolled license which every European at a distance from the seat of Government enjoys among the subject population of India. Mr Russell remarks that "if Europeans are not restrained by education and humanity from giving vent to their angry passions, there is little chance of their being punished for anything short of murder." And most of the Englishmen who go out to the work of indigo-planters, railway contractors and head-workmen, and so forth—in which positions they have control over vast numbers of native labourers, who are absolutely at their mercy—have no education to restrain them, and look upon the "niggers" with as little humanity as an American cotton-planter. Here, as elsewhere, the "collective wisdom" of the Imperial Parliament, acting with irresistible confidence in its own omniscience, overbore the knowledge and experience of all qualified advisers; and "public opinion," which supported it, is hardly likely to correct its errors by careful attention to their consequences.

The conduct of the young officers of the army—who went out to India with a muttered anathema upon the hardship of being sent so far from home, and with none of that honest resolution to make it their home and do their work there with earnestness and thoroughness which characterised their predecessors—has doubtless contributed not a little to the alienation of the native soldiery. These men had been treated with confidence and kindness by the officers of the old school, whose paternal despotism had been administered in such a manner as at once to win affection and command obedience. Their loyalty had first been weakened by the folly of the rulers who came out, sent by the English Government with English ideas and merely European experience, who diminished and almost destroyed the authority of the regimental commanding officers. It was further shaken by the foolish insolence of the young men fresh from English schools, who aped the manners of the Queen's service, insulted the native officers, who had been the humble friends and confidants of their seniors, and kept the native soldiers at a distance. The elder officers saw the mischief of this state of things, and were inclined to regard it as, in many cases, one of the principal causes of mutiny. But for the alienation and mutual suspicion, they said, between sepoy and subaltern officers their regiments at least would have remained faithful. But the men disliked and feared their immediate superiors; and the latter had neither regard for, nor trust in, the men. Of the notion of law and justice entertained by the younger officers of both the Queen's and the [late] Company's service, the following anecdote is characteristic:—

An officer entered and sat down at table. After compliments, as the natives say—

Briton (loquitur.)—"I say, Lord William, I want to ask your advice. Can I lick a fellow for serving me with a summons—a writ, you know?"

Lord William.—"No. If you lick a man you must take the consequences. Do you owe the money?"

Briton.—"Why, yes; but the d——d nigger came up and annoyed me, and I want to give him a hiding. It's too bad that gentlemen should be insulted this way by those confounded impudent rascals about the courts."

Lord William.—"Well: but you know those men must do their duty; and they must be protected in the discharge of it. As you have asked me, I must beg of you not to think of such a thing, or my assistant will have to notice the case."

Briton.—"The whole country's going to the d——l! How can you expect gentlemen to come here to be insulted by those bazaar blackguards and those confounded summon servers? I'll lick," &c., &c., &c. [Exit.]

How can we preserve the loyalty of an army where the best deserving men are treated in the fashion next described by young officers, fresh let us hope from school, and innocent of that training in the manners becoming officers and gentlemen which military life should give?—

Here comes a trooper—a tall fine old fellow, with face as fair as many a sunburnt soldier from England—he carries a despatch for the Lord Sahib—he has ridden with it fifty miles through a country full of rebels. The old Sikh asks for the tent of the chief; he dismounts, sticks his lance in the ground, fastens his panting horse to it, and stalks in his long leather boots—his heels, perhaps, stuck up in a crease of the leather six inches above the ankle—through the camp. It is ten to one if a soul notices him, and if he goes to a wrong tent he is saluted with an adjuration, and a request to go to a place far beyond the limits of the camp by the angry young gentleman who has been disturbed in his "Pendennis," or in the contemplation of a fine "ash." The old soldier will follow his own sahib to the last; but for strange sahibs he has not much regard, and he thinks it's their nature to be rough and rude, and so he shuffles forward on his cruise, looking hopelessly about for the dera, till some kind mortal compassionates his distress. What is the old trooper's revenge? Why, he sticks in our service, saving up money and remitting it to his family—retires on his pension, and then, when his last hour is near, his last act is to try and get his name "scratched," so that he may *die* in the service of the stranger.

The missionaries and the ladies have, we fear, done not a little to aggravate the alienation between British and Indians, and to deteriorate the character of our rule in the East. Women are notoriously more sensitive to the pride of caste, and less careful and considerate of the rights and feelings of inferiors, than men are wont to be. In their treatment of horses they are proverbially inconsiderate; towards servants, always more prone to exaction and less willing to spare and assist, than men are; towards employés of a rank more near their own, too often arrogant and haughty as men are not disposed to prove. And we fear that the presence of English ladies in large numbers in the Eastern stations and cities has tended to foster the tone of haughtiness and indifference now assumed towards the natives, as it has certainly helped to create an exclusively European social world, with which natives have no connection, and in which the masters of India live more than they ought to do.

What is worse, the ladies have co-operated with the zealous but reckless and intolerant preachers of various sects whom the Christian enthusiasm of this country has poured into India, in the enforcement upon officers of all ranks and services of a policy and demeanour towards the natives on religious questions which is at once criminal and foolish. It is our duty, as rulers over millions of inhabitants of a different religion from our own, to treat their creed with respect; it is our policy, as dependent on native arms in no small degree for the security of our rule, to avoid shocking native religious prejudices. As an infinitesimal minority of the population, we have no right to enforce on the natives respect for the observances of our own religion. Unhappily the men we have sent out to India as missionaries are incapable of appreciating such propositions. Their temper is rather Mahometan than Christian; and if they dare not openly propose the conversion of India by the sword, they do their best to render any other mode of conversion hopeless, by attempting to enforce a regard to Christian forms and usages which, enjoined not by a Christian spirit but by superior force, only tends to excite in the minds of the coerced dislike both to European rule and European religion. Such an incident as the following proves how far this pernicious influence has spread:—

As we were driving home this evening Mr Melville told me that some time ago the Rajah of Puttiala came to visit Sir John Lawrence, who was encamped near Umballa, and that he entered the camp with his band playing and his Tomboruks firing; but as it happened to be Sunday, Mr Melville desired him to desist. The Rajah was much humbled and annoyed. He said he should be disgraced among all his relations, and in the neighbouring States, if he dispensed with the necessary ceremonials of his rank; but the deputy-commissioner was resolute. "Why," I asked, "was he allowed to come on Sunday at all?" "Ah, well! Yes, *that* was wrong."

But it was our wrong; our great men always fix the time when they propose to receive the visits of natives. Suppose Her Majesty the Queen invited the French Emperor to Osborne on a Sunday, and then sent him word she could not permit him to have a salute fired.

Of course the mutiny has increased terribly all the evils and difficulties of European government in India. It has sown rooted and mutual distrust between the governors and the governed. The Europeans have been exasperated by the murder of women and children, and still more by the reported, but never proved, outrages to the former,—offences common in war, usual if not universal in Oriental wars, but calculated to excite to fury the feelings of a nation whose native land has remained free from the horrors of war for four centuries. The natives have been terrified by the fearful ferocity displayed by their British conquerors in the last struggle, as well as shaken by the sudden dissolution of the bonds which had lasted so long, and by the unhappy mistakes which, as seems but too probable, were made in dealing with some of the suspected regiments. The numbers of men hanged and shot on suspicion, or without suspicion, by some of our officers and flying corps were frightfully large; the acts of savage revenge perpetrated by individuals after assaults of fortifications are horrible to read. We quote one instance; by no means a solitary one:—

After the Fusiliers had got to the gateway, a Cashmere boy came towards the post, leading a blind and aged man, and throwing himself at the feet of an officer, asked for protection. That officer, as I was informed by his comrades, drew his revolver, and snapped it at the wretched suppliant's head. The men cried "shame" on him. Again he pulled the trigger—again the caps missed; again he pulled, and once more the weapon refused its task. The fourth time—thrice had he time to relent—the gallant officer succeeded, and the boy's life-blood flowed at his feet, amid the indignation and the outcries of his men!

With this terrible story we take our leave of Mr Russell's Diary; cordially commending it as a book worth attentive reading, but declining to warrant it as an impartial guide or reliable authority.

Political and Legislative Considerations on National Defence. Addressed to the People of England. By General Sir Robert Gardiner, G.C.B., Royal Artillery. London: Byfield, Hawksworth, and Co. 1860.

A Few Words on the Military Organisation of Great Britain. By Centurion. London: Ridgway. 1860.

The Invasion of England Rendered Impossible, by a Simple and Practical Mode of Defence. Also an Account of Eight Attempts at Invasion. By a Member of the Royal Naval and Military Institution. London: Hardwicke. 1860.

The pamphlet literature of the present day, though dull enough to contemporaries, will form an inexhaustible mine of information to the Dryasdusts of a future generation. The Macaulays of a century or two hence must be pitied. Instead of seeking for light on the obscurer points of history in the ballads and traditions of the peasantry, handed down by oral transmission from father to son, the historiographer of the reign of Queen Victoria will find it needful

to familiarise himself with "the Ridgway pamphlets," and other invaluable collections, which industrious men will be paid to classify and index. The chance scrawlings on the walls of Pompeii, which justly excited the disgust and contempt of the passer-by on whom they obtruded their filthy nonsense, are now as justly the objects of laborious research and explanation by grave and learned men. They possess real interest and value. Even so, the dullest scribbler, ambitious of the honour of print, may accidentally supply materials for history. As the higher literature of a time is the best representative of the permanent spirit of the time, so its pamphlet literature represents its changing moods of hope and apprehension, its jealousies and delusions, its projects and passing aims. The reviews and newspapers do this, it is true, to a very considerable extent, but not so completely as to obviate the necessity of the pamphlet. Periodical literature, in its several forms, generally expresses almost exclusively the policy and principles of great parties, or of influential sections of parties, or at the very least, of associated cliques and coteries. The unrestrained utterance of individual opinion on the affairs of the day can be found only in the pamphlet of the day, the writers of which may be divided into three classes. There are, first, those who are intellectually below the level of the most indulgent even of unpaying editors; secondly, those whose "crotchets" and peculiarities exclude them from journals pledged to particular views; and, thirdly, those whose names on a titlepage carry with them a weight and authority greater than even the most influential periodical could confer on an anonymous contributor. These classes, however, like species in nature, are not very strictly marked off from each other. The last class is very slenderly represented, except when it coincides with the second. The first is numerically in excess over both the others combined. We shall not attempt now to determine to which of them the authors of the essays named at the head of these remarks respectively belong, but shall leave our readers to draw their own inferences from the criticism and statements which we may have occasion to make upon them. The pamphlets form only a very small selection from the great number of *brochures* on military subjects which the Volunteer Movement, the debates on the Estimates, the reports of Commissions, and the general agitation of the subject of National Defences have called forth.

The military rank and services of Sir Robert Gardiner, and the evident earnestness by which he is animated, entitle him to serious attention,—which, however, his mode of expressing himself renders it sometimes difficult to give. He writes much as Mr Dickens's Lincolnshire baronet used to speak. We have several times been reminded of Sir Leicester Dedlock's remarks on "the bursting open of the floodgates of society, and the obliteration of the landmarks of framework of the cohesion by which things are held together." The confused magniloquence of Sir R. Gardiner's style springs no doubt from an honest attempt to rise to the level of his subject. The bulk of his pamphlet is unnecessarily increased, and its worth decreased, by his introduction of a great many topics wholly irrelevant to its principal theme. Sir R. Gardiner entertains strong opinions on a great variety of subjects, political and social, foreign and domestic, and, having taken pen in hand, seems to have been unable to refrain from giving expression to them, in the most unexpected places and connections. Bribery at elections and the character of Francis Joseph of Austria, our charitable institutions and the mission of the second Empire, seem to bear but very remotely, if at all, on the question of National Defence. His suggestions on the latter point occupy but a small portion of his 178 pages, and may be condensed into a much smaller portion of our own space.

Sir R. Gardiner agrees in the opinion expressed by Sir John Burgoyne, that "although fortifications, to a certain extent, would add greatly to the defensive capability of the country, they are less necessary than the men, arms, ammunition, and equipment." The same high authority has stated in his "Military Opinions," that a hundred thousand men, of whom half or two-thirds should be troops of the line, and the rest militia,—all of whom should be available for immediate action in the field, without stripping garrison-towns, seaports, stations, &c., of the numbers necessary for their protection,—might resist an invading army "with reasonable prospect of success." Sir R. Gardiner's estimate is less moderate. Assuming that "France would never think of invading England with less than 300,000 men," he proceeds:—

> The amount of force to contend with the main body of an invading army of this power ought not to be computed at less than 100,000 men, and 200 guns in the field.
>
> Our flanking corps, apart and distant from the main body, would be severely tried, and constantly engaged with chosen men of the invading army. On either flank, we should probably employ 25,000 men, which like our main body should be composed of regular troops, and permanently embodied militia.
>
> This would be employment for 150,000 men—besides which you would have to provide troops to meet or pursue corps moving in remote support of their main body—interrupting your communications—acting in diversion or possibly with real separate purpose of possessing ourselves of our large unfortified towns or commercial dockyards—to garrison the great national dockyards—to defend the Channel Islands—and finally, to provide for the defence of Ireland.

Our present army, "including 23,000 militia, amounts to 229,000 men," of whom, in addition to 90,000 in India, a very large number are serving in its colonies, and otherwise unavailable for action in the field at home. Sir R. Gardiner estimates that, "by withdrawing the body-guard of the Sovereign, and by leaving our arsenals inadequately and inefficiently defended, we might possibly concentrate and bring into the field a disciplined army of 50,000 men,—composed of regular troops and embodied militia." Of our present army, 9,000 men exist only on paper; and the difficulty of enlisting soldiers up to the number sanctioned by the votes of Parliament has been acknowledged by the present Secretary for War. The impossibility of enlisting men to the extent insisted on by Sir R. Gardiner is, therefore, evident. The remedy proposed by him is the establishment of the conscription. We believe this to be simply impracticable. The English Parliament would not vote it; the English people would not submit to it. Supposing, however, this preliminary objection removed, it is worth while considering what the effect of the conscription would be on the social condition of England. The unpopularity of compulsory service would require to be balanced by dangerous concessions to the soldiers on service. The army, greatly augmented in number, and at the same time separated more widely than ever from the mass of the Queen's subjects, would become a power in the State—a distinct order—needing to be petted and humoured, as in the various continental States. There is too much reason to fear that England would become a military nation, not merely prepared to defend herself against "the four quarters of the world in arms," but aggressive, eager for conquest, trophies, and *gloire*. Ambitious and unprincipled military leaders would have a powerful instrument put into their hands, enabling them at their choice to sway the public opinion, or to set it at nought. These dangers may seem chimerical. They are distant, no doubt, and, even under fostering circumstances, would only by slow and imperceptible degrees become imminent. But that a greatly enlarged home army, enrolled for permanent service by means of compulsory conscriptive ballot, would give occasion to them, is evident both of itself and from the experience of foreign nations. The dilemma is a serious one. After all precautions had been taken, by fortifications on the coast, and by the maintenance of a preponderant fleet in the Channel, the landing of a hostile force in England could not be reduced to an absolute impossibility. This being so, if it is necessary to strengthen our forces at all, it is necessary to strengthen them to an extent which shall be sufficient. Half measures, in such a case, are absurd. The conscription, or voluntary enlistment, is the alternative. The former, we believe, England will not tolerate. No practicable increase of bounty or pay will enable the latter to compete with the wages of labour, so as to attract men in any sufficient number to the service. It remains to be considered whether, by ameliorating the common soldiers' life in barracks, pursuing still further in this respect the reforms which the present War Minister has initiated,—by the abolition of degrading punishments, and, above all, by the gradual abandonment of the purchase system,—the attractions of the army, as a career, may not be greatly increased. Every one knows that a few prizes in a profession, a chance of rising to distinction, outweigh virtual certainty of more moderate success. The possibility, we will not say of the field-marshal's baton, but of the ensign's commission, would act as a powerful inducement on many minds. Reforms, such as those hinted at, would not only increase the numerical force, but elevate the character of the rank and file, whom Mr Sidney Herbert, with too much truth, recently described as recruited from a class to be kept in discipline only by the "cat." In the army, as in the navy, it must be remembered that the pressing want is *men*.

Though insisting chiefly on *this desideratum*, Sir R. Gardiner does not omit to dwell on the necessity of improved fortifications and equipments. An expenditure of 20 millions, he alleges, will not be sufficient for this purpose, while for the pay of a numerically adequate army and navy, an annual increase to the estimates of four millions is, he maintains, necessary.

The two other pamphlets named at the head of this paper may be passed over with slight notice. The former of them insists with some force on the desirability of improving the organisation of the militia. The latter proposes to render invasion impossible by "placing permanently along [the] open beaches, at the mouths of rivers, all round our great roadsteads, in front of all our sea-coast towns, and wherever insult might be given and defence is necessary, long 32-pounder guns, at a distance of thirty yards apart from each other, a little above high-water mark." This would give 60 guns in every mile, to be manned by crews of one captain and ten men to each gun,—the crews to consist of paid volunteers "from the town and villages on the coast and a few miles inland." Assuming that half the coast line of Great Britain would need defending, sixty thousand guns, involving an expense of 6,000,000*l*, would be required. The plan is little likely to be adopted; and it is unnecessary to discuss it. We doubt whether artillerymen, however, are to be manufactured, like the heathen god, out of any sort of wood. The highest authorities, on the contrary, assure us that constant training, and not simply the "little instruction" which is compatible with the pursuit of their ordinary employments, is indispensable to make gunners. In the event of an invasion, "Centurion's" proposal would, we fear, have the effect of supplying the enemy with cannon very cheaply.

In considering the defences of England, we have said nothing of the "Volunteer Movement" now in progress. Sir R. Gardiner scarcely holds it worthy of being taken into account. We may seize another opportunity of referring to it, in noticing the pamphlet on the subject published not very long since by Messrs Macmillan.

THE UNIVERSAL REVIEW. March. Wm. H. Allen and Co., 7 Leadenhall street.

THE DUBLIN UNIVERSITY MAGAZINE. March. Hurst and Blackett.

THE "Universal Review" for this month is scarcely of average merit. It has two political articles besides the usual review of the past Session, the first of which is an ineffectual complaint of the existing state of things both in Parliament and out. It bewails the indifference of a public "that, weary of the subject, desires as little alteration in the existing system as can be effected with decent consistency"; but it offers no better stimulus to an increased enthusiasm for reform than the rejected measures of Lord Derby's Bill, and no more solid prospect for the future than a renewed suggestion of a coalition between the Tories and the Whigs. "Commercial Treaties and Diplomatic Tariffs" is written with great vigour, and there is much truth in the objections it urges to commercial treaties at the present day, but they labour under the disadvantage of having already been fully considered and the question settled against them.

Among the subjects of a more general nature, the article upon "The Ulster Revivals" will be read with interest, and its readers, we think, will fully agree in the reviewer's condemnation of those false views of religion that conceive it to be honoured and promoted by fostering a blind and ignorant excitement, worked up till it becomes a physical disease.

In "Odd Days in Hyde Park," Dr Doran brings out some more of those stores of old-world anecdote and information that he collects with antiquarian zeal.

The article on "National Music" will prove attractive to those who have not met with Mr Chappell's elaborate work. It will be a pleasant surprise to many Englishmen to hear that their country is not behind Scotland or Ireland in musical taste; and that indeed these two nations have not disdained to adopt many of her airs, and place them among their own national music. We do not know what our Northern neighbours will say to Mr Chappell's reclamation (to make use of a Napoleonic word) of such airs as "Ye Banks and Braes o' bonny Doon," "John Anderson my Joe John," and "Gin a body meet a body," &c. This last appeared first in a London pantomime a little earlier than 1795, when it was changed, in some degree, to suit it for a place in the Scots Musical Museum.

This number of the "Dublin University Magazine" contains a number of pleasantly-written articles, but none calling for particular notice. The longest, and perhaps the most important, is a completion from a former number of the "Life and Times of Edmund Burke." It is a fairly impartial survey of his political career, but it does nothing towards clearing up those portions that have laid him open to the imputations of his enemies, and throws little fresh light upon the peculiarities of his genius.

The translations from Victor Hugo's "Legende des Siècles" are spirited and good; the criticisms by which they are accompanied, just.

Of the lighter literature, if we may so speak where all are light, the best is "The Season Ticket," here completed; it is full of shrewd sense and quaint humour. A well-written defence of Tennyson's poetry from the strictures of M. Montégut, a review of Mr Pycroft's "Twenty Years in the Church," and some other readable articles, make up a number of average interest and ability.

Foreign Correspondence

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

The French Government has lost no time in promulgating the Treaty of Commerce with England. The telegraph informed us, on Saturday last, that the Treaty had been adopted in the House of Commons in the preceding night; and on Sunday morning it was published in the official *Moniteur* in the usual form. Accompanying it was the additional article of the 25th February, increasing from 2d to 5d per gallon the surtax on brandies and spirits, mentioned in article 8. As far, then, as France is concerned, the Treaty and the additional article have now force of law.

A very long and most interesting report to the Emperor, signed by the two French negotiators of the Treaty, M. Baroche, President of the Council of State, and M. Rouher, Minister of Agriculture and Commerce, was published in the *Moniteur* at the same time as the convention. This report, which printed apart would make a good-sized volume, begins by mentioning the negotiations which took place in 1832, 1839, 1843, and 1852, between the French and English Governments for a treaty of commerce:—the said negotiations having been, as all the world knows, unsuccessful. Then it proceeds to notice the concessions which Great Britain makes to France:—1, as regards fancy articles, jewellery, silversmiths' work, millinery, gloves, artificial flowers, &c. &c.; 2, silk fabrics; 3, wines; 4, brandies and spirits: and it shows that those concessions cannot fail to increase largely the consumption of the said articles in Great Britain, and consequently be most advantageous to French producers, both masters and workmen. As regards wine in particular, it calculates that there will be a particularly great demand, inasmuch as at present the average consumption in England is not much more than 1 litre (the litre is 0.2201 parts of a gallon, or in round figures not quite 2 pints) per head per annum; whilst in France it is 100, in Portugal 100, in Spain 33, in Austria 57, and in Switzerland 56. It says, too, that the wine-producing power of France is sufficient to meet any demand which may be made from Great Britain. Next, the report proceeds in a very elaborate manner to contend from facts and figures that the concessions made to England, that is to say the abolition of prohibitions on certain articles and the substitution for them of *ad valorem* duties of 30 and 25 per cent., also the imposition of lower duties on iron and coal, need not occasion any fear to French manufacturers, ironmasters, and coalowners, as, all things considered, those people will be well able to bear them. With respect to prohibited articles, for example, the argument put forward is to the effect that by the abolition of import duties, cotton and wool will not be dearer in France than they are in England; that by the modifications of the duties on iron and machinery, the cost of constructing manufactories will be lessened in France; that the interest on capital tends in France to approach the level of that of England; that the reduction of the coal duties will reduce largely the cost of manufactures, as is proved by the fact that at present the making of a kilogramme (nearly 2¼ lbs) of spun cotton worth 3f, requires 6½c worth of coal; and, lastly, that labour is not only cheaper in France, but that the French workman, though less active, works with greater care than the English, and, moreover, does 72 hours' work a week instead of 60. On the subject of the coal duties, the report argues that the reduction in favour of English coal will only affect the coal-pits in the North of France; but that, from the increasing demand for coal, and from the facilities of transport they possess, those pits have nothing to fear from the competition. With regard to iron and steel, the report says that the English negotiators wanted to establish duties of 15 per cent *ad valorem*, but that as they appeared too small, duties of 30 and 25 per cent. were adopted. It argues that those duties will be sufficient, especially with the improved means of communication—roads, railways, and canals—promised to ironworks. Lastly, the report justifies the maintenance of the differential duties on shipping by the assertion that "the French mercantile navy ought not to be exposed prematurely to a competition which it is, perhaps, not able to sustain": it, however, hints that those duties may, "after a profound investigation," be modified. Such is a brief and imperfect analysis of the report on the Treaty. This document is certainly one of the most remarkable on the commercial legislation in France that has ever been published; and notwithstanding it bears the signatures of M. M. Baroche and Rouher, I fancy I perceive in it the "fine Roman hand" of the great French economist to whose indefatigable labours England and France are mainly indebted for the accomplishment of the important reforms it refers to.

In my last I announced to you that various bills of commercial importance had been submitted by the Government to the Council of State, but, unfortunately, from a delay in the mails, the letter did not reach you. The bills have since been presented to the Legislative Body. One of them is to authorise the Government to lend to manufacturers 40,000,000f (1,600,000*l*) for improving their machinery. Government loans to private persons for private purposes are certainly very objectionable; but in this case they will, at all events, have the advantage of preventing the poorer class of manufacturers from clamouring too loudly against the Treaty. Another bill proposes to do away with the prohibition to export bark for tanning. This is a concession to England. The sorts of bark which France produces are fir, elm, beech, birch, willow, oak, chestnut, &c. What quantity she produces annually I have no statistics to show; but, seeing that she possesses vast forests in different parts of the country, it must be considerable: the wonder, indeed, is, that a prohibition to export should ever have been considered necessary. Another bill regulates various matters relative to wool and cotton and other raw materials.

I also stated in my last that the Council of State was occupied in discussing the reductions to be effected in coffee and sugar. The bill drawn up by the Council provides that they shall come into effect from the 15th April next, and shall be as follow:—

SUGAR.	The 100 kilogs (nearly 2 cwts).
Of the first type:—Native (beetroot)	25f*
By French vessels—French colonial	25f
From places out of Europe	28f
From entrepots	34f
By foreign vessels	39f

Above the first type:—Same duties as above augmented by 2f the 100 kilogs.
Refined:—Native and colonial, 10 per cent. added to the duties imposed on sugar above the first type. Drawback to be allowed on refined sugar exported.
Molasses, from French colonies, 7f the 100 kilogs.
* 25f=1*l*

COFFEE.	The 100 kilogs.
By French vessels—From French colonies	30f
From French establishments on W. coast of Africa	35f
From other places out of Europe	42f
From entrepots	50f
By foreign vessels	55f

The bill also proposes to reduce, from the same date, the duties on cocoa as follows:—By French vessels: from French colonies, 20f the 100 kilogs; from other countries out of Europe, 25f; from entrepots, 35f: by foreign vessels, from all places, 40f: likewise those on tea to 75f and 90f by French vessels, and to 100f by foreign vessels.

The proposed reductions are very important: the present duties on sugar being from 39f to 63f by French vessels, and from 65f to 68f by foreign; on coffee from 50f to 100f by French vessels, 105f by foreign; on cocoa, 40f to 65f French, 75f foreign; on tea, 150f to 500f French, 600f foreign. These duties, and also the aforesaid new ones, do not comprise the *decimes*.

As stated in the English Parliament, the French Government has likewise consented to abolish the export duty on rags. This has drawn forth loud complaints from the paper-makers, and it will doubtless render rags dearer. But doubts may be entertained that France can become a great exporting country. Her present annual production is only about 60,000 tons, the price of which is from about 7*l* 4s to 20*l* English per ton; and it is to be remembered that she is very diligent in collecting her rags; in fact, the *chiffonniers* (rag gatherers) of all her large towns are so numerous as to form a not unimportant part of the community. Her exports are insignificant, and she has no markets to go to, except those already possessed by the English and Americans. It is true that the pending tariff reforms may render her consumption of cotton and linen goods larger than it is; but that circumstance can hardly, I should imagine have,—at all events for some time to come,—a perceptible effect in the production of rags.

M. Greterin, who has been for many years Director-General of the Board of Customs, has resigned, and been made a Senator. M. Forcade de la Roquette, Director-General of Forests, has been named his successor. Though he is both able and zealous, the retirement of M. Greterin at this moment is desirable, as he is of Protectionist principles. M. Forcade de la Roquette is a member of the Council-General of the Gironde, one which has always been noted for its liberal commercial opinions; and as M. Forcade is of the same way of thinking, he will of course do all he can to promote the success of the important reforms undertaken by the Government.

I read in the newspaper that the Minister of the Colonies has been obliged to address a letter to the Chamber of Commerce of Nantes, to represent that great inconvenience has been occasioned in the island of Guadeloupe by the want of vessels to bring away the sugar and other produce ready to be shipped. A more striking example of the folly and injustice of maintaining in the Customs tariffs exclusive privileges to French shipping could not well be afforded.

The Board of Directors of the Orleans Railway announce that, in the general annual meeting of shareholders to be held on the 30th of this month, they will propose a dividend of 97f for 1859.

The large decline in the amount of discounts made by the Bank of France for the month ending the 8th March, as compared with the preceding month (upwards of 1,120,000*l* sterling), has been the subject of much painful remark, as showing the stagnation of trade and the uncertainty which hangs over the future. The amount of discounts effected was in round figures 488,500,000f; but, though small, it was 35,000,000f more than those of January, 13,000,000f more than those of October of last year, 48,000,000f than those of September, 25,000,000f than of August, 44,000,000f than of April, and 46,000,000f than of March, 1859.

The Chamber of Commerce of Lyons has given its high sanction to a project which has been more than once talked of,—the establishment of a Bank as a medium for the monetary transactions between France and the extreme East. This project, however, has not yet assumed any definite shape. According to a rough calculation, the commercial operations between France and India, China, and other parts of Asia, exceed 2,000,000*l* sterling a year. The French have long been annoyed at the idea that the aid of English banks is exclusively employed in these operations;—and the prospect of increased trade with China which the war opens out, and with India which commercial reforms cause to be anticipated, make them more anxious than ever to be emancipated from English hands. In addition to a bank, the Chamber of Commerce of Lyons recommends the establishment of direct lines of steam navigation between France, and China, and India; and, as France draws 30,000 bales of silk yearly from those countries, saying nothing of other articles, and nothing of what she sends there, the Chamber thinks that the enterprise could not fail to be profitable. This, also, is a project which has been more than once on the *tapis*.

The Bourse has been very dull during the whole of the past week, and the following are the quotations:—

	Thursday, March 8.	Thursday, March 15.

I notice that some of your contemporaries, notwithstanding the explanations that have been given, fall into the error of supposing that the Commercial Treaty with England will require to be sanctioned by the Legislative Corps and the Senate of this country, as well as by the British Parliament. It may be well, therefore, to state once again, that as soon as the Treaty shall be sanctioned by the Parliament, the Emperor will, in virtue of the powers he conferred on himself in his Constitution, promulgate it, and it will then have the full force of law. The Legislative Corps and the Senate will not be able to alter a word in the treaty,—will, in fact, have nothing to do with it. But, nevertheless, these bodies, in which the Protectionist and Prohibitionist influence predominates, will, it appears, make the convention the subject of attack on the Government. They will, in fact, I believe, maintain that it is illegal, or at all events irregular, inasmuch as an Imperial decree, issued shortly after the promulgation of the Constitution, established a sort of Commission, consisting of high functionaries, manufacturers, and others, to express its opinion on the reforms and treaties which might become necessary; but this objection is of no value, inasmuch as the very decree says expressly that the said Commission should only deliberate on questions "submitted to it by the Government."

It is considered certain that the Bank of France will, as it did last year, make the railway companies the advances they require for the continuation of their works, and will repay itself by disposing of the bonds of the companies; but it is said that, though the advances may begin to be made forthwith, the sale of the bonds is not to commence until the second half of the year. The Bank has, it appears, increased from ¼ to ½ per cent. the commission for paying dividends for the railway companies in its branches.

M. Mires, the well-known speculator, has published a letter in the newspapers, in which he expresses the opinion that, in order to revive enterprise in France, which has been greatly discouraged by recent events, great bankers and capitalists who get up companies ought to "give something else than their usual guarantee to the public whom they invite to subscribe for shares"—ought, in fact, to "secure shareholders against the loss of their capital," and even to guarantee them "a minimum of interest thereon." If the great bankers and speculators would undertake any such obligation, the public would offer no objection; but it is hardly likely that those gentlemen will do anything of the kind, and the wonder is that a man like M. Mires should have put his name to so silly a proposition. How, indeed, could even the very greatest capitalists of the day guarantee the capital of enterprises which in the aggregate would amount to scores of millions of pounds sterling?

The following is the weekly account of the markets:—

FLOUR.—At *Paris*, during the past week, business has not been active, and there has been little change in prices. Yesterday, quotations were 57f to 57f 50c the sack of 159 kilogrammes for superior qualities; 54f to 56f for good sorts; 52f to 53f ordinary. In four marks, transactions yesterday were rather active, but at a small fall in prices. The current month was done at 55f 75c; April, 56f and 56f 25c; April and May, 57f.

WHEAT.—Business was dull at *Paris* yesterday: choice was quoted at 32f to 32f 50c the sack of 120 kilogs; good, 31f to 31f 50c; ordinary, 30f to 30f 50c. Of the provincial markets, 47 present a decline of from 8c to 1f the hectolitre, 29 a rise of from 17c to 1f 50c, and in 63 there has been no change.

COTTON.—Business at *Havre*, in the week ending Friday, was dull, the sales having only been 3,121 bales. Prices fell from 1f to 3f the 50 kilogs, the closing quotations of low New Orleans being 98f, and very ordinary ditto 105f. The arrivals were 7,294 bales. This week a certain degree of animation has prevailed, and yesterday low New Orleans was 98f and 98f 50c.

COFFEE.—At *Havre*, in the week ending Friday, 1,400 sacks Hayti disposable were sold at 73f to 74f 50c the 50 kilogs in bond; 2,400 sacks ditto for delivery at 73f to 73f 50c; 573 sacks Rio washed, disposable 80f 50c to 82f 50c; 28 sacks 79f; and 300 Ceylon triage expected, 129f, duty paid. The arrivals were nearly 14,000 sacks. This week sales have been very active: Porto Cabello, 86f in bond; Rio, 73f 50c to 76f; Port-au-Prince, 75f 50c to 79f; Cape (Hayti), 76f to 80f; Santos, 73f to 80f; Gonaïves, 78f to 80f; Bahia, 67f 50c; Rio washed, 82f; Manilla, 131f duty paid. At *Bordeaux*, last week, only a few small lots were sold at prices presenting little variation from those previously established. No sales have been made this week. At *Nantes*, last week, a very small lot of Reunion and one of India were the only sales, and this week there have been no transactions. At *Marseilles*, last week, the sole transaction recorded was 400 sacks Rio at 77f 50c the 50 kilogs in bond.

SUGAR.—The sales at *Havre*, in the week ending Friday, were active; namely, 1,500 hogsheads French West India went at 58f 50c to 62f the

50 kilogs duty paid; 4,100 bales Reunion at 61f; 1,300 casks Havana, 36f in bond. The arrivals were upwards of 600 hogsheads, and nearly 900 casks. This week the sales have not been extensive; French West Indies at 60f 50c to 62f duty paid; Mauritius, 65f 50c; Havana, 37f. At *Bordeaux*, last week, 100 casks French West India were sold at 58f to 58f 50c the 50 kilogs; 6,500 bales Reunion at 61f to 61f 50c. Havana and Mauritius were not demanded, but the former was nominally 68f to 69f, and the latter 71f to 73f. This week nothing has been done. At *Nantes*, last week, sales were insignificant, and quotations were nominally: Reunion, 60f; Mauritius, 61f; Guadeloupe, 59f; Havana, 36f. This week some large lots of Reunion have been sold at 61f 50c to 66f 50c. At *Marseilles*, last week, the sole sales were of some lots of damaged Brazil and Havana.

INDIGO.—At *Havre*, last week, the sole sale was 4 cases Bengal at 10f 76½c the half-kilog duty paid. There were no arrivals. This week, 5 cases of Bengal have been sold, but prices are not stated. At *Bordeaux*, last week, 8 cases Bengal and 21 Kurpah were sold, but the prices are not stated. This week, a small lot of Bengal and another of Kurpah have been sold, but prices are not given.

WOOL.—At *Havre*, in the week ending Friday, 31 bales Buenos Ayres unwashed were sold at 1f 10c to 2f 62½c the kilog in bond; 14 bales Mexico unwashed and washed, 2f 17½c; 20 Peru unwashed, 2f 20c; 9 bales sheepskins La Plata unwashed, 1f 10c to 1f 60c. The arrivals were 68 bales. The sole sale this week has been a small lot of Buenos Ayres unwashed at 1f 90c to 2f 35c in bond.

BRUSSELS, March 15.

A bill of considerable importance has been presented to the Chambers by the Government. It proposes to abolish entirely the octroi (town) dues, and to replace them by a per centage on the Post Office revenue, on the import duty on coffee, and on the Excise duties on beer, vinegar, native sugar, and native brandy. The advantages of the bill would be to cheapen food and other articles of general consumption in towns, and to get rid of a vexatious, barbarous, and expensive system of taxation; but the inconvenience would be to give the Government a marked influence in municipal affairs, and to render local improvement less easy of accomplishment.

COMMERCIAL AND MISCELLANEOUS NEWS.

The following telegram has been received from India:—Mr. Wilson made his financial statement on the 18th of February. The deficit is about nine millions. He proposes a trade licence of from 2s to 20s yearly; a tax upon incomes of from 240 to 600 at 2 per cent., and above that at 4 per cent., with no exemptions; a large duty upon tobacco; the tariff is to be modified. There will be no loan. The produce markets at Calcutta were heavy—money was tight—and the rates of discount ruled high. The 5½ per Cent. loan was quoted at 98.6; the 5 per Cent., 95; and the 4 per Cent., 78.

The *Moniteur* has published the following monthly debtor and creditor account of the Bank of France, made up to Thursday se'nnight. The corresponding figures of last month and of the previous year are added:—

The import duties in France upon zinc and dyewoods have been modified as follows:—Zinc, of the first melting, in mass, whether in pigs, bars, or plates, imported by land, to pay the same duties as if imported in French vessels. Dyewoods, in logs, not specified, from entrepôt in French vessels, to pay 3 francs (2s 6d) per 100 kilos (220 lbs).

According to a circular of Messrs Arles, Dufour, and Co, of Lyons, transactions in the silk market during the past month have been checked by the uncertainty with regard to the result of the discussion on the commercial treaty in the English Parliament. The unsatisfactory advices from the United States have also contributed to create dulness in the French as well as in all other continental silk markets. The average decline in prices during the month has been limited, however, to between 2 and 3 per cent., the comparative smallness of stocks preventing any serious depreciation.

DELIVERIES of SILK through the LYONS CONDITION HOUSE.

	bales.	kilogs.
From January 1 to 31, 1859	2,640	220,000
From January 1 to 31, 1860	2,600	186,000
From February 1 to 28, 1859	2,865	223,000
From February 1 to 29, 1860	2,345	186,800

The commercial accounts from New York describe great inactivity in business. The supply of money, therefore, was abundant at 6 per cent., and the rate of exchange on England was dull at 109. Hence there is no prospect for the present of any considerable specie shipments to this country.

The Lords of the Committee of Privy Council for Trade and Plantations have received a copy of a despatch from Her Majesty's Minister at Naples, enclosing a translation of two Neapolitan Royal Decrees, the first of which authorises the admission, free of duty, throughout the Neapolitan dominions, of colza, lesame, navette, and camelina oile, until the 31st December next; and the second fixes, as follows, the export duties upon olive oil:—Olive oil, exported from the continental ports of the Two Sicilies—In national vessels, 4 ducats (13s 3d), per cantar (196½ lbs); in foreign vessels, 6 ducats (19s 10½d), per cantar. From the Island of Sicily—In national vessels, 2 ducats (6s 7½d) per cantar; in foreign vessels, 3 ducats (9s 11¼d) per cantar.

The commercial advices from the West Indies state that a good crop of sugar is pretty generally expected. Labour, however, is very scarce.

The total quantity of coal and coke exported from Great Britain during the month of February was, of coal 328,715 tons and of coke 15,980 tons. Of this quantity Newcastle exported 68,923 tons of coal and 8,935 tons of coke; Shields, 7,371 tons of coal and 408 tons of coke; Sunderland, 31,793 tons of coal and 2,632 tons of coke; Hartlepool and West Hartlepool, 12,726 tons of coal and 1,233 tons of coke; Hull, 6,678 tons of coal; Liverpool, 46,755 tons of coal and 594 tons of coke; Cardiff, 84,013 tons of coal and 1,268 tons of coke; Swansea, 18,476 tons of coal and 324 tons of coke; Newport, 13,636 tons of coal and 381 tons of coke; Glasgow, 3,807 tons of coal and 205 tons of coke; and Troon, 6,496 tons of coal. The quantity of coal and coke shipped during the past month from the different coal ports to London and other places in Great Britain was 733,238 tons of coal, and 7,739 tons of coke. Of this, Newcastle shipped 168,557 tons of coal and 1,392 tons of coke; Sunderland, 149,921 tons of coal and 100 tons of coke; Seaham, 36,292 tons of coal; Hartlepool and West Hartlepool, 114,586 tons of coal and 34 tons of coke; Cardiff, 65,516 tons of coal and 1,071 tons of coke; Newport, 51,073 tons of coal and 281 tons of coke; Troon, 13,657 tons of coal; Maryport, 26,765 tons of coal and 106 tons of coke; and Whitehaven, 15,728 tons of coal and 7 tons of coke. During the month there were engaged in the oversea coal trade 1,092 vessels; of this number, 591 were British, 82 Danish, and 117 French ships.

The following return shows the coal produce of the United Kingdom in 1858:—

	Tons.
Durham and Northumberland	15,853,484
Cumberland	920,137
Yorkshire	8,302,150
Derbyshire, Nottinghamshire, and Leicestershire	4,710,750
Warwickshire	356,500
Staffordshire	6,680,780
Lancashire	8,050,000
Cheshire	695,450
Shropshire	749,360
Gloucestershire, Somersetshire, and Devonshire	1,125,250
North Wales	1,022,300
South Wales	7,495,289
Scotland	8,926,249
Ireland	120,750
Total produce of the United Kingdom in 1858	65,008,649

PRODUCTION and CONSUMPTION of COAL in FRANCE during 1847 and 1858.

1847.	Metrical tons.
1st.—French production	5,153,200
2nd.—Imports from Belgium 1,634,900	
— — England 504,200	
— — Prussia 254,400	
— — Others 1,500	
3rd.—Consumption in the Marine 77,500	2,472,500
4th.—Total consumption	7,625,700

In 1847 the imports were, in comparison to the production, as 48 to 100.

1858.	Metrical tons.
1st.—French production	7,340,000
2nd.—Imports from Belgium 3,689,400	
— — England 1,146,800	
— — Prussia 1,027,800	
— — Others 3,400	
3rd.—Consumption in the Marine 165,000	5,432,400
4th.—Total consumption	12,772,400

In 1858 the imports were, in comparison with the production, as 74 to 100. During the period from 1847 to 1858, the increase was:—

In production	42½ per cent.
In imports	120 per cent.

In this table coke is included, reckoning two of coal to one of coke. The ton, the measurement used, is the French ton of 1,000 kilogs. The English ton is equal to 1,016 kilogs.

G. R.—The duty was reduced to ten per cent. ad valorem.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

An Account, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 14th day of March, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,049,615	Government Debt	11,015 100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,574,615
		Silver Bullion	...
	29,049,615		29,049,615

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities(including Dead Weight Annuity)	10,221,190
Rest	3,732,233	Other Securities	21,816,351
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	9 271,338	Notes	6,643,610
		Gold and Silver Coin	725,265
Other Deposits	13,030,840		
Seven Day and other Bills	719,005		
	41,306,416		41,306,416

Dated the 15th March, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,225,010	Securities	31,959,541
Public Deposits	9,271,338	Coin and Bullion	15,299,880
Private Deposits	13,030,840		
	43,527,188		47,259,421

The balance of Assets above Liabilities being 3,732,233*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£141,797
An INCREASE of Public Deposits of	929,973
An INCREASE of Other Deposits of	194,229
An INCREASE of Government Securities of	50,000
An INCREASE of Other Securities of	862,454
An INCREASE of Bullion of	79,687
An INCREASE of Rest of	9,736
An INCREASE of Reserve of	243,037

The great increase in the private securities attests the activity of the commercial demand for money, the cause of which is to be found in the heavy addition to the Treasury balance. The "reserve," however, has somewhat increased, and so have the coin and bullion.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
	£	£	£	£	£
Circulation, including bank post bills	20,060,433	9,217,732	20 089,933	21,096,253	21,225,010

Price of Consols	96¼	93⅝	96⅞	96	94⅞
Average price of wheat	38s 1d	55s 6d	45s 3d	40s 3d	45s 0d
Exchange on Paris (shrt)	25 50	25 25	25 5 12½	25 7½ 12½	25 7½ 12½
— Amsterdam ditto	12 1	11 15 15½	11 14 15	11 15 15½	11 13 14
— Hamburg (3months)	13 13	13 8	13 6	13 5½ 6	13 4½ 5

At the corresponding period of the year 1850, the mediation of France had been offered in the dispute between England and Greece. At Paris, amid great popular excitement, three Socialist candidates had been returned for the Departments of the Seine, whereupon the French 5 per Cents. fell from 94 to 90. In the House of Commons a great effort was being made by Mr Cobden and others to cut down the national expenditure. The budget just presented estimated the total income at 52,285,000*l*, and the expenditure at 50,402,000*l*. Of the estimated surplus of 1,500,000*l*, one-half was to be applied to the remission of taxes, and the other half to the reduction of the National Debt.

In 1857, the general election was at hand. Money was tight, and the April dividends had been already, to a great extent, discounted. Gold was being largely absorbed by the Continent, some of the latest remittances being designed to enable the Paris Credit Mobilier Society to pay the Austrian Government for the concession of the "Austrian Railways." A project for the establishment of a great International Anglo-French Bank—a project which, though repeatedly broached, has never yet been realised—was under active discussion. An extraordinary rise had taken place in the value of money in India.

In 1858, Mr Disraeli had announced that the English and French Governments had come to an understanding upon the foreign refugee question. An Indian loan of eight millions was about to be issued. Owing to the rapid increase in the Bank's resources, there was an impression that the rate of discount would be reduced from 3 to 2½ per cent., but it was not realised until some months afterwards. The Bank had just notified that in future they would not discount bills for the discount establishments.

In 1859, attention was directed to the provocations to war which continued to issue from Austria and Sardinia. It was generally believed that Lord Cowley's mission to Vienna had proved perfectly unsuccessful. The East Indian Railway Company had announced a loan of 1,000,000*l* in 4½ per cent. debentures, the whole of which were taken up in a few hours, and immediately quoted at 2 per cent. premium. In India extreme financial distrust prevailed. The Bank rate of discount at Bombay was 13 per cent.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,061,435*l*; in 1857, a deficiency of 9,776,286*l*; in 1858, a deficiency of 2,791,814*l*; and in 1859, a deficiency of 3,062,347*l*. In 1860, the deficiency is 8,785,511*l*. This denotes that the public depend largely at present upon the Bank for accommodation.

The money market is tight. The supply in all quarters appears to be scanty. To-day, more especially, the bankers were inquiring eagerly for money. The best paper cannot be discounted in the open market below 4 per cent., and in many quarters 4¼ is asked. At the Bank, consequently, the applications throughout the week have been active. To-day they were even more numerous than of late. The condition of the market presents nothing unnatural or calculated to excite surprise. The pressure arises mainly from the flow of money into the Bank on revenue account, as usual at this period of the quarter, combined with the activity of trade. From the Bank these funds cannot be drawn back into circulation unless by paying 4 per cent. There is every probability of a continuance of the present stringency until the April dividends are paid. The money dealers, however, can have no motive to aggravate the pressure, because if they are pushed for money the Bank of England are ready to make them the advances usual at this period of the quarter.

The only important arrivals of specie announced this week have consisted of 123,000*l* from Australia. This afternoon, however, intelligence was received of the arrival of the Shannon at Southampton from the West Indies, with about 89,000*l* in specie. It will be noticed that the supplies are still far below the average.

Yesterday, 14,000*l* in gold was withdrawn from the Bank for exportation. No withdrawal took place to-day.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—During the past week the market for gold has been exceedingly quiet, without any withdrawals from the Bank, the slight demand for export having been met by the arrivals. The Kangaroo brought 20,000*l* from New York, and the Armenian 11,500*l* from the West Coast of Africa. The Commodore Perry has at last arrived from Melbourne, with 58,000*l*, and the whole of these sums have been sent abroad. We look now for more arrivals from Australia, the passages of the eight ships now on the way averaging from 65 to 106 days. The Magdalena has taken 50,850*l* in gold to the Brazils, chiefly in sovereigns.

Silver.—Although but little has been doing in silver during the week, we quote the price firm at 62½d per oz standard. A larger amount of business was expected; but, owing to the late arrival of the mail at Marseilles, the letters will not be deliverable in London until Saturday, and there will then be but little time to execute any orders that may come to hand. The Magdalena has taken 8 500*l* in silver to the Brazils; and the Tagus has brought 4,154*l* from the Peninsula. Some large sums have also come to hand from the Continent.

Mexican Dollars.—The market is quite bare of dollars, and a slight advance has taken place; and we now quote the price as 62¾d per oz.

Exchange on Bombay and Calcutta, for 60 days' Bank bills, remains without alteration, 2s 0¼d to 2s 0⅜d. Rupee Loan interest bills have been selling at 2s 0¼d to 2s 0⅜d, at sight. Madras, 2s to 2s 0⅛d, 60 days sight. Bills with documents, 1s 11⅞d.

India Government Loan Notes continue at our quotations of last week, some considerable amounts having changed hands during the interval.

For the moment the market is quiet, operators waiting the next news from India. Prices to-day are for 5 per Cents., 99⅜ to ½; and for 5½ per Cents., 105⅝ to ¾.

The Continental exchanges have scarcely varied from last week's rates.

The official notification fixing the day for the reception of tenders for a new issue of 3,000,000*l* of Victoria Government 6 per Cent. Bonds is expected to be published by the Committee representing the six associated Australian banks in about a fortnight.

It is believed that the Committee of Bankers will on Monday next decide upon closing business on Saturdays at three o'clock, instead of four, as hitherto, a recommendation to this effect having emanated from the joint stock banks who have been consulted in the matter. The banking *employés* were in hopes that two o'clock would have been fixed. In their disappointment the persons engaged in other trades will share, for there is no doubt that an earlier termination of the week's business on the part of the banks would give a great stimulus to the Saturday half-holiday movement in all quarters.

The remarkable feat of reducing to six days the period required for communicating between this country and Calcutta has been accomplished. The first private telegram between India and England, viâ the Red Sea, was received at Lloyd's to-day, dated Calcutta, the 10th of March. It reports as follows:—"Ship Red Gauntlet, bound to London, burnt and scuttled. Some cargo will be saved."

Advices received in the City by this day's packet from La Guayra (Venezuela), dated the 24th ult., state that "on the 17th and 18th inst., the Government forces utterly routed the revolutionary army under Falcon, Sotilli, &c., capturing many prisoners, and dispersing the enemy—the fugitives being actively followed up by the Government troops."

At the Half-Yearly Dividend Court of Proprietors of the Bank of England, held yesterday, it was announced that the net profits for the half-year ending the 29th of February amounted to 646,737*l*, making the amount of the "Rest" at that date 3,680,876*l*. A half-yearly dividend of 4½ per cent. was declared, without reduction on account of income tax, leaving the "Rest" at 3,025,991*l*. A proprietor, in seconding the motion for the declaration of the proposed dividend, having intimated an objection to the rule now enforced by the Bank, by which the discount establishments are excluded (unless at the usual quarterly periods), the Governor explained that the measure had not been adopted without mature deliberation, but that "if it were thought that its continuance would be adverse to the interest of the commercial community it would be re-considered, and, if found expedient, rescinded." A cordial vote of thanks was passed to the Directors.

The capital of the London and Provincial Marine Insurance Company has been fully subscribed for. The subscription list for London was closed yesterday. That for the country will be closed to-morrow (Saturday).

The whole of the 100,000*l* of Preference capital just offered by the Great Ship Company has been taken up by the present proprietors. The list was closed this day.

The latest prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 3¼ to 3½ prem.; Universal Marine Insurance, ⅞ to 1 prem.; London and Provincial Marine Insurance, 5-16 to 7-16 prem.; San Paulo (Brazilian) Railway, ⅜ to ¼ dis.; Bank of Turkey, 1⅛ to 1⅜ dis.; City of London Brewery Preference shares, ⅝ to ¾ prem.; Buenos Ayres and San Fernando Railway, 1 to 1⅛ prem.; Folkestone West Cliff Hotel Company, ⅛ to ¼ prem.; and Anglo-Luso-Brazilian Steam, ⅛ to ¼ prem.

At Paris, to-day (Friday), the 3 per Cent. Rentes closed at 68.05 for money, and 68 for the account, being almost exactly the same as yesterday, and ¼ per cent. higher than on last Friday. The Savoy and Italian questions continue to be watched with anxiety, but a favourable impression has been produced by the unanimity of the population of Central Italy, as strikingly shown in the vote just solemnly recorded.

The English funds have partially recovered from the late decline. Yesterday morning Consols touched 95 to ⅛ for the 11th of April. To-day a relapse occurred, the closing prices being 94½ to ⅝ for money, and 94¾ to ⅞ for the account, or only about ⅛ per cent. higher than on last Friday. The reaction was caused by news that the representative of Switzerland at Paris had protested against the annexation of Savoy to France. Previously to this, the very adverse feeling occasioned by the development of the Emperor Napoleon's territorial designs was subsiding—a result to which the bold character of the discussions in the British Parliament seems to have contributed. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

The market for British railway stocks has exhibited renewed and extreme buoyancy. The settlement, which was completed this day, fully confirms all that has been said respecting the eagerness of the public to invest in these securities. The purchases are of the best class, and the supply of some kinds of stock in the hands of the dealers is completely exhausted. The rise amounts to no less than 3 per cent. (or equal to the dividend just declared) in South-Eastern stock, which continues in chief favour; 2½ per cent. in Great Northern; 2 per cent. in Berwick, Midland, and Lancashire and Yorkshire; 1½ per cent. in Great Western and York and North Midland; 1¼ per cent. in London and South-Western; 1 per cent. in London and North-Western; ½ per cent. in Caledonian and Eastern Counties, &c. The market closed this afternoon with firmness. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

COMPARATIVE EXCHANGES.

The quotation or gold at Paris is about ½ per mille discount, and the short exchange on London is 25.10 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is about 2-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 109 per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for chargea of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Only a limited supply of English wheat was on show at Mark lane, to-day, and for all kinds the demand ruled somewhat active, at fully Monday's quotations. Foreign wheat was steady, on former terms. Barley commanded extreme rates; but malt sold slowly. Oats, beans, peas, and flour changed hands steadily, at very full prices. This week's imports from abroad are again limited, viz, 2,280 quarters of wheat; 590 barley; 2,980 oats; and 150 sacks of flour. Letters at hand from most parts of the country state that the wheat crop is very backward, and that very little Lent corn has as yet been sown.

At Liverpool, this morning, a fair average business was doing in produce generally, at very full prices. Letters from New York to the 3rd inst. state that wheat was in request, at an advance of 3 cents per bushel.

There has been an improved demand this week in the Liverpool cotton market, resulting in total sales of 61,000 bales, of which spinners have taken 44,500 bales, speculators 3,500 bales, and exporters 13,000 bales. In quotations no change since Friday last. At the commencement of the week the market was depressed and languid, with a tendency to a further decline. In consequence, however, of more favourable news for cotton holders having been received from America in the last few days, they have been less disposed to make sales, and the market has become very steady, with daily increased transactions. To-day, the market closes steady and firm, with sales, 8,000 bales.

"The crop of cotton," observes Messrs Neill and Co., of New York, "is confirming the most sanguine expectations as to its ultimate result. The course of receipts has been the surprise of every one, and is now watched with increasing interest as determining the value of the views hitherto put forth. The adoption of higher figures recently has been universal. It is now the exception to find an impartial opinion below 4,300,000, while many advocate much higher figures, and the most popular estimates are about 4,400,000 bales. Our own opinion that the result will fall between 44 and 4,500,000 appears likely to be realised. The excess in receipts over last year is raised by mail dates to 572,000 bales, and judging by the telegrams at hand, it will next week exceed 600,000 bales. This excess alone, should it be increased no further, would give a total of 4,450,000 bales; but it can scarcely be expected to stop at these figures, looking at the comparatively small deliveries subsequent to this period last year, and the present liberal deliveries at all ports. On the contrary, it seems almost certain to run considerably beyond it, and in this view our outside figure appears moderate enough. This estimate is also strengthened by advices from intelligent correspondents at various points South, stating that nearly one-fourth of the crop yet remains on the plantations (including the stock in interior towns). Thus, if we add one-third of the receipts so far to the total in to-day's tables, the result will exceed four and a half millions. Some margin, however, must be allowed for detentions in various parts of country; though navigation at the present time is everywhere reported excellent. We are also glad to learn that the *quality* of the remainder of the crop is not so deficient as has been represented, it being generally considered equal, or superior, to that remaining at this time last year."

In a supplemental report, forwarded by Messrs Neill and Co., and dated the 3rd inst., the annexed important particulars are furnished:—"To-day we have despatches from New Orleans, Mobile, Savannah, and Charleston, quoting the week's receipts, up to last evening, as follows:—At New Orleans, 76,000 bales, against 42,000 last year; at Mobile, 16,000 bales, against 16,000 last year; at Savannah, 13,000 bales, against 11,000; and at Charleston, 16,000 bales, against 9,000. Thus, without taking the minor ports into account, from which no telegrams are received, we have for the week 121,000 bales, against 78,000 bales last year, raising the aggregate to 3,677,000 bales, against 3,032,000 last year, an excess of 645,000 bales. The range of middling at New Orleans is from 10¾c to 11c, according to staple and strictness of classification, and our Mobile quotation was 10½c at the close of business yesterday. Prices are fairly supported in consequence of the continued strong accounts from Liverpool and Manchester."

Our Bombay correspondent, writing on the 11th ult., states that owing to the high freights very little business was doing in cotton, and that most of the shipments were on account of native merchants.

The transactions in the tea market have been much restricted, but without leading to any quotable change in price. A telegram from Shanghai to the 22nd January, states that very little business was passing in tea. At Foo-chow-Foo, prices were 1 to 2 taels lower, with trifling settlements.

We have to notice an improved feeling in the demand for all raw sugar, and, in most instances, the quotations have advanced 6d per cwt, owing to a rumour afloat that the duties in France are about to be reduced 50 per cent. in the course of next month. Refined sugars have moved off steadily, and prices have had an upward tendency.

We have advices from the Mauritius to the 7th ult. The weather was remarkably fine for sugar making, and the crop of 1859-60 was estimated at 220,000,000 lbs. Annexed is a comparative statement of the shipments of sugar from the beginning of each crop to the 1st February of each year:—

The coffee trade has continued firm at extreme rates, although somewhat increased supplies have been on offer. Cocoa has realised fully the late improvement in value.

The upward movement in the currencies of wheat has produced more inquiry for rice, in which a steady business has been passing at extreme rates.

Since the reduction in the duties, the clearances of fruit have been heavy. This week, however, dealers have operated cautiously on former terms.

Saltpetre has been active, arising from an increased export duty in India, and prices have advanced.

Hemp has sold slowly, nevertheless the quotations have been supported. Flax has continued inactive. The public sales of colonial wool—which will terminate on Tuesday next—have been well attended by home buyers, and the whole of the parcels offered have changed hands at full quotations. Letters from Melbourne to the 14th January state that large quantities of wool were coming forward, and that sales had taken place as follows:—Superior clips, 1s 10d to 2s; fair to good, 1s 8d to 1s 9½d; low to middling, 1s 4d to 1s 7d; grease, 10d to 1s 1d; locks, pieces, broken wool, &c., 8d to 1s 1d; handwashed, 1s 6d to 1s 9d; scoured, 1s 9d to 2s per lb.

The silk market is by no means active at late quotations. The shipments from China to the 30th January were 46,000 bales.

We have very little change to notice in the value of either rum or brandy. For the most part the transactions have continued limited.

Scotch pig iron has sold heavily, and the price has declined to 58s 6d. Copper has fallen 5*l* per ton, and most other metals have ruled inactive.

The leading quotation for linseed oil, on the spot, is 28*l*. Olive is rather cheaper, and other qualities have moved off slowly.

The tallow market has ruled heavy on lower terms. To-day, P.Y.C., on the spot, has changed hands at 58s per cwt. Town tallow is 57s net cash.

The market continues somewhat depressed, and transactions have been at prices favouring the purchaser to the extent of ⅛c per lb on some grades, and we adjust our quotations. The sales for the three days comprise 5,000 bales, mostly on the spot, the market closing quietly. We quote:—

The cotton market has been greatly depressed in tone during the past week. The late heavy arrivals have been freely offered. In the middling and lower middling qualities of American a decline of 1-16d per lb has been conceded, and in good ordinary even more. At the reduced rates a considerable amount of business has been induced, especially for export. Egyptian have been in fair demand, but the supply of the better qualities is more abundant. Brazil are firm in price. East India have been in steady demand at recent rates. The sales to-day are 8,000 bales. The market quiet. The reported export amounts to 12,910 bales, consisting of 7,200 American, 630 Brazil, and 5,080 East India.

MARKETS IN THE MANUFACTURING DISTRICTS

The commercial advices from India being considered unfavourable, the inquiry for goods in the manufacturing districts for shipment to the East has been somewhat heavy this week. In prices, however, very little change has taken place. On continental account the demand has not improved; but, for home use, a full average business has been passing. For the time of year, owing, in some measure, to the high value of the raw material, the stocks in warehouse are limited. Iron has been less active; but large transactions have taken place in coals at very full prices.

Manchester, March 15.—This market has been dull, and in some instances weaker, the mass of orders on hand alone preventing a general decline. For common yarns up to 50's, ¼d per lb less would be very currently accepted, but for future delivery extensive purchasers might be able occasionally to meet with even greater reductions. For common shirtings, 3d per piece below the late highest rates has been taken, but only a few lots sold for India or China. T'cloths, domestics, and light printers have betrayed no great weakness, but some of the heavy and better grades have been quoted lower. General articles cannot be said to have been much tested, and most of them are still deeply pre-engaged.

Bradford.—Wool—There is but little change to notice in the character of business transactions during the past week. The firmness manifested at Bristol fair has imparted the like feeling amongst the staplers here, but business is far from animated. In noils and shorts the market keeps bare, and prices steady. Yarns—There have been more inquiries by the export houses, and some small sales have been made. The home consumption keeps steady, with a shade better demand. Pieces—There is more doing in goods.——Rochdale.—Wool—The tone of this market remains very firm, and business has been much more active in our warehouses generally than last week, especially in skin wools. The prices paid have been fully 10s in advance of those ruling before the commencement of the London sales. Flannel—The operations in most descriptions of flannels have been rather quiet. The Yorkshire flannels are still very active, and prices are well sustained.——Leeds.—There has been a moderate attendance of merchants in the halls, but the market has been quiet in tone, and only a limited business has taken place.——Huddersfield.—Orders continue to flow in upon the manufacturers, who are all fully employed. The wool market—no bad test of the general prosperity of the trade—sustains the brisk and buoyant character that has distinguished it for some weeks past.——Leicester.—The hosiery trade is in a tolerable state of activity; in many branches there is a good business doing, and future prospects are of a satisfactory nature. Machinery is well at work, and the workpeople are fully employed. In the country districts the hosiery trade is in a healthy state. Wools are firm, and command high prices. There is no important change in the yarn market.——Nottingham.—There is very little change to report in the condition of the lace trade. Buyers pur-

chase only in small quantities, and manufacturers produce accordingly. The home trade is exceedingly dull, and there is not an average business doing for shipment. The plain branch is perhaps more brisk than any other. The fancy trade remains without change. The silk lace trade is still quiet. There is a fair quantity of business doing in hosiery for the time of the year, and now that the season is becoming warmer an increased demand may be expected. The operatives generally are well employed. Yarns are extremely high in price, and operate against manufacturers receiving a fair profit on their goods.——BELFAST.—No change has taken place in the value of linens; but the market continues in a healthy state.——DUNDEE.—The business doing in this market is somewhat limited. Prices, however, are well supported.——BIRMINGHAM.—The home trade continues steady and healthy; but being now within a short space of the end of the quarter, the factors avoid giving out large orders if they have them on hand; but the manufacturers are not at present experiencing any of the effects of the partial quiet which is said to prevail, a very large proportion of them having sufficient orders on their books to keep them going until nearly the end of the month. The iron trade of South Staffordshire is rather dull; but for best qualities of finished iron prices are firm.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Feb. 29.—FLOUR AND MEAL.—The market for State and Western flour is without important change, there having been a steady fair demand for the medium and good grades. The inquiry has been mainly from the local trade, but small lots continue to be taken for shipment. The receipts by railroad are fair, but of course are not sufficient to meet the inquiry, and the stock is diminishing. The transactions for the three days are 20,500 bbls. Canada flour has been in good demand, and sales have been effected at an advance of 15 to 25 cents per bbl: the sales comprise 1,450 bbls, closing firmly at 6.10 dols to 7 dols per bbl. Southern flour is also in good demand at an advance of 10 to 25 cents per bbl on nearly all grades. Export from 1st to 29th February: wheat flour, 37,402 bbls, against 32,930 in 1859.

GRAIN.—The market for all kinds of wheat continues buoyant, under a fair demand from the local millers, combined with a moderately active inquiry for shipment, but the firmness of holders has tended to restrict operations, which are confined to about 24,000 bushels for the three days, including 10,250 bushels Milwaukee Club, in store, at 1.20 dol to 1.25 dol; 2,500 white Canada, 1.52 dol; 5,000 Chicago Spring, on private terms; 3,600 white Michigan, 1.50 dol, and 1,000 Milwaukee Club and 1,800 No 1 Chicago Spring, in store, 1.21 dol, yesterday. Corn is dull and heavy, and prices are 1 to 2 cents per bushel lower. Export from 1st to 29th February: wheat, 59,299 bushels, against 5,990 in 1859; corn, 21,435 bushels, against 19,775 in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Although the value of the best English wheat has advanced 1s per quarter in most of our leading markets, there has been very little activity in the demand, and millers, generally, have shown very little disposition to increase their stocks, notwithstanding that the importations from abroad continue on a very limited scale. In foreign wheats—the supplies of which in warehouse are still large—the transactions have continued on a limited scale, at about previous currencies. Holders, however, have been very firm in their demands. The barley trade is still somewhat active, and the value of all kinds is well supported. In malt, very little is passing, yet all descriptions are selling at full quotations. Oats have only realised extreme rates, although the fresh supplies are trifling; whilst the value of beans has had a drooping tendancy. Both peas and flour have commanded full currencies. The transactions, however, have not increased.

Letters from most parts of the Continent state that more business has been done in wheat for shipment to England in the spring, at very full prices. Barley and all other descriptions of spring corn have sold freely, on former terms. In the United States, both wheat and flour continue to sell at prices considerably above the limits forwarded from Liverpool; indeed, we may well doubt whether we shall receive any additions of importance to our stocks during the next three or four months. The supplies at the leading shipping ports have lately been much reduced, and very few additions are likely to be made to them until after the re-opening of the canal navigation. It is believed, however, that considerable quantities of produce still remain in the interior of the country. The profit on the shipment of maize to the United Kingdom is still very small.

In Scotland, wheat, though in fair average supply, has commanded more attention, and fine samples have sold at a slight advance in the quotations. Spring corn has continued to rule high in price, with a good demand, both for home use and shipment to the South. It is stated that a large quantity of grain is still in stack in most parts of the country.

There has been no movement of importance in the Irish markets. Fine wheat, oats, and beans have commanded rather more attention, at very full prices. In other articles, the transactions have continued on a limited scale. The shipments to England have not increased.

Only a limited supply of English wheat was on offer here to-day, and for all kinds the demand ruled steady at fully Monday's currency. In the value of foreign wheat no change took place. All kinds of spring corn moved off freely at extreme rates. The flour trade was steady.

The following particulars, in reference to the floating trade, are furnished by Mr Edward Rainford:—Floating Cargoes—There have been 11 arrivals off coast for orders since the 6th inst., viz.:—Wheat, 1 cargo from Odessa, and 1 Berdianski; maize, 1 cargo from Ibraila, and 1 Lagos; rye, 1 cargo from Galatz; barley, 2 cargoes from Sulina, 3 Ibraila, and 1 Lagos. Of these, about 6 or 7 were disposed of previously. The business in cargoes afloat is less active. The following are the transactions since this day week:—Wheat, arrived, a cargo of Taganrog Ghirka at 46s 6d, with option to reject 100 quarters, and 2 Odessa Ghirka at 46s and 46s 6d per 492 lbs. Maize, arrived, a cargo of Danube, damaged, at 31s 4½d per 480 lbs; on passage, 2 Salonica, at 32s 10½d and 32s 9d; and 1 Ibraila (per steamer direct to Liverpool), at 31s 6d per 480 lbs; also 1 cargo of Odessa at 35s per 492 lbs, condition guaranteed; now shipping, 1 Odessa at equal to 34s 4d per 492 lbs; and 1 Ibraila at 30s 7½d per imperial quarter. Barley, arrived, a cargo of Baltchick at about 26s 3d per 400 lbs; and 1 Ibraila at 28s 3d per 400 lbs duty paid, ex ship in Liverpool; just shipped, 2,000 quarters Danube at 23s per imperial quarter; to be shipped, 2 cargoes Danube at equal to about 22s 6d; and 5,000 quarters ditto, for shipment in March or April, at 22s 9d per imperial quarter. Beans, arrived, 2 cargoes Egyptian at 32s 6d and 32s 7½d per imperial quarter. At the close of to-day's market, there remained for sale 3 cargoes of Azof wheat, 1 maize, 1 barley, and 1 Egyptian beans, held for current prices.

The London averages announced this day were:—

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR RECORD OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—An improved demand sprung up at the close of last week, which has since continued, and prices, with some few exceptions, are 6d higher. The anticipated large reduction in the French duties on sugar has partly stimulated the inquiry, yet the transactions for export are still moderate. Several parcels have sold on speculative account. The Netherland Trading Company's sale, on the 13th inst., went off well, good to fine qualities bringing the full valuations, while soft sold rather lower. Moderate supplies brought forward at the sales here have passed off with fair spirit, and the operations in West India to yesterday amounted to 1,960 hhds, including Jamaica at 38s 6d to 41s 6d;

grainy Berbice, 40s 6d to 45s 6d per cwt. The landings last week amounted to 4,350 tons, and the deliveries to only 3,720 tons; consequently, the stock has increased to 51,700 tons, or 5,200 more than at the same date in 1859.

Mauritius.—The public sales comprised 3,163 bags, the bulk of which sold as follows: low to very good yellow, 40s to 44s; low to good brown, 31s 6d to 38s 6d; strong dry grainy yellow, 42s 6d to 45s 6d; fine brown, 41s 6d to 42s; crystallised yellow, 46s to 47s 6d per cwt. A floating cargo is reported sold at 36s 6d and 43s for the United Kingdom, Nos. 8½ and 11.

Madras.—4,675 bags found buyers: brown, 31s 6d to 33s; low to good yellow, 33s 6d to 38s per cwt. Some few parcels have also changed hands privately.

Bengal.—Privately, 1,200 bags Gurpatta date realised 37s 6d to 39s 6d per cwt.

Foreign.—By auction, yesterday, 600 boxes Havana found buyers: yellow, 42s to 45s 6d; washed, including florettes, 41s to 47s. 860 baskets Java, 42s to 45s. 325 casks muscovado, from New York, were chiefly bought in above the value. Privately, 24,000 bags Manilla have changed hands: clayed, 39s 3d; washed in proportion; unclayed, 33s 6d; 7,000 bags low brown Siam, 31s 6d; 350 baskets Java, No. 9, 42s; 4,000 boxes Havana, yellow and florettes, 42s to 49s; 300 chests white Bahia, 44s; 350 casks Surinam, to arrive from Holland, 39s 3d; and 372 baskets Java, also to arrive, at 27s 6d. A floating cargo of clayed Manilla has sold for this port at 39s 3d, and one of Brazil at 24s per cwt for Gottenburg.

Refined.—A firmer tone pervades this market. Common goods cannot readily be obtained under 51s. Crushed and pieces have sold more readily since last Friday.

Rum.—The market is still dull and inactive. A parcel of proof Leewards, of common quality, has sold at 1s 8d to 1s 8½d; Demerara, 2s to 2s 2d per gallon. The stock of rum amounts to 26,215 puns 5,940 hhds, against 23,610 puns 4,710 hhds at same date last year.

Cocoa.—Latest sales in Trinidad, by private contract, have been at 75s to 100s for low to fine red. At public sale, 476 bags Grenada brought 62s to 69s for grey to good red, being barely former rates. 69 bags Trinidad were taken in above the value.

Tea.—The market has been dull during the week, and very little business is reported by private contract. Public sales were declared for Wednesday next.

Coffee.—Moderate supplies have been brought forward, which realised fully previous rates, and holders continue very firm. 528 bags 60 casks native Ceylon by auction were chiefly sold: good ordinary to good, 60s to 62s. The better grades of plantation went at high prices, 242 casks 369 barrels and bags nearly all finding purchasers: good to fine marks, 79s 6d to 94s; fine fine ordinary pale to middling, 65s 6d to 73s. 812 bags Costa Rica were bought in at 68s to 72s. 97 cases East India withdrawn. 800 quarter bales clean garbled small berry Mocha, of indirect import, were bought in at 120s, and since part sold at 112s 6d. 123 bags pale Malabar sold at 64s to 64s 6d. A floating cargo St Domingo has sold for the Mediterranean at 64s; also one of Bahia at 54s 6d; and one of Santos for a near port at 58s per cwt.

Sago.—Of 1,592 boxes in public sale, nealy 1,000 sold; small grain middling to good, 16s 6d to 18s; good bold, 17s to 17s 6d; medium 16s 6d per cwt.

Rice.—A large business has been done, including several parcels of soft grain descriptions, at very full prices; Rangoon and Necrancie, 9s 3d to 9s 9d; low, 8s to 8s 3d; Bassein, 9s 1½d to 9s 6d; low to fine white Bengal, 9s 1½d to 13s 9d; Dacca, 10s. By auction, 3,230 bags good Moulmein were sold at 9s 9d. 4,265 bags Arracan, of old import, went from 8s 6d to 9s; badly weevily, 6s 6d. 1,260 bags Bengal rice, imported in 1857, good middling to good, 12s 6d to 13s. 650 bags Madras, 9s 6d to 10s. 1,200 bags Java, low middling yellowish, 10s 6d to 11s 6d. 4,300 bags good Rangoon were held at 9s 9d per cwt.

Imports and Deliveries of Rice to March 10, with Stock on hand.

Spices.—18 cases brown nutmegs were mostly bought in above the value. 9 casks, rather bold, sold at 2s 7d to 2s 8d. 3 casks 14 cases mace, low and middling, sold at 1s 2d to 1s 3d. 144 bags Amboyna cloves brought 4¾d to 5d. 1,990 bags Singapore pepper found steady buyers at 4½d to 4¾d; and 239 bags common Batavia, 4d to 4¼d. 390 bags white Singapore were taken in at 7d to 7⅝d per lb.

Saltpetre.—The market has been very animated, with large transactions, the latest establishing a rise of 3s to 4s. Bengal sold by private contract at 39s 6d to 45s, refraction 12½ to 13¾. The public sales, yesterday, passed off flatly, there being no buyers at the above rates, and 1,310 bags were bought in: refraction 14 to 7½, 39s 6d to 42s 6d per cwt. This rise is owing to the export duty of 2 rupees per factory maund being imposed in India. Refraction 7½ since sold at 42s 3d per cwt.

Imports and Deliveries of Saltpetre to March 10, with Stock on hand.

Stock	4450	2920	4960	2250

Delivered last week 300 tons.

Cochineal.—The market is flat. 167 bags by auction partly sold: silvers, 3s 4d to 3s 6d; blacks, from 3s 10d to 4s 1d; Honduras blacks, low small, 3s 6d to 3s 9d; ordinary, 3s 10d to 4s; silver, 3s 1d to 3s 9d per lb.

Lac Dye.—56 chests J E brought 1s 2½d to 1s 3d per lb. Nothing of importance has transpired by private contract.

Shellac is scarce and higher: garnet, 10*l* 7s 6d to 10*l* 10s; button, 8*l* 6d to 8*l* 11s per cwt.

Dyestuffs.—Gambier is quiet at 16s 9d to 17s. Cutch has been sold a limited extent at 29s per cwt for good. 50 bales Bengal safflower went rather dearer, especially the better sorts: ordinary to fair, 7*l* to 10*l* 15s per cwt. Yesterday, 78 bales were bought in above the value.

Drugs.—The public sales, yesterday, did not establish any important change in prices. Aniseed oil brought 8s 5d per lb. Cubebs declined to 12*l* per cwt.

Metals.—The most important feature in the market this week has been the reduction upon copper of 5*l*, viz., cake and tile, 112*l* per ton; sheets, 1s 0½d per lb. Iron remains dull. Scotch pig has fluctuated slightly, closing at 58s 6d per ton for mixed Nos. British is nominally unaltered. The spelter market has been quiet: 20*l* 17s 6d per ton has been paid for arrival. Foreign tin has become inactive: Straits, 131s; Banca, 137s; but holders generally are firm.

Hemp.—Manilla is held more firmly. Latest transactions privately were at 23*l* to 25*l* 10s for common to good roping quality, and holders now seem indisposed to sell unless at an advance. The jute market has become inactive. 1,115 bales, by auction, were partly sold at easier rates: common to good, 13*l* 12s 6d to 19*l* per ton. Russian hemp is firmer, at 28*l* 10s per ton for clean.

Linseed is firm. East India on the spot 49s to 53s 6d. Calcutta afloat has sold at 49s 6d. Black Sea and Azoff for forward delivery has sold at 49s 9d per quarter delivered here.

Oil.—Olive has been in limited demand; Gallipoli, 61*l* 10s; other kinds, 55*l* to 59*l* per tun. Several cargoes various sorts have sold for Russia. Linseed has been active within the past few days at 28s, and 29s to 29s 6d for future delivery. The late advance in rape is fully maintained: foreign refined, 41s 6d to 42s; brown, 41s. Cocoa-nut is rather quiet: Cochin, 45s to 45s 6d; Ceylon, 42s to 42s 6d. Palm dull, and the nominal value of fina has been 46s per cwt. Stocks of common fish oils are chiefly in second hands. Sperm held firmly at 100*l* per tun.

Turpentine.—2,500 barrels rough have sold at 9s 3d. Spirits are dull at 36s to 36s 6d per cwt for American.

Tallow.—The market has been unsettled, and the consumers buy rather sparingly, although they now obtain the advantage of the repeal of the 1s 6d duty. This morning foreign rules about 1s lower, viz., 1st sort Y.C., 58s on the spot. A large business has been done for the month at 58s; for delivery in April to June, 55s is the quotation; and 52s 6d to 53s per cwt for the last three months.

Particulars of Tallow.—Monday, March 12.

POSTSCRIPT. Friday Evening.

Sugar.—The sales went off steadily to-day: 330 casks West India 13,300 bags Mauritius, and 800 bags Madras finding buyers at previous rates in most cases. About 2,510 casks British West India have sold during the week.

Coffee.—142 casks 31 barrels plantation Ceylon went rather dearer. 1,200 bags native sold at 59s 6d to 62s; triage, &c., 47s to 53s. 50 half-bales Mocha at 113s per cwt.

Cocoa.—203 bags Guayaquil were taken in at 73s per cwt.

Saltpetre.—256 bags Bombay, refraction 42¾, sold at 34s. Some business is reported for arrival, of which particulars do not transpire.

Cochineal.—250 bags went at steady prices. Teneriffe as previously quoted; Mexican black, 3s 6d to 3s 8d; silver, 3s 6d to 3s 8d per lb.

Shellac.—50 chests good native orange realised 9*l* per cwt.

Oils.—At public sale this afternoon 30 tuns sperm sold at 100 per tun.

Tallow.—The market continues flat. The chief feature at the public sales to-day was the sale of 600 casks wrecked Petersburg Y. C., which sold "on account of whom it may concern" at lower prices, from 52s to 55s. 368 casks Odessa brought 57s to 58s. Y.C. is quoted 57s 6d to 58s on the spot; 52s 6d to 53s for delivery in October to December. Town was reduced to 58s per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar remains very firm, in some instances 6d dearer for unstoved goods. Here very little demand for Dutch crushed. A small parcel of B & A has fetched the same price as last week, viz., 32s 4d; since which 60 tons of A S S R, at 32s 6d, f.o.b. in Holland. By letters this day a large business has been done in Holland, about 1,100 tons, at 33s, deliverable April and May.

Green Fruit.—Demand continues good. Stock of oranges reduced. Some cargoes of St Michael's, sold by Keeling and Hunt at public sale went at prices equal to those of last week. Lemons in request, buyers obtaining the advantage of the repeal of the duty. The same may be applied to nuts, and the public will derive the full benefit from the alteration in the tariff.

Dry Fruit.—The clearances of currants continue on a very large scale, 1,600 tons in five days, equal to those of February and March last year. As the public are consuming them freely, though as yet only the low descriptions, the deliveries may be expected to continue large. Full prices were obtained for damaged parcels of low quality at auction, and of such the stock will soon become much reduced. Holders have been this week too eager to realise, and have offered too much, and damped the market. Raisins are neglected, though comparatively cheap. Figs sell from 35s to 56s per cwt, the demand being for low sorts of Turkey and for Faro figs at 31s to 32s, to meet the latter of which several thousand packages have been brought over from Germany, Belgium, and Holland, which, but for the reduction in duty, would have remained there.

Seeds.—The seed trade rules very quiet for the season of the year.

English Wool.—The market steady; prices firm.

Colonial and Foreign Wool.—The public sales are progressing firmly at fully opening rates.

Flax unaltered.

HEMP.—Market firm and a considerable amount of business transacted during the week.

COTTON.—No sales reported in cotton this week.

SILK.—Market still quiet. Prices unaltered.

TOBACCO.—There has been a full average demand for most descriptions. Importers have submitted to concessions in price for round lots, but selections are not obtainable under full quotations.

TIMBER.—Business in wood has been moving, since the remission of duty, and a more active demand is expected for the spring work. There is a small advance in the net value of foreign wood, possibly equal to one-third of the remitted duty; but the London trade is quite indisposed to yield to the extravagant demands of the foreign shippers for the shipment of wood in the North of Europe. There is ample stock here to be independent for some time to come, and no better market is open for shipments, which are sure to be made as the season advances, of that large surplus which always remains over and above the outport orders. In American pine deals we hold our way, and do not seem to be further affected beyond the small per centage of 2½ per cent. on common spruce deals, which may be expected to be the whole effect of the Norway and Baltic competition now more immediately in prospect. Ship-building timber stands high. Staves are flat, and scarcely maintain the recent quotations.

LEATHER AND HIDES.—There is no change to report in the leather market since our last impression. During the past week about an average demand has existed, chiefly for good light common dressing hides, shaved hides, English butts, and calf skins. At Leadenhall, on Tuesday, the supply of fresh leather was small; the demand was very limited, and prices unaltered. At the public sales of raw goods, last week, very little was brought forward. There was a small attendance of buyers, and not much business done. The East India kips met a limited inquiry; only about 20,000 (out of 80,000 offered) were sold. The quality was generally doubtful, and they were withdrawn for high rates. By private contract, 2,629 salted Rio Grande hides have been sold, 65¼ lbs, at 8¼d, tare 6 lbs.

METALS.—Metals show no revival. A reduction was notified in English copper on the 13th instant of 5*l* per ton on raw and ½d per lb on manufactured, which has had little effect upon business. Iron rules steady in all respects. Tin is hardly so buoyant for foreign, but still holds up firmly, and is in moderate demand. Spelter shows no change, and the same may be said of lead. Tin plates are mostly firmer in quotations.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	58	0
Fat by ditto	3	0½
Yellow Russian	59	6
Melted stuff	41	0
Rough ditto	24	0
Greaves	16	0
Good dregs	7	0

Imports this week 1,947 casks.

PROVISIONS.

The bacon market has been gradually improving all through this week. The price now asked is 64s f.o.b.; a large business has been done at 62s and 63s f.o.b. for immediate shipment. There is very little doubt that they will maintain much higher prices, for what the shippers are now giving for pigs will barely pay their expences, and should we have milder weather to bring on vegetation, there is no doubt that before the end of next month we shall have bacon at 70s f.o.b.

Butter—Fine Friesland 124s; trade very slow; an immense supply of foreign butter this week.

COMPARATIVE STATEMENT OF STOCKS AND DELIVERIES.

METROPOLITAN CATTLE MARKET.

THURSDAY, March 15.—The supply of beasts on offer in to-day's market was only moderate; nevertheless, all breeds moved off slowly at Monday's currency. The extreme value of the best Scots was 4s 10d per 8 lbs. Sheep, the show of which was rather limited, were a dull inquiry. Prime Downs and half-breds supported late rates, but all other qualities, including clipped sheep, declined in value 2d per 8 lbs. We have to report a dull sale for lambs, at 2d per 8 lbs less money. Calves were heavy, and 4d per 8 lbs lower than on Monday. The top price was 5s 8d per 8 lbs.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	6	5	8

HOP MARKET.

BOROUGH, Monday, March 12.—Our market continues in the same inactive condition as of late; but from the firmness evinced by holders of stock, and the few samples pushed for sale, prices have been only slightly affected. Our currency is nominally as follows:—Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, March 16.—The settlement of the hop duty question last night has given a better tone to this market.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, March 12.—During the past week the arrivals coastwise have been large, and trade dull; the prices of the former week were barely maintained. The following are this day's quotations:—York Regents, 90s to 140s; Lincolnshire ditto, 80s to 95s; Dunbar ditto, 100s to 120s; ditto reds, 90s to 100s; Perth, Forfar, and Fifeshire Regents, 80s to 100s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, March 15.—Fair supplies of home-grown produce have come to hand since our last report, coastwise and by land conveyance, and generally in good condition; but trade, in consequence of the increased supply, is rather less active, at the subjoined prices:—York Regents, from 140s to 160s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto Cups, 90s to 100s; Dunbars, 100s to 105s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 3*l* 0s to 4*l* 10s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 10s per load. A steady trade.

CUMBERLAND.—Meadow hay, 3*l* 0s to 4*l* 10s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 10s per load. Trade firm.

WHITECHAPEL.—Meadow hay, 2*l* 10s to 4*l* 10s; clover, 4*l* 0s to 5*l* 10s; and straw, 1*l* 6s to 1*l* 10s per load. A fair average supply, and a steady demand.

COAL MARKET.

WEDNESDAY, March 14.—Bell's Primrose 13s—Byass's Bebside West Hartley 15s 9d—Grey's West Hartley 15s 3d—Holywell 16s—Howard's West Hartley 15s 6d—Lambert's West Hartley 15s 6d—Tanfield Moor Bute's 13s—Walker Primrose 13s 3d—Wylam 16s 6d. Wall-end:—Cassop 20s—Heugh Hall 19s—North Hartlepool 16s. Carway and Duffryn Malting 22s 6d—Powell's Duffryn Steam 22s 6d. Ships at market, 41; sold, 38.

FRIDAY, March 16.—Wall's-end:—Braddyll's Hetton 20s 3d—Harton 19s—Stewart's 21s—South Hetton 21s—Eden Main 19s 3d—Hetton 21s—Cassop 20s 3d—Heugh Hall 19s 6d. Ships at market, 139.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 16.—We have a fair amount of business doing here this week, and all useful descriptions meet with a ready sale, at current rates. The arrivals of foreign have been very trifling during the last two or three weeks, and stocks are consequently but light.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 16.—Moderately attended, fair business in wheat, at a further slight advance. Flour in good demand at Tuesday's quotations. Beans and Indian corn very firm, the latter being held for higher prices; all other articles selling at full prices.

METALS.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 16.—The market for manufactured iron during the past week has been quiet, with little variation to note in prices. Scotch pig iron also remains almost unchanged in value, with operations only to a moderate extent. The price of copper has this week been reduced ½d per lb on manufactured, and 5*l* per ton on unmanufactured copper, with a quiet market since. Lead and spelter slightly easier.

The Gazette.

TUESDAY, March 13.

BANKRUPTS.

W. Ellis, Pennyfields, Poplar, shipjoiner.
E. Weisse, Piccadilly, milliner.

EPITOME OF RAILWAY NEWS.

TRAFFIC RECEIPTS.—The traffic returns of railways in the United Kingdom for the week ending March 3 amounted to 453,810*l*, and for the corresponding week of 1859 to 433,570*l*, showing an increase of 20,240*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 189,770*l*, and for the corresponding week of last year to 185,884*l*, showing an increase of 3,886*l*.

BOMBAY, BARODA, AND CENTRAL INDIA.—It appears that the section of this company's line from Amrolee to Poorwadi, 30 miles in length, was opened on Tuesday, the 7th of February last, with great eclat, and that the Rajah of Baroda, the resident, the civil and military officers, the Government native servants of rank, and most of the respectable people of the district were invited to the ceremony.

CALEDONIAN.—The half-yearly meeting of this company was held on Tuesday in Glasgow. The chairman, in moving the adoption of the report, observed that the expenditure on capital account during the half-year had amounted to 33,600*l*. They had renewed 41,000*l* of their debentures, at the low rate of 3½ per cent. The report was adopted, a dividend at the rate of 5 per cent. per annum was declared, the conversion of the preference half-shares into preference stock was agreed to, and a dividend at the rate of 5 per cent. per annum was declared on the Lesmahagow shares.

SCOTTISH CENTRAL.—The directors of this company state in their report that 50,710*l* had been received during the half-year ending the 31st of January last on account of debenture stock, and 50,000*l* for additional 4½ per cent. irredeemable preference stock. The payments on capital account included 64,428*l* paid in extinction of loan or mortgage debt, and 11,617*l* for sundry expenditure. The conversion of the 5 per cent. and 4½ per cent. redeemable preference stock created in 1851 into an irredeemable preference stock, bearing 4½ per cent. per annum, had been effected. The preference stock was now consolidated into one general stock, amounting to 343,400*l*, and bearing one uniform rate of interest. The annual saving from this conversion was 750*l*.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, March 12.—The railway market moved with the funds. The opening prices showed increased buoyancy, but subsequently declined, from which there was only a partial recovery. Foreign shares showed a stronger tendency, and Pernambuco, Lombardo-Venetian, and some French lines improved. American railway bonds were in better demand, especially those of the Michigan Central and Illinois Central. Mines were dull, and in several cases showed a decline. In joint stock banks there was a good inquiry for Oriental shares at an improvement; Ottoman were steady at 19 to ½; Australian were flat. In the miscellaneous market there was a reaction in Peninsular and Oriental Steam.

TUESDAY, March 13.—The railway market showed little animation, but was generally firmer. In the colonial market, Indian guaranteed, especially the original East Indian, continued to improve. Buffalo and Lake Huron, Great Western of Canada and Grand Trunk, of which the last quotation was 33½ to 34, were also better. Foreign shares were steady. Lombardo-Venetian left off 1⅞ to 1½ premium; Pernambuco, 1⅝ to 1⅝ discount; and San Paulo, ⅜ to ½ discount. Illinois Central shares were 1 dol higher. There was no change of importance in mines or joint stock banks. In miscellaneous descriptions, Peninsular and Oriental and Royal Mail Steam improved, while Australian Agricultural slightly declined. The New Canadian loan was last quoted 1⅛ to ⅞ premium scrip, and 100½ to ¾ bonds.

WEDNESDAY, March 14.—The railway market was buoyant the whole day, and closed firmly at a further advance. The preparations for the approaching settlement showed increased purchases for investment. The principal demand to-day was for Great Northern A, which, after being 109 buyers, left off 108 to 109, or 1½ per cent. higher than yesterday. The ordinary stock also improved 1 per cent., and the other leading British railways ½ to ⅝. South-Western and Caledonian were exceptionally dull. In the colonial market, Indian guaranteed continued in good demand, and Great Western of Canada and Grand Trunk have improved. Foreign descriptions showed no general change, but Great Luxembourg and Pernambuco were a fraction better. Nova Scotia Government bonds have also advanced ½ per cent. There was more business done in mines, and prices were occasionally higher. In joint stock banks, City improved steadily, and Ottoman were firm, at 19½ to ¾. The successful completion of the telegraph between Kurrachee and Alexandria caused a rise in the shares of the Red Sea Telegraph Company.

THURSDAY, March 15.—The railway market opened at a further advance, from the favourable traffic returns, but the reaction on the funds caused a relapse, especially among the heavier stocks. In most cases, however, the closing quotations were ¼ to ⅜ per cent. higher than yesterday, Midland, South-Western, North-Eastern, and North British showing the chief improvement. The colonial market was firm, particularly as regards Indian descriptions most of which were quoted at an advance. In foreign shares a rise occurred in Lombardo-Venetian, Bahia, Northern of France, and Paris and Lyons. American securities were steady.

FRIDAY, March 16.—A fair amount of business was done in the railway share market, but prices showed less firmness. Joint stock bank and miscellaneous shares remained steady at about previous rates. Bank of Australasia ex div. are 71¼ 72. Oriental Bank, 44¼ 45. Peninsular and Oriental Steam, 80; and Crystal Palace, 27½.

FLEET STREET.
A NEW DISCOVERY IN TEETH.

MR HOWARD, SURGEON-DENTIST, 52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepared by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to John White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 7s 6d to 16s each; postage, 6d.

WHITE, Manufacturer 228 Piccadilly, London

HOLLOWAY'S PILLS.—Bilious affections, induced by atmospheric changes or too liberal diet, should be checked at once or serious consequences may ensue. When any one finds his ideas less clear than usual, his eyesight dimmed, and his head dizzy, which indisposes him for all exertion physical or mental, he may be quite sure that he is in immediate need of some cooling and purifying medicine. Let him send at once for a box of Holloway's Pills, which will free him from his sufferings, and speedily renew his usual healthful feelings. If the bowels be irritable, Holloway's Ointment should be rubbed over the stomach and liver every night and morning. It will wonderfully augment the corrective power of the Pills.

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints. Du Barry's delicious Health-restoring Revalenta Arabica Food.—Certificate No. 36,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hæmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pinskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 33s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., 181 Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

EAU-DE-VIE.—THIS PURE PALE BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

CURES OF INFLUENZA, COUGHS, COLDS, &c., by DR LOCOCK'S PULMONIC WAFERS.—From Mr James Drury, Medicine Warehouse, 224 Stone bow, Lincoln.—"Gentlemen,—I am authorised by several ladies and gentlemen, whose names I can give if required, to state that Dr Locock's Wafers have proved of the highest efficacy to them for coughs, colds, hoarseness, wheezing, influenza, sore throat, &c., &c. The demand for the Wafers increases daily, and in almost every sale I hear of the benefits obtained by their use. The present weather has given sufficient proof of their efficacy, &c. (Signed) James Drury."—Dr Locock's Pulmonic Wafers give instant relief and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. To singers and public speakers they are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1s 1½d, 2s 9d, and 11s per box. Sold by all druggists.

KEATING'S COUGH LOZENGES.—Statistics show that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; he, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Calnscross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, sir, your most obliged servant, W. J. Tagg."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies PATENTED INCORRODIBLE TEETH, without extracting Teeth or stumps, on his never-failing and painless principle of SELF-ADHESION, rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his OSTEOPLASTIC Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c., by W. HILL, Esq., M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By Henry Smith, Esq., 8 Burton crescent, Tavistock square, London, W.C.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES' ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included.

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

Certain Means of Self-Cure Gratis.

THE NEW FRENCH REMEDY as prepared by the Ecole Pharmacien, Paris, has been used by the most eminent of the Medical Faculty on the Continent for several years, with great success, and has been found a certain remedy for effectually restoring the Nervous and Debilitated to a state of vigorous Health and Manhood, when the Nervous System has been weakened by the Errors of Youth, or from any other cause. All Impediments to Marriage are speedily removed by this wonderful discovery. Full particulars forwarded gratuitously to any address, with every instruction for self-cure, on receipt of a stamped directed envelope, by MONS. DUVAL, Patent Medicine Agent, Birmingham.

Just published, in 1 vol. 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,

VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.
(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

MEDICAL ADVICE.

DR LA'MERT, REGISTERED L.S.A., Honorary Member of the London Hospital Medical Society, M.D. of the University of Erlangen, &c., may be CONSULTED on all cases of Debility, Nervousness, and the Secret Infirmities of Youth, and Maturity, from 11 till 2, and from 6 till 8, at his residence,

37 BEDFORD SQUARE, London.

Dr La'Mert has just published, price Sixpence, with numerous Engravings and Cases, a New Edition of his Work, entitled,

SELF-PRESERVATION

which will be sent free in a sealed envelope. Mann, 39 Cornhill, London, or by the Author to any address, for eight stamps.

CONTENTS.

Section I.—The Physiology of the generative Organs.
Section II.—Puberty—Manhood—The Morale Generative Physiology—True and False Morality.
Section III.—Marriage in its Moral, Social, and Physical Relations—Its Expectancies and Disappointments—Advantages of Physical contrasts in securing Healthy offspring.
Section IV.—Spermatorrhœa and Impotence—The Causes of Sterility in both sexes—Self-Inflicted miseries.
Section V.—The Vices of Schools—Effects of certain pernicious habits on the mental and generative faculties—Importance of Moral Discipline.
Section VI.—Treatment of nervous and generative debility—Impotence and sterility—Dangerous results of various hazardous specifics—The Author's principles of treatment; medical, dietetic, and general, derived from twenty years' successful practice.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps.

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

Contents.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

Mr Curtis, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by Mr Curtis having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 157 FENCHURCH STREET.

PEMARTIN'S SHERRIES,

AT THE REDUCED DUTY.

HOMŒOPATHIC COCOA.—
TAYLOR BROTHERS' HOMŒOPATHIC COCOA is unequalled as an article of Diet for Homœopathic Patients, Dyspeptics, and Persons of delicate constitution.
Sold by all Grocers, in Tin Foil Packets, at 1s 4d per lb

SOYER'S SULTANA SAUCE,
Relish, Succulante, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

HARVEY'S FISH SAUCE.—
Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for further security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."
6 Edwards street, Portman square, London.

HANDSOME BRASS AND IRON
BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

ALLSOPP'S PALE OR BITTER
ALE.—Messrs S. ALLSOPP and SONS beg to inform the Trade, that they are now registering orders for the October Brewings of their Pale Ale in Casks of 18 Gallons and upwards, at the Brewery, Burton-on-Trent; and at the undermentioned Branch Establishments:—

LONDON	At 61 King William street, City.
LIVERPOOL	At Cook street.
MANCHESTER	At Ducie place.
DUDLEY	At Burnt Tree.
EDINBURGH	At Union street lane.
GLASGOW	At 115 St Vincent street.
DUBLIN	At 1 Crampton quay.
CORK	At 25 Cook street.
BIRMINGHAM	At Temple street.
WOLVERHAMPTON	At Exchange street.
WORCESTER	At the Cross
SOUTH WALES	At 18 King street, Bristol.

Messrs ALLSOPP and SONS take the opportunity of announcing to private families that their Ales, so strongly recommended by the medical profession, may be procured in Draught and Bottles genuine from all the most respectable wine and beer merchants and licensed victuallers, on "ALLSOPP'S PALE ALE" being specially asked for.

When in bottle, the genuineness of the lable can be ascertained by its having "ALLSOPP and SONS" written across it upon red and white ground striped.

TRADE MARK.

BROWN AND POLSON'S
PATENT CORN FLOUR.—
The LANCET states, "This is superior to anything of the kind known."—It is respectfully announced that to any application by letter, Brown and Polson forward the address (for any village or town in the Three Kingdoms) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as Brown and Polson's," if the name, address, and designation are kindly communicated, such confidence will be greatly appreciated.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, and 23 Ironmonger lane, London.

OVERLAND ROUTE.—
COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Reunion, Ceylon, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NOTICE.—The Steamers for Halifax and Boston are intended to call at Cork Harbour, on both outward and homeward passages, to land and receive Mails.

BRITISH AND NORTH
AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and Her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—

NIAGARA, for BOSTON, Saturday, March 24.
PERSIA, for NEW YORK direct, Saturday, March 31.
AMERICA, for BOSTON, Saturday, April 7.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, Water street, Liverpool.

IMPROVED ACCOMMODATION FOR PASSENGERS LANDING AND EMBARKING AT ST KATHARINE'S WHARF.—An additional and separate entrance, leading direct to and from the steamers alongside the wharf, with waiting-rooms attached, has been provided for the use of passengers only, by which all confusion and inconvenience arising from the goods traffic is avoided.

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormoln ornaments and two sets of bars, £3 15s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormoln ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 5s per dozen; Desserts, 5s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—

The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily or Pattern.	King's or Military, &c.
	£ s d	£ s d	£ s d	£ s d
12 Table Forks	1 13 0	2 4 0	2 10 0	2 15 0

It contains upwards of 400 Illustrations of his illimited Stock of Electro and Sheffield Plate, Nickel Silver, and Britannia Metal Goods, Dish Covers, and Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Urns and Kettles, Tea Trays, Clocks, Table Cutlery, Baths and Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Furniture, &c., with List of Prices, and Plans of the Sixteen large Show-rooms, at 39 Oxford street, W.; 1, 1a, 2, and 3 Newman street; and 4, 5 and 6 Perry's place, London.—Established 1820.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

A TOILETTE REQUISITE FOR

THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of OLDRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street north, Strand, W.C.

OILS, SOAPS, AND CANDLES.—

The original Depôt for LILLE COLZA OIL of the purest importation, 4s 6d per gallon, in any quantity. Household Yellow Soaps, 36s, 40s, 44s, 46s and 48s per cwt. The most durable Soaps in the trade. Store Dip Candles, 7½d per lb. Wax-wick Moulds, 8½d per lb. Price's Composites, 8d, 9d, 10d, and 11d per lb. Lists free on application. Town deliveries daily per own carts.

WHITMORE and CRADDOCK
16 Bishopsgate street within, E.C., London.
Five pounds worth of goods railway free.

MODERATEUR LAMPS,

4s each; Colza Oil, 4s per gallon.—This oil is of the finest quality and of greater illuminating power than any before offered to the public. The variety of elegant Moderateur Lamps, Gas Chandeliers, Brackets and Hall Lanterns in these extensive show-rooms, and the extreme low prices, are particularly recommended to the attention of purchasers. Also, the immense stock of fashionable Stoves, Fenders, Fire Irons, superior Cutlery, Tea Trays, Baths, and Japan Ware, brilliant Electro-Silver Plate, General Furnishing Ironmongery Goods, &c. &c, will be found the most extensive in London, and the prices are all marked in plain figures.—Panklibanon, 56 and 58 Baker street. Illustrated books sent free. N.B.—Registered Fire Guards, 10s each.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality.	Medium Quality.	Best Quality.
	£ s d	£ s d	£ s d
Two dozen full-size Table Knives, Ivory handles	2 4 0	3 6 0	4 12 0
One-and-a-half dozen full-size Cheese do.	1 4 0	1 14 0	2 11 0
One pair regular Meat Carvers	0 7 6	0 11 0	0 15 6
One pair extra size do.	0 8 6	0 12 0	0 16 6
One pair Poultry Carvers	0 7 6	0 11 0	0 15 6
One Steel for sharpening	0 3 0	0 4 0	0 6 0
Complete Service	4 14 6	6 18 6	9 16 6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure Ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the Ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III, c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,
MAPPIN BROTHERS,
Queen's Cutlery Works, Sheffield; and
67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE

ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates.

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

GOOD NEWS FOR SMOKERS.—

NO PUFFING REQUIRED.—Buy the new Patent MEERSCHAUM DUST BILLIARD PIPE, the most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. Manufactory, Silvertown, opposite H.M. Dockyards, Woolwich.

IMPORTANT NOTICE.

GLENFIELD PATENT STARCH

is the only STARCH used in
HER MAJESTY'S LAUNDRY.

And as some unprincipal Parties are now making and offering for Sale an Imitation of the

GLENFIELD STARCH,

we hereby caution all our Customers to be careful, when purchasing, to see that the word GLENFIELD is on each Packet, to copy which is Felony.

WOTHERSPOON and CO., Glasgow and London.

DEANE'S TWO-HOLE BLACK PENS

which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE's Two-Hole Black Pens, 46 King William street, London bridge."

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of ERWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuineness of this Oil are secured in its preparation by the personal attention of so good a Chemist and Intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted. Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES,

THE LESSON OF SAVOY.

THE annexation of Savoy to France is a grave fact, and gives rise to grave reflections. The act itself is grave enough; the manner in which it has been accomplished, and the language in which it has been announced are, in our opinion, graver still. We wish to point out in a few words, quietly and seriously, without anger and without alarm, what conclusions must be forced upon the conviction of Englishmen by the whole course and tenor of the proceedings taken by France in this affair.

First, then, our opinion of Victor Emmanuel and of Count Cavour may be sadly lowered by their tame complicity in what at least *appears* like an underhand intrigue, a shabby bargain, and an unwarrantable cession. We may think they have deceived us, discredited themselves, and disregarded the wishes and the rights of a portion of their faithful subjects. But we are not prepared to say either that England ought to interfere, beyond a simple expression of her sentiments on the matter, to prevent the King of Sardinia from altering his frontier or selling his Savoyards,—or that Italy, Piedmont, and Europe will not all be eventually gainers by an arrangement which strengthens the Kingdom to which the Peninsula must look for its enfranchisement by the addition of Tuscany, Lombardy, Parma, Modena, and Romagna, while weakening it only by the surrender of Savoy and Nice.

Secondly. While condemning and deploring a proceeding on the part of France so at variance with all her recent professions, yet so warningly in harmony with her old policy and her incurable desires, and while admitting that Europe is fairly entitled both to feel and to express her uneasiness and her disapproval, we are by no means certain that the increase of strength, or the improvement of position which France will gain by the acquisition, is so clear or so great as to justify any active opposition, or even any immediate alarm. Nor, however much we may deprecate and detest this recurrence to the infamous old custom of handing over territories and populations by a mere act of will from one sovereign to another, as if they were private property, or slaves, or chattels, do we know that it is our place or duty to step in and forbid the unworthy bargain, especially when the people thus transferred make no appeal to natural justice or to European law.

We do not, therefore, look upon the annexation *in itself*, and in its more material consequences, as being so serious and menacing an act as some of our contemporaries are inclined to do. We may even admit that the Emperor can make out a more plausible plea, of palliation at least, for this act than for many others against which less clamour has been raised; and that Piedmont has, perhaps, made a bargain which, however disreputable, is not altogether bad. But when we turn from the thing itself to its accessories—from the matter to the manner of the transfer—we are compelled to say that we cannot do otherwise than draw thence a conclusion of the highest consequence as regards all our future relations with Louis Napoleon. After what has passed in reference to this transaction, we do not see how it will be possible for our Government, or for any Government, to place the slightest or the *briefest* reliance on any, even the most solemn and deliberate, assurances he may hereafter give, or on the statements he may hereafter make. Henceforth there can be no more cordiality in our intercourse, because there can be no confidence in his intentions, and no trust in his word. Let us recall, in a few sentences, what has taken place.

When he passed the Ticino and entered Milan, he solemnly proclaimed his pure disinterestedness in endeavouring to break the Austrian yoke, and, in the most specific language which could be devised, repudiated the faintest surmise of aggrandising designs. When he returned, baffled, and only half victorious, he repeated his disclaimer, and boasted that France alone, among all the nations of the world, was capable of "making war for an idea." Yet now he ends by seizing the precise territory which France has always coveted, and he does so on the ground of that very augmentation of Piedmont which it was the object of the Italian war to give her.

Even so recently as the commencement of the present Session, if we are not mistaken, and certainly more than once during the last autumn, he assured our Ministers, to allay their incipient suspicions, that no bargain or agreement had been entered into between France and Sardinia relative to the cession of Savoy. It is now *known*—we believe we may say—that before a single French soldier crossed the Alps in 1859—nay, as far back as the 17th of January in that year—such a definite and written agreement *had* been entered into, and was signed by his own hand.

When the existence of some such compact for the transfer of Savoy became too notorious any longer to be denied, he assured Lord John Russell, and authorised Lord John to assure the House, that, however confident in the justice of his claim, "he would not take any steps to carry "it into effect, without first consulting the Great Powers of "Europe." He has now, as we learn from his speech to the Savoyard Deputation, and from M. Thouvenel's despatch, finally accepted the cession, and is proceeding to occupy the territory;—and has exchanged his promise of waiting to consult the Great Powers, for a cynical expression of "his "hope that some of the Great Powers will favourably ex-"amine his claim."

He assured our Government that he would not proceed to the annexation except in compliance with, and when assured of the cordial consent of, the inhabitants of Savoy. At first he professed to refer it, as he had insisted on doing in Italy,

to universal suffrage,—and made vast efforts, and very unscrupulous ones, as we know, to get up demonstrations in his favour. When all these failed, and the real sentiments of the people were unmistakeably manifested *against* the annexation, he coolly wrote to Cavour to say that an appeal to universal suffrage was quite unnecessary, and that it would suffice if the municipalities only were consulted.

Lastly,—he assured us that, at all events, the guaranteed neutrality of Chablais and Faucigny should be respected, and even, we believe, went so far as to agree that they should be annexed to Switzerland—at least he *intimated* as much. He now coolly turns round, rebukes the Swiss Government in no very courteous terms, for protesting against the absorption and violation of this neutralised territory; and declares, without the shadow of fact to warrant the assertion, that he had, indeed, *intended* to cede those provinces to Switzerland, but that Savoy objects to eing divided, *will not allow him to keep his word*, but insists pon being swallowed whole!

Now, it cannot be disputed that such repeated violations of his plighted promises show little respect either for the opinion of Europe or for that of our Government; and the naked cynicism of his recent language in announcing these violations, shows still less. In fact, it cannot be characterised otherwise than as insultingly contemptuous. Scarcely less so we think (by the way) is his conduct in reference to the export of rags from France. It is represented to him that the prohibition to export to us the raw material of paper was scarcely in harmony with a treaty by which we agreed to admit French paper to unlimited competition with our own. He at once admitted the force of the plea, and authorised Lord John Russell to say—amid the cheers of the House at the Emperor's cordiality and ready perception of the demands of justice—that he would recommend to the Chamber the immediate repeal of the prohibition. He has kept his word: the prohibition has been repealed, and *a prohibitory duty has been imposed instead!*

THE NEW SAVINGS BANKS.

The endless discussions respecting the Savings Banks, and the many unsuccessful attempts to legislate upon them, are but instances of the difficulties into which a Government inevitably falls when it is induced, from motives, however excellent, to engage in trading transactions. In this case, we have little doubt, the Government were justified in doing what they have done. The Savings Banks were placed under a Government control in the year 1817, when the banking system of the country was very slightly developed in comparison with what it has since become; when very much money was hoarded by the people; when it would have been difficult to induce the owners to part with those hoards, without some semblance of a guarantee from the State. But, however this may be, the attempt which has been made by the State to carry on a banking business has been attended with *two* great inconveniences.

First. The Government is subject to the characteristic inconvenience of the banking trade, without having the means which ordinary bankers have of meeting that inconvenience. For the most part, money accumulates in the hands of bankers only. When money is plentiful, "securities" are usually at a high price; and, as a rule, investments made at such periods are dear and costly purchases: on the other hand, money is demanded from bankers in times when it is scarce and valuable,—when there is anarchy or discredit, or when, from its high value in the general market, its owners are induced to believe they can make more of it. In consequence, the use which a banker can make of much of the money in his hands is very limited. He can only lend it in such a manner, upon such securities, and to such persons, as will ensure its repayment, or, what is even better, discount bills which fall due periodically, and at the maturity of which his money is certain to be returned to him. If, on the contrary, he purchase Consols or any other security that is permanently in the market, he is nearly sure of having to buy in dear times and to sell in cheap times; and must incur very heavy losses not unfrequently. But a Government have found it impossible to take this precaution. They cannot discount bills, or make loans on securities in the open money market. They are, in truth, holders of *temporary money cut off from temporary investments.* With these considerations before us, we shall not be surprised to learn that there is a very serious deficiency in the Savings Banks accounts; that the assets which are held by the State, are not, properly speaking, worth the money deposited with them.

The practice of the Government has tended rather to aggravate than to diminish the evils of their position. Not content with being unable to employ their money in the same manner as a banker, they have taken a different method of obtaining money from that of the bankers, and a less wise one. An ordinary banker gives a varying rate for money, according as he expects to make much or little of it. The Government gives the same rate at all times. In consequence, there is a temptation to lodge money in the Savings Banks when money is low, when the value of it is less than the fixed rate, and to take it away when it is high, and when the value is greater than that fixed rate. The result has been that the Government, in the period from 1819 to 1857,

	£	s	d
Paid interest amounting to.....	28,852,013	8	5
Received dividends amounting to.....	26,077,961	19	2
Excess of interest paid.....	2,774,051	9	3

Secondly. The Government have for years been in a great diffienlty even with respect to investments which one would, at first, have thought they might safely make. That the Government are excluded from the general money market is certain, but we should have thought they might invest in their own securities, their own stock, and their own Exchequer bills, when they pleased and as they pleased. But many persons object to this. They say, if we allow the Chancellor of the Exchequer to have a large moveable fund in the money market, we allow him to have an indefinite means of controlling it: if we permit him to buy and sell different securities when he thinks fit, he may at any moment sell 1,000,000*l* stock and buy 1,000,000*l* Exchequer bills if he chooses, with corresponding results as to the price of the two. By such an arrangement you give to an officer of State, who has at certain crises a great interest in managing the money market, the means of managing it. This is, in truth, but another inconvenience of the Government's undertaking to be bankers for the people. *If* they are so, it seems hard they should not make the most profitable use of the money they safely can. Yet if they do so use it, if they transfer from one sort of security to another sort, there is an immediate cry of "stock-jobbing," and the sure result is immediate unpopularity.

The authority which the existing Acts have conferred on the Commissioners for the management of the National Debt, who likewise manage the Savings Banks, has, however, gone further than this. They have power not only to buy and sell stock, and buy and sell Exchequer bills, but likewise to *fund* the latter when they please. They can thus turn into stock, which represents the permanent debt of the country, Exchequer bills, which represent its temporary obligations, at their own pleasure, and without consulting Parliament. The unpopularity attaching to the occasional exercise of this anomalous power has inevitably augmented that which has been incurred by the use of the natural power which the Government, now that it is a banker, should possess, of varying the securities in which to invest.

The Bill now brought in by Mr Gladstone does not profess to cure these defects in the Savings Bank system, for the greater part of them are necessary consequences of the position in which the State has placed itself. It attempts to apply a few palliatives, and nothing more.

With respect to the great loss already incurred, that *has* been incurred, and nothing which we can now do will alter or amend it. It is proposed, however, that the accounts of the assets held by the Commissioners should be, in future, made out differently. The following sums of stock:—Three per Cent. Consolidated Annuities, the capital sum of 893,017*l* 6s 6d; Reduced Three per Cent. Annuities, 4,763,015*l* 11s; New Three per Cent. Annuities, the total capital sum of 16,306,710*l* 1s 5s; now standing in the Commisstoners' names, are to be cancelled, and a credit of 31,000,000*l* is to be opened in their stead. This does not in any way cure the past loss; it is only a convenient mode of stating the accounts, so that in future we may see that we do not get worse. For the future a balance sheet is to be laid before Parliament annually, showing the liabilities of the Government in respect of the Savings Banks, and the

surplus or deficiency. If the large deficiency which at present exists were fully disclosed by the accounts, there can be no doubt that in every year the amount of assets held would be very insufficient. But in the way in which the account is proposed to be stated, the State deposit account will form an asset of 31,000,000*l*, although the securities cancelled may be of much less value. The deficiency, therefore, annually shown by the account will always be moderate, and it is possible that there may sometimes be a surplus, In making out the balance sheet all securities are to be valued at the price of the day, and, if there is a deficiency, it is either to be paid in money to the Commissioners from the Consolidated Fund, or Exchequer bills to a corresponding amount are to be created and lodged with the Commissioners, or the amount of the State deposit account is to be correspondingly increased. If, on the other hand, there should be a surplus exceeding half a million, securities to that extent are to be cancelled,—either stock is to be annihilated, or a part of the State deposit account is to be written off.

The principal object of these provisions is to prevent the increase of the deficiency which has occurred. But we question whether they are very well calculated to produce that result. No good banker values his securities at *the price of the day*. He values them at such a price as he thinks it probable he will be able to sell them at when he does sell them. Consols may be 100*l* to-day, but if they are to be 80*l* when you realise, their momentary value is entirely unimportant. These constant valuations at casual prices will not really tend to put the Government into a stronger position, except in so far as the value of the money paid to the Commissioners and the securities delivered over to them shall be greater than that of the saleable securities cancelled. To whatever extent the Chancellor of the Exchequer gives money or available money's worth to the Commissioners of Savings Banks, to that extent the real position of the State with respect to those Banks has improved. The State has in that case paid so much money, and that in the simplest way of improving the position in which it stands.

We own we think it would be better, if the subject is to be legislated upon at all, that Parliament should fix a value at which they deem it expedient that Savings Bank securities should stand, and that a sum of money should be laid by every year to reduce the value at which the present securities stand, step by step, to that sum. We are afraid that this will rather frighten people; but still it is the most fair and reasonable method—the method which good private bankers in similar circumstances would undoubtedly adopt.

In this point of view, we think it dubious whether the creation of a State deposit account, in which stock worth only 28,962,742*l* 18s 11d is inscribed at 31,000,000*l*, is advantageous or not. We think it tends to veil the amount of our past loss from our eyes. Some speakers on the second reading seemed to think that it placed our liability in a clearer form. But this is a mistake. The State deposit account is an asset, not a liability—it takes the place of unredeemed securities. What Government have to pay is the money they have received, and the substitution of a "deposit account" for so much stock does not make this more clear, though it renders *less* clear than it was the amount of the loss incurred by the purchase of such stock. The creation of the deficit account will have a great subsidiary advantage. It will withdraw from the Bank of England a large amount of stock on which they used to get 300*l* a million. This charge will now be saved to the public. But the greater part of that charge would also be saved if the new asset, the new deposit account, were valued at the price which the stock for which it was substituted would probably have yielded.

With the same view of preventing the existing deficiency from augmenting, the present Bill contains a further provision which permits the Commissioners to invest the money of the Savings Banks not only in stock and in Exchequer bills, but likewise in other securities guaranteed by the English Government which may bear, as many of them do, a higher rate of interest. As to the excellence of this provision there will not, we think, be any difference of opinion. It is very desirable that the money of the Savings Banks should be employed as profitably as is consistent with safety; and though these guaranteed securities are not so saleable as Consols in moments of extreme monetary difficulty, yet they are in general fairly saleable. The Bill provides that three-fifths of the securities held shall be either stock or Exchequer bills, or some similar security; and that is a sufficiently large proportion for all practical purposes of the *most* saleable assets.

We are not equally certain that the framers of the Bill have acted wisely in permitting the funds of the Savings Banks to be employed in advances to the Exchequer Loan Commissioners. The latter are, as our readers know, empowered to lend the funds at their disposal to companies and others engaged in important and useful undertakings. They have a charge on these undertakings as a security, and if we allow the money of the Savings Banks to be lent to the Exchequer Loan Commissioners, we, in reality, allow it to be lent on the security of these mortgages. We scarcely think this is an expedient employment of such funds. The Exchequer Loan Commissioners may properly advance to many undertakings which will ultimately be remunerative, but of which the debentures are not very saleable (if, indeed, they were very saleable, the undertakings would not require the aid of the Commissioners); and we think it questionable policy to allow the money of the depositors in Savings Banks to be lent on securities so inconvertible.

Such are the provisions of the Savings Bank Bill as to the first inconvenience which we mentioned. As to the second, it does not do much. With a single exception, it leaves the discretion of the Government as it found it. On this subject, some members who spoke on the second reading, do not appear to us rightly to apprehend the difficulty of the question. The power to transfer the Savings Bank money from one security to another is not free from objection. It *is* a great anomaly that the Government should operate in the stock market; it may be an inconvenience that it should operate there on a large scale. But if the Government are to be bankers, can it be otherwise? Is not a power to *vary* his securities necessary to a banker? Is it not a greater anomaly to say to a banker, you shall buy our stock when you please, but you shall only sell it when we please; you shall not make any transfer from one kind of security, whatever may be the state of the money market, however powerful may seem the reason for it, however certain may be the profit by the change, however certain may be the loss by remaining as you are. We do not think it would be wise so to fetter the discretion of the Executive Government. It would be especially inconsistent with the object of the present Bill. It is, as we have seen, proposed to extend the class of securities in which these funds may be legally invested; we are going to take a class of securities not *quite* as perfect as Consols. It would be absurd to enact that if we do take them we must keep them,—that, having made an investment in a rather miscellaneous class of securities, we must retain it, whatever be the prospects of the money market, and however much all the material circumstances that induced us to make the investment may have varied.

The Bill, however, proposes to place a limitation on the anomalous power of funding Exchequer bills which we just now mentioned. It does not propose to abolish it, but it restricts it. There are three great classes of Exchequer bills—Deficiency bills, Ways and Means bills, and Supply bills. We have not space at present to distinguish the peculiarities of the three, nor is it very material. The principal distinction is, that the two first are of a much more temporary character than the third. Ways and Means bills and Deficiency bills are issued with a reference to the peculiar circumstances of the quarter, and are in general cancelled at the end of it. Supply bills, on the contrary, are exchanged year after year for many years, and as the unfunded debt never goes below a certain minimum, may, to the amount of that minimum, be said to form a fixed and invariable part of the obligations of the nation. By the Bill before us, it is proposed to confine the power which the Government now has, of funding all classes of Exchequer bills, to the permanent class—the Supply bills. This certainly obviates very many objections to the power. When the mere temporary classes of Exchequer bills are funded, there is an evident and certain addition to the permanent debt of the country; when Supply bills are funded, it may reasonably be said that the operation reduces the amount of the unfunded debt as much as it augments that of the funded debt. We do not, it may be argued, increase our fixed

obligation; we only change one species of fixed obligation for another. But, on the other hand, it seems very dubious whether there is any very good reason for this anomalous power; it does not seem essential to any banking operation; it breaks in on the constitutional rule that the funded debt of the country can only be increased by the authority of Parliament. Unquestionably, however, the limitation proposed by the present Bill is a wise one; it was contrary to all principle that *very* temporary obligations should be changed at the mere will of the Executive Government into absolutely permanent ones. What is done is good, though there is ground for doubt whether something more should not also be done.

The following are the first two clauses of the Bill to which we have referred above:—

I. The Commissioners of Her Majesty's Treasury shall, as soon as may be after the *passing this Act*, by warrants under their hands, direct the Governor and Company of the Bank of England and the Governor and Company of the Bank of Ireland respectively to cancel out of the total amounts of the several Capital Stocks of Annuities now standing at the accounts of the Commissioners for the Reduction of the National Debt for Savings Banks and Friendly Societies respectively such sums of Annuities, to be particularly specified in such warrants, as shall together amount to the sums mentioned in schedule B. to this Act annexed, and thereupon such Capital Stocks of Annuities shall be absolutely cancelled and determined, and all interest or dividends thereon shall thenceforth cease to be payable.

II. In place of the said Capital Stocks of Annuities so cancelled, the said Commissioners of the Treasury shall, by warrant or warrants under their hands, order and direct the Comptroller-General of the Exchequer to record in the Exchequer, in a book to be kept in such form as the said Commissioners shall seem fit, for Savings Banks and Friendly Societies, an Account, to be called "The State Deposit Account, Number One," and there shall be placed at the credit of such account the sum of *Thirty-one million Pounds*, being three-fourth parts or thereabout of the amount due on the Twentieth of November One thousand eight hundred and fifty-nine as aforesaid to Savings Banks and Friendly Societies, and the amount of such State Deposit Account, as it shall stand from time to time under the authority of this Act, shall be chargeable upon the Consolidated Fund of the United Kingdom of Great Britain and Ireland; and the amount of such State Deposit Account, and of all the securities held by the said Commissioners as specifically set forth in the schedule A. not ordered to be cancelled in schedule B., and all the cash and other securities whatsoever, which shall at any time be in the possession of the Commissioners for the Reduction of the National Debt, under the authority of this Act, shall be subject and liable to provide for the discharge of the legal claims of all Savings Banks and Friendly Societies on the said Commissioners.

TAXES ON TRANSACTIONS.

Mr Gladstone has now reached the portion of his Budget which will give him the greatest trouble—the greatest, that is, in proportion to its importance. He proposes to lay certain burdens on the trading community, in consideration of the great benefits he is conferring on them. He says that he is giving a great relief to industry, and, therefore, he may not improperly put a charge upon it. As he will much improve the productiveness of labour, that charge will, he hopes, be borne easily. However this may be, he will probably find, indeed he has already found, that industry is quite as ready to remonstrate against the burden to be imposed as it is to receive the relief that is granted.

We do not intend, on the present occasion, to go through the whole list of the charges which the Chancellor of the Exchequer originally announced to us. It is unnecessary to do so, because it is well known that some of them will be subjected to great modifications. We only intend to call attention to one or two points of principle which are important on this subject, and to illustrate them.

First, any tax which is imposed upon trade should be an equal tax. It should press, that is, equally on all classes of traders. The reason of this is evident, and requires no elucidation. There is no reason for taxing one trader at a greater rate than another, any more than there is for taxing one non-trader at a greater rate than another.

Secondly, it follows from this principle that if any tax is imposed on a single class of traders only, it must be such a tax as they can conveniently and easily transfer to the consumer.

Thirdly, if the new tax is to be transferred to the consumer, it is of very great importance that it should be transferred without addition. When a charge is of uncertain amount, there is great danger that the particular man of business, who in the first instance bears it, will to be quite sure that he does not bear it in the end, form some vague but excessive notion of its magnitude, will make that estimate an element in the price of the article he sells, and will thus mulct the consumer of it more heavily than he ought.

Fourthly, it is of great importance that any taxes imposed on trade, being necessarily specific duties on particular transactions, should not be of sufficient magnitude to check those transactions. This principle, likewise, only requires to be stated. No one desires less than Mr Gladstone to put any heavy burden upon trade.

These general principles seem, however, to condemn certain of the taxes which have been announced. In the first place, they condemn all the taxes on the operations that have grown out of the warehousing system. These charges do not fall equally on all classes of traders, for many traders never use the warehousing system, never could use it, do not know of its existence. On the other hand, there are minute and uncertain charges which it will be difficult to throw accurately on the consumer. Either the merchant will not charge enough or he will charge too much. Great accuracy is not possible. Practically, a rough system of averages will be formed; the trader will assume that he bears such and such a burden; but, upon the general principles of human nature, it is scarcely possible that in the end he should not over-estimate it. If he does over-estimate it, the consumer will have to pay a larger sum than the Government receives. We may observe, too, that the trader has the difficulty, often the insuperable difficulty, that he has to make an appreciable addition to the price of the article he sells, in consideration of charges of which each one is small, though the aggregate of them is not inconsiderable. In many cases he may have to bear these charges for some time before he can throw them on the consumer. But either way there is an objection to the tax: if a series of petty expenses like these is thrown upon the consumers, it is nearly sure to be over-valued, and the consumer will bear more than he ought; and if, on the other hand, the tax cannot be shifted to the consumer, the trader will have to bear it, and will find it a serious burden.

It is, however, sometimes contended that traders should bear these taxes upon the details of the warehousing system because that system is an advantage to trade. But the warehousing system is *not* in itself an advantage to trade. It is only a palliative to some evils which legislation has created. We have imposed certain taxes on certain commodities, and to enable the merchant more easily to pay those taxes we allow him to defer the payment until those commodities are taken out for actual consumption and sale. We keep them in a bonded warehouse until that period arrives. But if there were no duties there would be no need of this apparatus. We have by our fiscal system placed commerce in a difficulty, and we have invented an ingenious expedient to diminish that difficulty. But we must not speak of this expedient as a positive boon to trade; it is only a partial cure for an inconvenience which we ourselves caused.

There will likewise be a considerable difficulty in adjusting the penny tax on every package exported or imported. This will necessarily be a light burden on costly articles which are exported or imported in few packages, and a heavier tax on cheap articles exported or imported in many packages. The real burden will increase with the number of the packages, and will diminish with the value of the articles they contain. This certainly is not very equitable; the tax will fall unequally on different classes of traders, and no one can tell how much of it will be passed on to the consumer. Still the tax will not fall very grievously upon any one, and in matters of taxation we must be very careful not to push principles to an extreme, since if we watch anxiously for minute objections we shall get no money at all.

PLURALITY OF VOTES: THE TRUE PRINCIPLE OF A REFORM BILL.

All parties admit that the growth of wealth, intelligence, and population requires a large addition to be made to the number of electors. This is the thing to be done. How to do it with efficiency and safety is the problem which we have so often recently considered, first from one, then from another point of view.

The Government Bill is a Legislative proposal destitute of a principle on a matter which, of all others, most needs a clear principle. It ignores the character of the present crisis and the peculiar danger which the Bill of 1832 has handed down to the present generation.

In 1832, the constitution of the House of Commons was strongly condemned by public opinion. Powerful interests had sprung up in the country, which were inadequately represented in Parliament. Many of our largest towns had no members. Still more, there was a most vexatious obstruction to legislation. Many urgent reforms were eagerly demanded, and could not be obtained. Reforms in the Church, reform of corporations, commutation of tithes, reduction of the pension list, abolition of slavery, repeal of the Corn Laws, repeal of the Navigation Laws, removal of religious disabilities, and, generally, the preference of the interests of all to those of the few, were warmly asked for and successfully resisted. A combination of a few particular interests had brought Parliament into thorough discord with the country.

The result was extreme irritation, and a resolute determination in the people to have a Parliament of a different kind. The House of Commons was carried by storm, and every part of the old machinery of Government which seemed to be obstructive, without much regard to theory or the future working of the change, was swept away.

In 1860, there is nothing of the sort. Parliament has no accuser, except Mr Bright; much less is it condemned by the feeling of the nation. It is not charged with selfish indifference to the public welfare. It is not even hinted that any measure deliberately desired by the country runs any risk of being rejected by Parliament. The House of Commons is in harmony with the nation. It is simply felt that new classes have become qualified by wealth and intelligence to demand a share of political power. Their desire is recognised to be just and reasonable. Their exclusion, it is known, would end in danger. There is no pressure, no violence; but the necessity of admitting these new classes to the franchise, and of adopting some carefully considered principle for their admission, both now and in the future, constitutes the present period a real and very solemn crisis in the history of this country.

The proposed Reform Bill, it is evident, does not perceive the true nature of this crisis. There is no sign that the magnitude of the problem is understood,—no indication that it is felt to require the highest political science and care for its solution,—no evidence that a general principle has been sought, and, when found, adopted with a full consciousness of its importance. For the first time the Government and Parliament are summoned to frame a deliberate rule for the future expansion of the suffrage consistently with safety to all that is valuable and great in the institutions of England. On them this momentous duty devolves; but there are no signs that, as men of business, they are having recourse to the highest political knowledge to guide them.

The Bill overlooks the peculiar danger introduced by the Act of 1832, and thoughtlessly turns a subordinate provision into a permanent principle. In 1832, a uniform monied franchise was substituted for variety of franchise. Election by purchase, by corporations, by the influence of great families, by freemen, by universal suffrage, was abolished: a uniform franchise of a 10*l* house filled the gap. This was done under the pressure of an impending revolution without much reflection, and has been unproductive of harm hitherto; but if the Government proposal passes without any corrective machinery, a uniform household suffrage will be sanctioned as the rule of the constitution, and not the incorporation of new citizens into the State, but the transfer of Government to the hands of the poor, the untrained, and the ignorant, must be the inevitable result.

The old variety of franchise, in a rough, practical way, secured the predominance of property and education;—a uniform household franchise will make mere numbers the masters of the nation. A reduction of the franchise to 6*l*, if unaccompanied by any balancing principle, must make all future changes purely questions of degree. 6*l* will in time become 4*l*, then 2*l*, till at last the occupation of a house, and probably universal suffrage, will be the rule.

It is this thoughtlessness, this absence of any principle which guards against the absolute supremacy hereafter of mere numbers, which fills all thinking men with alarm. The Bill establishes equality of votes, the equal competency of all men alike to wield an equal amount of political power: it pronounces that an educated man, compared with a mechanic, has no inherent superiority of qualification to legislate or to govern. It declares, that, though to plough a field or to make a machine are matters of skill and science, to discern a fit legislator and a good ruler requires no knowledge of politics or statesmanship; and that the talents and attainments of the lowest peasant and mechanic are the measure of the electoral capacity of the most educated man in the land.

This assertion is so glaringly false, that no one has dared to make it; yet it is the foundation of the whole Bill; it is the guiding principle which will determine the ultimate state to which this Reform Bill will bring England.

One mischief involves another. Equality of votes in the same borough must generate representation by electoral districts. If all voters are equally competent for the franchise, they are clearly entitled to equal shares of political power. Instead of unequal counties and towns, uniform amounts, not of property but of population, will become logically and practically represented by equal numbers of seats. We thus arrive at unbalanced universal suffrage; and here, we contend, we shall at last be certainly landed by this Reform Bill.

This tremendous revolution, we are quite sure, is not intended. It is mere thoughtlessness, want of earnestness to think out a safe scheme and courage to face the charge of novelty, which is the source of the mischief. The enfranchisement of new classes, not the disfranchisement of the old constituencies effected by this Bill, is the object desired. It is grievous to see this great and noble country exposed to so fearful a peril, because our statesmen will not be at the pains to seek instruction, either from history or our own institutions. We have before pointed out in these columns that the problem before England is the same as presented itself in ancient Rome to the legislative genius of Servius Tullius. He solved it with complete success by the Roman House of Commons, the Centuries; and he formed a working constitution which, for many ages, combined universal suffrage with the reasonable preponderance of property. He divided the Roman people into five classes, according to property. To the first and richest, and consequently in numbers much the smallest class, he gave 80 centuries, or seats, out of 195; the fifth, the poorest and by far the most numerous, obtained 30 centuries, or seats. Every Roman had a vote; but the votes were not all of equal value.

The same principle is successfully at work in England already. In the election of poor law guardians, plurality of votes, known by the name of Sturges Bourne's principle, graduated according to property, is established. In spite of timid cries of impracticability, we have always steadily asserted that no reason can be assigned against the adoption of this principle in political elections. At present, of course, we cannot hope to see it adopted. Members of Parliament have not the courage to advocate it, even in the very modified form in which, in concert with Mr Hare, we urged it last week. The public and the House of Commons have not yet been familiarised with it in the election of members of Parliament This alone, we believe, accounts for the strange fact that it has never received any consideration in Parliament.

Yet this principle meets every requirement of the problem. It directly destroys the source of all the danger,—equality of votes for each elector. It roots out the false doctrine that all men are equally qualified to choose members of Parliament. It stands upon the doctrine implied in the essential organisation of Parliament,—counties and boroughs of varying size. It ratifies this doctrine, as not an anomaly, but a political truth. It averts the fearful peril of the supremacy of vast masses of homogeneous electors, of men all animated by a common feeling, possessed of one single common interest, enrolled into a common organisation, and yielding a common blind obedience to a central irresponsible committee. It bars out the ruin threatened by hundreds of members being the mere nominees of a Union centralised in London. It makes the most liberal extension of the franchise desirable, because at once just and safe. It will arrest the demand for incessant Reform Bills, by furnishing a perpetual self-acting Reform Bill. It will enable the franchise to be safely given to every

man who commences to acquire property; and will directly reward industry and thrift by an ever-increasing share of political power. It will thus enlist every man in support of the constitution. It will reconcile all classes into one harmonious nation, and render impossible the domination of any single one. It will assimilate the new elements of England's growth into the old constitution, and give her an unclonded prospect for the future.

We are aware how the arguments which for the last three years we have never ceased to urge on this subject are received. They are called impracticable, *doctrinaire*, theoretic, and by all other names by which thoughtless and unwilling minds express their dislike to complicated and statesmanlike considerations. Still we deem it our duty to urge them again and again. When a clear and just principle is distinctly visible, to ignore it in deference to the impatience of popular cries seems to us to abdicate the highest functions of a journalist,—as we think that those great and eloquent Parliamentary leaders who have lent their authority to this bill abdicate the highest functions of statesmen when they consent to follow instead of leading public opinion,—when they shrink so sensitively from the commonplace blame of being opinionative and *doctrinaire*, that they lend their sanction to measures the certain ultimate *tendency* of which they lament and do not approve.

NAPLES AND ITS PROSPECTS.

While the future of Northern Italy is apparently growing steadily brighter, the future of Southern Italy is,—we will not say growing steadily darker,—for a darkness so gross as that of Rome and Naples nothing can thicken or deepen,—but looking more and more hopeless in comparison with the sister kingdom in the North. The correspondence just laid before Parliament with reference to the affairs of Naples might, indeed, to an inexperienced eye, seem to contain some signs of better things. If wide-spread and deeply-rooted discontent,—if the sullen temper of almost all classes, high and low, the suspicious distrust of apparently amnestied exiles, the indignation excited by promises withdrawn as soon as made, the weakness caused by the open disapprobation and discontent of powerful allies, or any other such signs of an approaching crisis, are considered as good omens in a State, where no change could be a change for the worse, such omens, no doubt, there are in sufficient abundance. But though the omens of a storm may be welcome to the sufferers from the feverish and breathless atmosphere of a tropical calm, yet it is only because every storm brings with it at least a chance of relief from the pressure of those burning and overpowering latitudes. Is this so with Naples? We doubt it extremely. Elements of confusion, no doubt, there are in ample abundance, but elements, even the rudest, of a new order,—an order that can withstand at once anarchy and despotism, we cannot see.

We cannot conceal our belief that there is no clear centre about which the constitutional party in Naples can rally with any hope of success; and without such a centre, we fear that all movement which merely betrays the disaffection of the people to the Government will give new grounds for oppression and new zest to the party who wield the powers of oppression. The despatches before us sufficiently prove that the young King of Naples and his Minister, M. Carafa, are aware of the very great advantage of the position which they occupy. They amuse foreign Powers with the outward semblance of a concession and a lenity which is as far as possible from their thoughts. They listen to Mr Elliot with decorous interest while he represents the views of English statesmen,—acquiesce in his general assertions, humour him with compliments and the promulgation of mock reforms,—instruct their own agents within two or three days that these reforms were never for a moment seriously intended by the Government, but were rather meant to be construed as a hint to pursue the old system more vigorously than ever; and then, when Mr Elliot remonstrates, talk to him of the "great practical difficulty of their position," the necessity for caution, and, in fact, send him away with the humiliating sense that he is the laughing-stock of the despotic party, and utterly without power to resent the practical insults put upon him. This is the game which the Neapolitan Bourbons have been playing for many years past with the representatives of England and France. Their laws ar completely suspended,—the administration of justice i scarcely better than it was in Oude under the late dynasty,— the whole power, legislative and municipal, is at the disposa of the throne,—the army is entirely without leaders possessin authority and courage enough to wield its overpowering in fluence so as to secure the national rights,—and is, there fore, as the tool of the Government, the most powerfu instrument in preventing the assertion of those rights. I short, Naples is governed by pure terror, and there is no on definite point to which the wishes of the moderate Liberal turn. England and France have lost all influence for good since the failure of their empty threats a few years ago, an probably each of them now contributes something to th difficulty of the situation for the Liberal party; France, be cause she is known to disapprove, even to the point of inter dicting, the wish of the constitutional party for a union wit Sardinia and Northern Italy,—England, because it is gener ally believed, at least, that she would disapprove of any recal of the Murat family, which furnishes the only precedent for a separate constitutional government of Naples. France i jealous of the growth of Italian power, and so will not hea of any union between Northern and Southern Italy; Englanc is jealous of the growth of French power, and is indisposed t hear of any extension of Bonapartist influence in the Italiar Peninsula.

All these circumstances tend to render the prospects o Naples dark in the extreme. We must never forget tha the political condition of that Kingdom now differs in many im portant particulars from that of Central Italy before the war,—and in all respects for the worse as regards immediate prospects. In the first place, Parma, Modena, and the Romagna were, before the war, nearly in the same relative position for asserting their liberties in which Lord Macaulay says that England was placed in the 16th and 17th centuries as compared with continental nations. They had little or no native standing army, and hence (except in case of actual foreign occupation) the State had to look to the people for support. It was obliged to take into account, to some extent, the wishes of the people. The same thing was more or less true of Tuscany. The Archduke had but a small army, and not one on whose support he could count with any confidence. He did not, indeed, pretend to govern constitutionally, but he did attempt to prevent the people from feeling the want of a constitution, —to lull them into a secure repose. But Naples has a large standing army, and though in the main a native army, yet an army not likely to show disaffection unless its leaders and officers were all to unite in a disloyal movement. The Government of Naples, therefore, can dictate terms to the people, limited only by the fear of disgusting the army also with its conduct.

But next suppose a movement initiated and the army taking part in it,—for what are the constitutional party to contend? First and foremost, no doubt, for the deposition of the Bourbon dynasty, of which the last scion appears to be even worse than his predecessors. While the family of the Bourbons remains, there can be no hope of improvement. Faithless, cunning, savage, and treacherous, they delight in making promises to the ear which they are at the moment devising means to break. But this once settled, what is to come in their place? 1848 sickened Europe of extemporised republics; and the history of the last year has sufficiently proved the paramount importance of keeping to a clear and defined constitutional path. Moreover, even in the case of Central Italy there would have been no movement but for the overpowering aid given by the French troops. This it was that drove back the interference of Austria, and this, or something equivalent to it, would also be needed to neutralise the Royal and Papal influence in Naples. The population of Naples, it must be remembered, have been thoroughly disarmed,— excepting those dangerous classes,—the lowest of the Lazzaroni. These lowest of all Royalists have been armed by the Government, and kept at the call of the municipal police,—and at a very short notice they would be up in arms on the King's side. On the other hand, all the labouring classes who have no such retainer from the Government have been sedulously deprived of weapons, even of swords,—and at the first charge would be mowed down entirely. Hundreds of these labourers are amongst the

political prisoners,—and some intervention from outside would be absolutely needful in order to rouse, arm, and unite them. No movement in Naples that is unsupported by any foreign Power can at present succeed. There is no rallying point for the Constitutionalists within the kingdom. The recall of the Murat family would need the support of France; the cry for union with Sardinia, some more powerful external aid still.

We hold, therefore, first, that no effectual rising could take place at present within the Two Sicilies,—certainly not in the Peninsular Kingdom,—without some nucleus of foreign troops to take the initiative, to distribute arms to the unarmed Liberals, and to lend the moral support of an external State. And we further hold, that if such a rising could take place, and be at first successful, it would still be next to impossible to settle the great question of the new Government without bringing down a veto either from France, who grudges Sardinia every new subject,—or from other Powers of Europe, who grudge France her Italian influence. And, were an unsuccessful rising to take place,—as is evidently likely enough,—the result would be, as it always has been, a fresh accession of strength to the present Government of Naples. The Government would point to the insurrection as the justification of all its harsh measures, and not even affect any longer to screen its iniquities under the forms of alse amnesties and mock trials.

THE INDIAN BUDGET.

Though the details of Mr Wilson's views on Indian finance, as explained in his speech in the Legislative Council at Calcutta on the 18th February, have not yet been received, since the intelligence concerning his proposed Budget has as yet reached us only in the summaries from Bombay, still the main outlines of the practical measures proposed are now known and generally approved both in England and in India. Mr Wilson's speech showed, we believe, that the accounts transmitted in September gave (quite unintentionally) a much more favourable view of the finances of the current year than is justified by fact.

According to these accounts, the deficit in India was reduced to 2,651,143*l*, and, including the home charges, to 6,499,981*l* for the current year. Mr Wilson showed that the real Indian deficit was 4,060,809*l*, and, including the home charges, was 9,016,909*l*. He had, then, more than a 9,000,000*l* deficit to cover.

The outline of his proposal for this purpose we extract from the *Bombay Gazette*:—

On Saturday, Feb. 18, Mr Wilson rose in his place in the Legislative Council to make that statement about which England and India have been vainly speculating for the last six months. The demand for tickets to be present on the occasion seems to have been quite unprecedented in Calcutta; and, indeed, the people of the metropolis are now beginning to enjoy something of the excitement of parliamentary life. No detailed report of Mr Wilson's speech has yet reached Bombay; but from telegrams received by the Government and by ourselves, we are enabled to place the following abstract of the Budget before our readers. The proposed changes in Customs duties were notified in a *Government Gazette Extraordinary*, published at an early hour on Monday morning, the 20th instant. This we here subjoin in full:—

Imports.

All twenty per cent. duties reduced to ten per cent., except duty on tobacco.

Cotton thread, twist, and yarn, raised to ten per cent., but proved contracts of goods actually at sea to be admitted at five per cent.

Tobacco duty to be eight annas a seer on unmanufactured tobacco; one rupee a seer on manufactured tobacco.

Exports.

The duty on saltpetre to be two rupees a maund.

The following articles to be added to the free list:—

Imports, Free.

Wool, flax, hemp, jute, maps, prints, works of art, and hides.

Exports, Free.

Wool, flax, hemp, jute, hides, tea, and coffee.

Direct levy of Customs duties on Monday next, the 20th inst., at all ports, according to the above alterations.

By order of the Right Hon. the Governor in Council,
B. H. Ellis, Acting Secretary to Government.

Bombay Castle, Feb. 20, 1860.

So much for the indirect taxes. In the way of direct taxation, we are to have both a licence tax, in name the same, but in reality totally unlike that memorable tax which Mr Harington proposed, and which nearly caused another rebellion, and a regular income tax. The licence tax will be levied as follows:—Artisans, 1r per annum; retail dealers, 4r per annum; wholesale dealers, 10r per annum.

The income tax will be thus imposed:—1. All incomes below 200r go free. 2. Incomes between 200r and 500r pay 3 per cent. 3. Incomes above 500r pay 4 per cent.

The additional 1 per cent. on first-class incomes will be devoted to public improvements. The zemindars of Bengal (as well as, of course, the fundholders and civil servants) are subjected to the tax.

The prayers and remonstrances of the Civil Service have prevailed; and Mr Wilson, as was anticipated, has declared that he does not consider the expense of the service can be reduced. He, however, thinks the European army now maintained in India far too large; and purposes to economise in expenditure by incorporating an efficient police to discharge many of the duties which are now left to the military to perform. In conclusion, the Finance Minister tells India not to look to England for help, but to rely on herself. The Treasury, he intimates, is full of cash; no new loan is likely to be required for a long time to come; the introduction of a paper currency will increase the means and provide for the security of trade; and, with her whole financial system thoroughly restored, India has no right to ask from England a guarantee of her liabilities.

Such is a summary of the first good budget that India has had. It has met with general favour, and will, we venture to predict, pass into law without opposition.

M. MICHEL CHEVALIER.

The Emperor of the French has been exceedingly fortunate. He has had an opportunity of showing his attachment to the principle of free trade, and at the same time of conferring a distinction on one of the few men of acknowledged merit who adhere to him. In consideration of the eminent services he has rendered to France, both in the conclusion of the recent Treaty with England and at other times, the Emperor has conferred on M. Michel Chevalier the rank of Senator. It is not needful for us to speak of M. Michel Chevalier's merits—they are known wherever the principle of free trade is known. When there was nothing to be gained by the advocacy of free trade but obloquy and unpopularity, M. Michel Chevalier advocated it; and it has given great pleasure to the adherents of the true principles of political economy throughout Europe to hear that at last the advocacy of them has become a title to honour, and that the person who receives that honour is the person who was most zealous on behalf of the truth, when it was not probable that the Ruler of France would soon be on its side.

Agriculture.

AGRICULTURAL PROGRESS IN FRANCE.

Every day produces some points of interest in reference to the progress of husbandry in France. The plans of the Government for the improvement of the communal lands—analogous to our inclosures of commons and common fields—will bring, it is said, into cultivation an area equal to one-eleventh part of the cultivated soil of France, and when the eagerness with which land is sought in that country for purposes of culture is considered, the benefits conferred on the community by such improvements will be sufficiently obvious. The communal lands are at present little better than wastes, or at most mere pasture commons yielding scarcely any profit. Enclosed and allotted, they will become valuable either as meadows and pastures or arable land, or as plantations, and it is by affording examples of what can be profitably done for the improvement of even the least promising soils that the Emperor's own improvements are likely to prove so beneficial. On the Imperial domain in the Landes, the general improvement of which we have on a former occasion referred to, the application of an outlay of 15 francs per acre in planting will raise the value of the land from 84 francs the hectare to 700 francs by the time the plantations are 30 years old. Now let this sort of improvement be carried on throughout the 3 or 400,000 hectares on the Landes now almost without value, aided by new roads, and the necessary growth of a local population, and the importance of the operation will be apparent. And the Emperor's example is already successfully followed by other proprietors. On the domain, each farm homestead with cultivated land has been carefully surrounded with plantation for the sake of the shelter afforded to the live stock and crops against the winds which from time to time sweeps across the Landes. Amongst other trees planted are

the cork tree, which thrives at no great distance from the Landes. No less than 350,000 have been planted on the Imperial domain.

The farm steadings have been planned and constructed on the most simple principles and with moderate outlay. Economy has been carefully studied, while ample provision is made for the comfort of the workmen as well as of the live stock. The animals are well covered, and so is the manure. Anxious to afford a practical example of improvement to neighbouring proprietors, the Emperor has avoided the error into which so many improving landowners in this country fall, of investing a vast amount of capital in expensive buildings which can never give any adequate return for the outlay. The farm-house and buildings of each farm are very complete, and contain every convenience for a farm of the size. The house is placed in front of, but at some little distance from the yard, to which it is open; the buildings form the other three sides of a parallelogram. There is a liquid manure tank with drains from the stables and cattle sheds, and an ample dung pit. The farm steading cost 340*l*=8,000 francs, and the farm house, which is somewhat ornamental, 510*l*=12,000 francs. These sums are rather higher than usual in France, but the district has few inhabitants and the workmen require high wages, while all the materials, except sand, have to be transported considerable distances. Most of the houses are within easy reach of the railway. The cultivated land is at present restricted to 40 hectares =100 acres, with an unlimited extent of grass land according to situation. The fields of 10 to 12 acres each are divided by open ditches with turf walls, on the top of which are sown Pinus Maritima, oak, or acacia, in order that each field may be sheltered as well as drained. Good roads lead from the farm-buildings to each field. Various modes of reclaiming have been tried, but trenching the land deeply with the spade has proved the most successful, but the cost is nearly 300 francs per hectare. Burning the turf has been tried, but the soil being so sandy, such a waste of vegetable matter is not persisted in. Dressings of lime are used and found most beneficial. But the main source of fertility is manure, and all kinds of portable manures are used. The distance from Bordeaux, nearly 70 miles, precludes the profitable conveyance of the large quantities of manure made in that city. Sawdust mixed with the dung has been found to fertilise the land, and with the fine climate of the district large crops of maize, pulse, cabbage, melons, and other Southern vegetables are produced. Oats, wheat, and barley are not grown; rye being the only grain, the crops of which are small. Buckwheat is sown to be ploughed in, and in a few years it is expected the land will become of sufficient staple to grow corn. Turnips and rape have hitherto been much injured by the black caterpillar.

The permanent grass lands are broken up, cultivated for a time, and then laid down with a large quantity of grass seeds, the young grass being manured with farm-yard manure, guano, and poudrette. Experiments are making to convert the natural heathy pastures into meadows without the cost of trenching and cultivating. This is done by cutting the heath and other rough plants, and dressing with lime and manure, and sowing grass seeds and white clover. This is followed by grazing cattle and sheep, and applying ashes. Oxen are used for cultivation, and, as all who have travelled in the South of France know, their oxen are fine large animals, well adapted for the yoke. When all the land has been thoroughly reclaimed, it is intended to substitute mules for oxen. Three pairs of oxen are required for each farm. The sheep kept are the native breed of the Landes, a small and lean black-faced breed, the improvement of which is to be effected by better keep and shelter through the winter. Better breeds would not at present subsist on such poor land. Some mares are kept for breeding mules, for which there is a great demand for Spain, a mule foal seven or eight months old being readily sold at 16*l*. Cotton is being tried with apparent success, and other plants native and foreign are made the subjects of careful experiments.

On each farm there is a steward, two ploughmen, one woman for the kitchen, &c., one shepherd, and two or three labourers, who are paid 2s per day. Ploughmen's average wages are with food from 6*l* to 10*l* a year. Women's wages 4*l* 5s for a year with food. The steward receives 40*l* to 60*l* the year. There is one manager for each seven farms. Two managers have each half of the domaine. They are paid from 100*l* to 150*l*. The whole is under a director. A cashier or comptable completes the whole administration of the domaine.

The Emperor is taking the greatest interest in the improvement of the domaine des Landes. His Majesty has personally made the arrangements in connection with the domaine, and has entered into the minutest details. Every year, when at Biarritz, the Emperor comes to his domaine des Landes to see everything, to give orders for new improvements, and even to give instructions as to the carrying out of the improvements in the reclaiming of the lands.

Besides this domain, the Emperor has bought a morass, distant to the South about 40 miles, 1,045 hectares in extent. This has been drained, and is in process of being formed into ten farms. By this operation the salubrity of the district has been greatly improved, over and above the value of the land reclaimed. These agricultural operations furnish evidence of the persevering and judicious earnestness with which the present ruler of France is seeking to advance her material prosperity.

Literature.

NARRATIVE OF THE MUTINIES IN OUDE. Compiled from Authentic Records. By CAPTAIN G. HUTCHINSON, Bengal Engineers, Military Secretary to the Chief Commissioner of Oude. Smith, Elder, and Co., 65 Cornhill.

THE time has not yet come for writing a complete history of the Indian mutiny. Lesser historical sketches, however, of the forms it assumed within limited areas, are beginning to appear, and to furnish those who have hitherto had, vivid indeed, but disjointed ideas of the events of that great crisis, with a wider and more connected knowledge. One of the best among these miniature histories is the narrative now before us, "compiled with the concurrence of the Government of India, and by the direction of R. Montgomery, Esq., C.S. Chief Commissioner of Oude, with the object of affording to all who may have lost friends or relations in Oude the most accurate and complete information that the local Government has been able to collect." The personal narratives furnished by various officers, of the outbreaks at their respective stations, their own escape, and the murders or escapes of their fellow-sufferers, must, we think, possess a deep interest for more than those who have such painful cause for interest in their perusal. The "necessary links,"—the introductions and fillings-in, by means of which the compiler has woven them into the form of a history of the rebellion in Oude, are written in a straightforward and succinct manner, well adapted to their end. The introductory explanation of the causes that contributed to make the mutiny more deeply-seated among the population of Oude than it was in other parts of Hindostan are clearly given, with the decisiveness of one who was on the spot during all the troubles and himself a witness to their rise and progress. It tallies with our previous convictions that the annexation of Oude had nothing to do with this more widely-spread disaffection, than inasmuch as a country in the course of transfer from one system of government to another is always more exposed to risk of disturbance from exterior excitement or inward discontent, and as the breaking up in this particular case of a corrupt and dissolute court deprived a large number of the most dangerous characters of their accustomed emoluments, and rendered them ripe for every scheme of revolt and revenge.

Another principal cause for the sympathy of feeling between the peasantry of Oude and our rebellious sepoys is of course to be found in the fact that the warlike character of the people, and their existence amongst perpetual disturbances, have made Oude one of the chief nurseries of our native army—soldier and peasant being thus connected by near ties of blood; but there is nothing to prove that the annexation had any perceptible influence in rousing the spirit of revolt in either, though, when once the flame was kindled, it was natural that it should spread from one to the other in a more rapid and dangerous degree than elsewhere.

After a brief survey of the state of Oude at the beginning of the disturbances, Captain Hutchinson goes on to relate its first threatenings in the stations round Lucknow; and the admirable firmness and tact with which Sir Henry Lawrence kept the mutinous spirit in check, while he made almost superhuman efforts for the safety of the English when the storm could be no longer controlled. First in the lists of revolted stations stands Shahjehanpore, where, on the 31st of May, the sepoys rose on the Europeans during church service, massacreing all but a few, who escaped to meet the same fate a little later on at Mohumdee, whither they fled for safety. At Mohumdee, from the time of the arrival of these fugitives, alarming symptoms showed themselves among the troops. "Each man," says Captain Orr, "was civil to me to the last, but each said he could not answer for what some of the bad characters would do." On the 4th of June, 50 sepoys came in from Setapore, with a request from Mr Christian, the Commissioner of that place, that the ladies might be sent to him for safety. These sepoys spread a report among Captain Orr's troops that "two companies of their own regiment had been destroyed at Lucknow for refusing to become Christians." Captain Orr, on hearing this, called together his disaffected soldiers, and asked them "to let him know at once like men, what their intentions were." An open proceeding such as this did not suit, however, with the duplicity and cowardice of the men he addressed: they resolved to get their victims more helplessly in their power before they showed their "intentions." They, therefore, swore to take Captain Orr and his coadjutor, Mr Thomason, safely into Setapore, and to let the refugees leave in peace; and on this security all the Europeans quitted the station on their way to Setapore, attended by the escort from that place and Captain Orr's native troops. We will give the disastrous result in his own words:—

I put as many of the ladies as I could into the buggy, others on the baggage carts, and we reached Burwan at about 10.30 p.m. Next morning—Friday the 5th—we marched towards Aurungabad. When we had come almost ten koss, the halt was sounded, and a trooper told us to go on ahead when we liked. We went on for some distance, when we saw a party coming along. They soon joined us, and followed the buggy, which we were pushing on with all our might. When within half-a-mile of Aurungabad, a sepoy rushed forward, and snatched Key's gun from him, and shot down poor old Shiels who was riding my horse. Then the most infernal carnage ever witnessed by man began. We all collected under a tree close by, and put the ladies down from the buggy. Shots

were firing in all directions amongst the most fearful yells. The poor ladies all joined in prayer, coolly and undauntedly awaiting their fate. I stopped for about three minutes among them, but thinking of my poor wife and child here (at Mithowlee under the protection of the Rajah), I endeavoured to save my life for their sakes. I rushed out towards the insurgents; and one of our men, Goerdon, 6th company, called out to me to throw down my pistol and he would save me, and several others followed his example. In about ten minutes more they completed their hellish work. I was about three hundred yards off at the utmost. Poor Lysaght was kneeling out in the open ground, with his hands folded across his chest; and though not using his fire-arms, the cowardly wretches would not go up to him till they shot him, and then, rushing forward, they killed the wounded and the children, butchering them in the most cruel way. When all was over, Captain Orr obtained a horse, some clothes, and a pass to the Rajah of Mithowlee, and rejoined his wife and child. Here, with some fugitives from Setapore,—the unfortunate Sir Mountstewart Jackson, his sister, little Sophy Christiana, and ten others,—they dragged on a wretched existence, now in a ruined mud fort, and now in the open jungle, until late in October, when the Rajah turned his scanty protection into undisguised treachery, and (instigated by a retainer who owed his fortunes to Captain Orr's kindness in former days) betrayed them to men sent out to fetch them in from Lucknow. Thither they were taken loaded with chains and with every indignity.

Of that fearful march, and the subsequent murder of the men, and hardships undergone by the women of the party during their detention in Lucknow, and of their escape at last by the instrumentality of a compassionate official, one Meer Wajid Allee, and by the gallant daring of Captain McNiel,—a full and minute account is contributed by Captain Alexander Orr.

Setapore, to which the fugitives from Shahjehanpore were bending their steps, had in the meanwhile ceased to be a place of refuge. Mr Christian, the Commissioner, his wife and infant, with twenty-one others, were killed in the first outbreak. Sir Mountstewart Jackson and a few companions escaped into the jungle, reserved for a more painful and protracted fate. Many, more fortunate, met with protection from friendly zemindars and rajahs, and reached Lucknow in safety, after the most exciting perils and wearing fatigues.

The rising at Fyzabad is honourably distinguished by the refusal of the artillery and infantry regiments to consent to the murder of their officers. They "even gave them money, and assisted them in procuring boats to proceed down the Ghogra." Of the four boat-loads of officers who thus embarked, one alone reached a place of safety. The eighteen persons filling the other boats, including one lady, and a sepoy of the 22nd Regiment, Teg Ally Khan, whose name deserves to be recorded for the fidelity he showed to his officers in misfortune, were all destroyed on the road by sepoys and villagers, with the exception of Teg Ally Kahn, and Sergeant-Major Busher, 13th Light Field Battery, who has written a very interesting account of his escape, and the death of his companions.

The ladies, civilians, and some of the officers of Fyzabad were assisted and forwarded to a place of safety by Maun-Sing, and more zealously by the Rajah of Gopalpore.

At Baraitch, the officers, two civil and one military, after avoiding the immediate danger by an early retreat, sanctioned by Sir Henry Lawrence's express orders under circumstances such as theirs, were cut off by the treachery of the agent for the Rajah of Nanpara.

The officers, military and civil, of Durriabad, all contrived to escape,—two clerks only, who were taken prisoners, suffered ill-treatment and insult before they were liberated.

At Gonda, the preservation of the English was due to the hospitality of the Rajah of Bulrampore.

Two only out of six escaped from the rising at Sultanpore. The ladies were happily saved by the Rajah of Ameatee. The native gaoler of Sultanpore gives a minute account of the tragic end of Messrs Block and Strozan, the Commissioners.

We have thus cast a hasty glance over the course of the mutiny as it ran through the stations of Oude. The mutiny at Lucknow, and the gallant defence of the Residence against the assaults of congregated enemies, has already been so fully related, that it is passed over with comparatively slight notice by Captain Hutchinson. He contributes, however, to this part a document, as far as we know, hitherto unpublished,—the diary of Major Banks, Sir Henry Lawrence's successor as Chief Commissioner of Oude. "The original diary, much defaced and blotted, was found in the city by Mr Kavanagh, Assistant Commissioner, all written over with native accounts, evidently belonging to some pay halvidar of a regiment."

On closing these records of loss, and crime, and sufferings, the sadness of our reflections are mitigated by one consolatory thought—that dreadful as are the tales they unfold, they are less dreadful than those that have been freely circulated and believed, in relative to the enormities of the sepoy rebellion. The imagination of an alarmed and justly incensed public has, we trust, exaggerated a truth, needing no exaggeration. The real guilt of the sepoys, and of the dregs of the nation that joined in their offences, is great enough; but it is certain that we look in vain in this book for any confirmation of those fiendish and revolting cruelties that were at the time laid to their charge. By the side of deeds done by white man to white man in so called religious wars, as in that carried on against the Waldenses; or those done between the white and black races, either on the one side in a servile revolt, or on the other in the daily course of the slave trade as it is still carried on on the East coast of Africa,—the wholesale massacres, blood-thirsty ferocity, and callous indifference to the wants of their captives, nay even the treachery of the Hindoo, appear in comparison humane; and, unless Oude can be proved an exception to the course of things in our Indian provinces, the sepoy cannot justly be placed on that pinnacle of infamy to which he has long been exalted by the public voice, but must be contented with a less conspicuous place in the annals of human wickedness.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

M. Michel Chevalier has been raised to the dignity of Senator. Assuredly for the distinguished services he has rendered to the cause of commercial reform in this country, and for his share in negotiating the treaty with England, he well deserves this honour, or any other that could be bestowed. Nevertheless the public would, no doubt, have rather seen him appointed to some office to which active duties are attached, than placed in the quiet haven of the Senate.

The Council of State has had conferences with the Emperor on the subject of the modifications of the import duties on coffee, sugar, cocoa, and tea. What the Council proposes was mentioned in my last. The Bill it has prepared must be passed quickly by the Legislative Body and the Senate, if, as is desired, the new duties are to come into force on the 15th April.

A bill on the subject of the cotton and wool duties is now before the Legislative Body. Its provisions are perfectly in accord with what my letters stated they would be. Thus, from the 15th of April next, those articles brought from countries out of Europe by French vessels are to be exempt; from countries in Europe by such vessels they are to pay 3f the 100 kilogs; and by foreign vessels from anywhere 5f. Wool, moreover, of European countries brought in by land is to be exempt; but that of non-European countries so introduced is to pay 5f. The drawbacks at present allowed on the export of cotton and woollen yarn are to be continued for two months from the date at which the new duties come into effect; that on cotton fabrics is to continue for three months; and that on woollen fabrics for four months.

The sugar refiners of Nantes and Marseilles are not at all satisfied with the coming changes in sugar duties. In making exports of refined sugar they have been allowed to claim drawback for 100 kilogrammes, though exporting only 75; but as they really obtained more than 75 kilogs refined out of every 100 raw, they realised large profits which had never been contemplated by the law. Under the new law, it is probable that they will be only allowed to claim the drawback for 100 kilogs. on making an export of refined of 80 or 83 kilogs. They complain that this will place them at such a great disadvantage, compared with the Belgian and Dutch refiners, as to cause them to lose the foreign market: but they forget that, from the progress in the manufacture, it is easier now to obtain 80 or 83 per cent. in refining than it was formerly to obtain 75; and they forget also that the reduction of the duties on sugar will largely increase the market at home. Besides this, they should bear in mind that the privilege they at present enjoy is virtually a heavy burden on the public; and that they have no more right to burden the consuming community than any other class of producers.

It is not often that the agricultural interest in any country is capable of making an enlightened appreciation of tariff reforms. It is, therefore, a real pleasure to have to record that the Agricul-

tural Society of the district of Meaux has expressed the opinion that the total suppression of all duty on foreign wool may safely be accomplished, inasmuch as French wools, from the peculiar qualities they possess, are able to support any competition. That this opinion is a correct one is proved from the fact that the average price of French wool from 1856 to 1859, when the duty was 15c the kilog, was 2f 40c to 2f 50c the kilog; and that during the twenty years preceding, when the duty was 22 per cent. *ad valorem*, the average price was 2f 6c. In the thirteen years before then, with a duty of 33 per cent. it was 2f 20c; and in the five years before then it was 2f 99c. The present production of unwashed wool in France is estimated by good authorities at about 91,500 tons annually, which gives in washed 30,000 to 35,000 tons. The import for the last few years has considerably exceeded the latter figures.

The Finance Department announces that, from this day, the rate of interest on Treasury bills is fixed at 2 per cent. for those of from three to five months, and at 2½ for those of from six to twelve months. This is a reduction of ½ per cent. The belief is, that it will be followed by a reduction in the rate of discount of the Bank of France.

Stockbrokers and speculators have long complained bitterly that payment should be exacted for admission to the Bourse, and have described it as one of the principal causes of the want of speculation which has prevailed for some time past. The Municipality of Paris, which receives the money levied at the doors, offered lately to sell the Bourse outright to the Company of Stockbrokers for 240,000*l* English money, leaving them to charge for admissions, or to make them gratis, as they might please. But the brokers, by an overwhelming majority—57 to 3 it is said—have refused to make any such bargain.

Although, as you have shown, the promised repeal of the prohibition to export rags from this country was not likely to produce much benefit to English paper-makers,—owing to the market in France being not larger than is required for home wants,—the Government, in compliance with the prayers of the French paper-makers, has undertaken to impose rather a heavy duty on exports, —from 50 to 100 per cent. *ad valorem* it is said. Now, as the price of rags here rules from 7*l* 4s to 20*l* the ton, and as the supply is limited, it may be feared that, with an export duty, English paper-makers will be as much excluded from the French market as they have been under the prohibition.

The Bourse has again, during the whole week, been exceedingly inactive, owing to the disquietude caused by political affairs. The following are the quotations:—

	Thursday March 15. f c		Thursday March 22. f c
Threes	68 5	.....	67 90
New 3 per Cent. Loan	68 10	.....	...
Bank of France	2800 0	.....	2800 0
Credit Foncier	745 0	.....	750 0
Credit Mobilier	747 50	.....	743 75
Orleans Railway	1395 0	.....	1395 0
Northern	928 75	.....	931 25
Ditto, new	835 0	.....	837 50

Sardinian (Victor Emmanuel)	397 50	.....	401 25
South Austrian Lombard	537 50	.....	535 0

The monthly Customs returns, just published, testify to the depression of trade caused by the political situation. In February last the import duties only amounted to 13,237,248f, whilst in the corresponding month of last year they were 13,823,832f, and in that of the year before 13,614,251f. For the first two months of the present year they amounted to 26,848,485f.

The following is a comparison of the principal imports for French consumption:—

	Feb. 1860.	Feb. 1859.	Feb. 1858.
Oxen and sheep ..... head	25444	25528	19119
Wines ..... hectolitres	6329	15312	4362
Brandies	3625	1615	2023
Alcohol (3-6)	1162	7	541
Cocoa ..... quintals	3403	3327	3203
Coffee	22018	22704	27942
Grain	20864	191705	251238
Fleur	20		
Hemp, peeled, &c.	4923	4623	2216
Cotton	68928	88916	76457
Flax and hemp threads	1317	529	376
Oleaginous seeds	83533	75084	53939
Tallow	473	668	2393
Hops	729	1054	...
Coal	3513961	3437631	3433476
Coke	422002	361857	...

Subjoined is an account of the markets:—

Flour.—At *Paris*, during the week, business has been dull. Yesterday, the quotations were: ordinary, 52f to 53f the sack of 159 kilogs; good and superior, 54f to 56f; four marks for April, 55f 25c and 55f 50c; for April and May, 56f; for May, 56f 50c.

Wheat.—At *Paris*, yesterday, little was done, holders wanting a rise and purchasers a fall. The definitive prices were 31f 50c to 32f for good sorts the sack of 120 kilogs; choice, 32f 50c to 33f; ordinary, 30f to 31f. Of the provincial markets, 42 present a rise of from 15c to 75c the hectolitre, 17 a fall of from 10c to 1f, and 57 have undergone no change.

Cotton.—In the early part of the week ending Friday, business at *Havre* was not active, but it revived in the latter part in consequence of news from the United States. On the whole, the sales were 6,650 bales; but prices for low New Orleans remained at 98f the 50 kilogs, and for very ordinary ditto at 105f. In low Georgia there was a rise of 2f, and in very ordinary ditto, of 1f. The total arrivals of the week were 21,554 bales. This week, business has been rather animated, and prices have risen: yesterday, low New Orleans was 99f to 100f.

Sugar.—In this article also the approaching modification of duties caused considerable activity at *Havre*, in the week ending Friday. The sales were 500 casks French West India, disposable, at 60f 50c to 62f the 50 kilogs duty paid; 1,300 ditto for delivery, 60f to 64f; 100 ditto "usine," disposable, 62f; 2,200 bales Reunion, 63f; 7,300 sacks Mauritius, 65f 50c to 66f; 6,925 sacks ditto for delivery, 67f; 2,000 casks Havana, 37f to 38f in bond. The arrivals were 1,381 casks 209 sacks. This week sales have not been numerous; quotations have been: Reunion, 64f 50c; French West India, 62f 50c; Havana, 37f and 37f 50c. At *Nantes*, in the latter part of last week, some most important sales—upwards of 20,000 casks—were effected; and closing quotations were: Reunion, 61f 75c; Mauritius, 66f; French West India, 60f 50c; Havana, nominally 36f. This week nearly 50,000 casks Reunion have been sold at 63f. At *Bordeaux*, last week, a fair amount of business was done, including 11,000 bales Mauritius for England. Quotations were: French West India, 2f; Reunion, 61f 50c to 63f 75c; Mauritius, superior, 71f to 73f. This week a small lot of French West India has been sold at 62f. At *Marseilles*, last week, no sales worth mentioning could be

effected, owing to holders refusing to accept offers which would have placed quotations below those of other markets.

Coffee.—At *Havre*, in the week ending Friday, business was important, owing to the announced reduction of import duties, and there was a rise in prices, that in Hayti being rather considerable. The sales were 3,000 sacks Hayti (Port-au-Prince, Cayas, and Cape), disposable, at 76f 50c to 79f the 50 kilogs in bond: 14,600 sacks Port-au-Prince for delivery, 73f 50c to 80f; 1,600 sacks Hayti Cape for delivery, 75f 50c to 80f; 2,500 sacks Gonaives for delivery, 76f to 81f; 2,700 sacks Rio not washed, disposable, 73f 50c to 76f; 2,650 ditto for delivery, same price; 500 sacks Rio washed, disposable, 80f 50c to 82f; 3,655 Santos, for delivery, 73f to 80f; 470 sacks Porto Cabello, disposable, 86f; a small lot of San Yago, 86f to 91f 50c; 154 sacks Porto Rico, 84f 50c; 30 sacks Manilla, 131f duty paid; and 250 sacks Ceylon triage, at prices kept secret. In addition, some sacks of damaged Hayti were sold by auction. The arrivals were insignificant. There have been numerous sales this week: Rio washed, 85f; Rio not washed, 75f; Hayti, 78f 50c to 80f; ditto Cape, 81f; ditto Gonaives, 81f to 82f. At *Nantes* and *Bordeaux* business was not so important. In the former city Port-au-Prince and Cape were 82f 50c in bond, and a lot of Mauritius triage was sold at 90c the half-kilog duty paid. Nothing has been done this week at either place. At *Marseilles*, last week, a few hundred sacks Hayti went at 80f; 1,000 sacks Rio, 75f to 76f, and about 1,400 sacks Guayra, 85f to 88f.

Indigo.—At *Havre*, in the week ending Friday, 20 cases Bengal were sold, part at 10f 20c to 10f 30c the half-kilog; part at prices kept secret. There were no arrivals. This week only 2 cases of Bengal have been sold, and the prices are not given. At *Bordeaux*, last week, 20 cases Bengal, 30 Java, 18 Madras, 14 Kurpah, were sold, but prices are not stated. This week, 4 cases Kurpah have been sold, but the price is not mentioned.

Hides.—At *Havre*, in the week ending Friday, a fair amount of business was done: 400 Buenos Ayres dry at 162f 50c the 50 kilogs duty paid; 7,000 Monte Video salted, 87f 50c; 500 Australia salted, 62f; 1,250 New York salted, 63f 50c for delivery; 436 New Orleans for delivery, 60f; 350 Philadelphia and New Jersey salted 63f 50c; 270 Lima dry and drysalted, 90f to 125f. Some sales of damaged by auction also took place. The sole transaction this week has been the sale by auction of 886 dry Mexican damaged, at 69f 50c to 97f 50c duty paid.

Wool.—At *Havre*, last week, the sales were 64 bales Buenos Ayres unwashed, 1f 10c to 2f 35c the kilog in bond, and 150 Peru unwashed at prices kept secret. The arrivals exceeded 800 bales. This week 8 bales Buenos Ayres unwashed have been sold at 1f 95c; 8 bales sheepskins, unwashed, at 1f 50c; 3 bales Monte Video ditto, 1f 40c.

Tallow.—No sales were made at *Havre* last week, and the only arrivals were 15 casks from Buenos Ayres. There have been neither sales nor arrivals this week. At *Paris*, yesterday, the 100 kilogs were 135f 50c, a rather heavy fall on last week's quotations.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg., first quality, was 101f the hectolitre; Montpellier of 86 deg. 135f. At *Bordeaux*, on Monday, 3-6 Languedoc was 132f 50c; beetroot, first quality, 107f.

St Petersburg, March 11.

There is some reason to believe that the Government has under consideration a series of important tariff reforms, the chief of which will be a reduction in the import duties on raw materials. Public opinion is unanimous in favour of such reforms. A very large loan is likely to be made to reduce the paper money in circulation

COMMERCIAL AND MISCELLANEOUS NEWS.

By the arrival of the Bombay mail we have received files of papers from Bombay to the 25th of February. We take the following from the overland summary of the *Bombay Times and Standard*:—"India has been on the tiptoe of expectation for months for Mr Wilson's Budget. The following important notification was issued by the local Government:—

Notification.—Financial Department.

The following telegram, dated Calcutta, February 10, from the Financial Secretary to the Government of India, is published for general information:—

Referring to the result of an account of subscriptions to the Five-and-a-Half per Cent. Loan, published in a *Calcutta Gazette Extraordinary* of this date, and to the desire of the Government not to exceed the stipulated limit of five crores of rupees, the Honourable the President in Council has decided to close the Five-and-a-Half per Cent. Loan immediately at all district treasuries, and to limit the subscriptions at Madras and Bombay respectively to a total of 80 (twice 40) lacs of rupees in cash, leaving the balance to be subscribed at Calcutta. These proportions have been decided upon according to the rate at which the loan has been taken up at the three presidency towns up to this date, as far as has been ascertained. You will please to publish the above in your *Official Gazette*, and to report to this department, by telegraph, as soon as the amount allotted to your Presidency has been subscribed.

Bombay Castle, Feb. 11, 1860.

The respective subscriptions in the three Presidencies up to the issue of the notification, and the amount consequently available for each, were as follows:—

	Madras.	Bombay.	Bengal.
	rp.	rs.	rs.
Amount already subscribed ...	63,64,000	62,64,100	2,95,56,000
Remaining available	16,36,000	17,35,900	44,44,000
	80,00,000	80,00,000	3,40,00,000

The rush made by speculators in Bombay was not more eager than that in Calcutta and Madras, the loan being closed in all three Presidencies the day the notification appeared. The stock is quoted in Bombay to-day at 2½ to 2¾ per cent. premium. We have to notice a considerable falling off in the demand for cotton pieces good, the dealers finding little opportunity for quitting their present stocks, and being in consequence unwilling buyers. All descriptions of grey shirtings have declined in value, and the sales reported are small in extent. The market has been very irregular, and, while some sales have been made at a fall of 4a to 6a per piece, others have exhibited a much less reduction. Cotton twist continues much depressed. The export markets have on the whole been dull, stocks of produce being low, while few English houses are inclined to operate in the present position of prices and freights. Cotton of the old crop continues to decline, and the sales, from paucity of supplies, are very small. Broach may now be had at 110r to 113r, and Dhollera at 109r to 112r per candy. Linseed has further declined to 3r 14a to 3r 15a per cwt, but the fall is insufficient to bring forward purchasers to any extent; and the chief shipments are going forward on native account. The continued demands of Government for tonnage for China have again tended to advance the rates of freight. The current rates for London may now be quoted at 3*l* 15s to 3*l* 17s 6d, and or Liverpool 4*l* to 4*l* 5s."

The following returns show the foreign imports at New York for February:—

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending February 11, 1860, when compared with the previous month:—

	Jan. 14, 1860.	Feb. 11, 1860.	Increase.	Decrease.
	£	£	£	£
Bank of England.....	21282625	21735265	452640	...
Private Banks	3499722	3504381	4659	...
Joint Stock Banks	3014530	2977034	...	37496
Total in England.....	27796877	28216680	419803	...
Scotland.....	4289541	4124606	...	164935
Ireland	7361762	7353744	...	8018
United Kingdom.....	39448180	39695030	246850	...

And, as compared with the month ending the 12th of February, 1859, the above return shows an increase of 1,046,372*l* in the circulation of notes in England, and an increase of 1,721,757*l* in the circulation of the United Kingdom. On comparing the above with the fixed issues of the several banks, the following is the state of the circulation:—The English private banks are below their fixed issue 900,554*l*, the English joint stock banks are below their fixed issue 325,323*l*,—total below fixed issue in England 1,225,877*l*; the Scotch banks are above their fixed issue 1,375,335*l*, the Irish banks are above their fixed issue 999,250*l*. The average stock of bullion held by the Bank of England in both departments during the month ending the 8th of February was 15,340,853*l*, being a decrease of 1,283,334*l* as compared with the previous month, and a decrease of 3,938,935*l* when compared with the same period last year. The following are the amounts of specie held by the Scotch and Irish banks during the month ending the 11th of Feb.:—Gold and silver held by the Scotch banks, 2,637,228*l*; gold and silver held by the Irish banks, 3,804,375*l*; total, 5,441,603*l*; being an increase of 90,193*l* as compared with the previous return, and an increase of 490,684*l* when compared with the corresponding period last year.

An account, pursuant to the Act 8 and 9 Vict., cap. 38, of the amount of bank notes authorised by law to be issued by the several banks of issue in Scotland, and the average amount of bank notes in circulation, and of coin held, during the four weeks ending Saturday, the 10th day of March, 1860:—

COTTON.

NEW YORK, March 6.

The following is a statement of the week's sales here and at the chief Southern ports, at latest telegraphic dates, with closing prices, f.o.b., with freight in sterling at current exchange :—

		Sales.	Closing.		Middling.		Freights.		F.o.b.
New Orleans	Mar. 5	50000	unchanged	...	10⅞c	...	⅝d equal to		6.18d
Mobile	5	29000	—	...	10⅝c	...	9-16d	—	6.03d
Charleston	5	16000	—	...	10¾c	...	7-16d	—	5.99d
Savannah	5	7000	—	...	10¾c	...	⅜d	—	5.87d
New York	6	700	⅛c lower	... Upl	11c	...	½d	—	5.90d
Total		109000 bales					Average		6.0

There is now an excess in receipts of 625,000 bales over last year, when the crop reached 3,851,000, and of 1,571,000 bales over 1857-8 (crop 3,114,000 bales).

The following is a statement of the movements of cotton for the past week, and since 1st September last, compared with the five preceding years :—

	Receipts. Week's Receipts. bales	Receipts. Since 1st Sept. bales	Exports for the Week. To Great Britain. bales	To France. bales	To other For. Pts. bales
1859-60	132000	3569000	102000	17000	16000
1858-59	79000	2944000	56000	8000	19000
1857-58	119000	1998000	49000	9000	14000
1856-57	88000	2385000	68000	15000	26000
1855-56	131000	2497000	59000	4000	28000
1854-55	82000	1657000	55000	7000	14000

	Exports Since First September. To Great Britain. bales	To France. bales	To other For. Pts. bales	Total. bales	Stock. bales
1859-60	1540000	416000	248000	2204000	1099000
1858-59	956000	328000	292000	1576000	970000
1857-58	748000	242000	165000	1155000	748000
1856-57	785000	282000	229000	1296000	660000
1855-56	979000	323000	304000	1606000	650000
1854-55	846000	195000	153000	1194000	387000

Thus the receipts show an increase of 625,000 over those of last year, and an increase of 1,571,000 over 1857-58, and the exports exhibit the following results :—

	To G. Britain.	To France.	To other F.P.	Total.	Stock
Compared with last year	Inc. 584000	Inc. 88000	Dec. 44000	Inc. 628000	Inc. 129000
Compared with 1857-8	Inc. 792000	Inc. 174000	Inc. 88000	Inc. 1049000	Inc. 351000

New York market has been dull and inanimate throughout the week, business being kept in check by the unsettled state of the Southern markets and expected dull news from Europe. Prices have been irregular and are ⅛c lower at the close. The week's sales reach about 7,000 bales, of which 2,500 in transit at previous rates. Middling Upland from store is quoted 11c.

Southern Markets by Telegraph—At the South, business has been unsettled during the week; prices have fluctuated, and at the close are barely maintained. The New Orleans market opened quietly, and, with a continuance of heavy receipts, the week's sales have been restricted to 50,000 bales. Mixed lists have been offered at reduced rates without encouraging business, and holders generally show less firmness. At Mobile there has also been some irregularity, and occasional concessions have brought in buyers; but we are unable to reduce our quotation for even running middling. In the Atlantic markets the higher grades have been generally maintained, owing to their scarcity, while the lower qualities are neglected and quotations nominal. Freights are without material change.—*From Messrs Neill Bros. and Co.'s Circular, forwarded by J. C. Ollerenshaw, Esq., of Manchester.*

NEW YORK, March 10.—We have to notice an increasing activity in the market for this staple, under which transactions have been comparatively heavy at enhancing prices. Sales for the three days aggregate 12,000 bales, including 5,500 on the spot and 6,500 in transit. We quote :—

NEW YORK CLASSIFICATION.

	Upland. c	Florida. c	Mobile. c	New Orleans and Texas. c
Ordinary	9	9	9	9¼
Good ordinary	9⅝	9¾	10	10¼
Middling	11⅛	11⅛	11⅜	11⅜
Good middling	11⅞	12	12⅛	12⅛
Middling fair	12⅜	12⅝	12⅝	13⅛

The arrivals have been from Texas, 271 bales; New Orleans, 1,200; Florida, 1,250; Georgia, 2,442; South Caroline, 1,017; North Carolina, 89; Virginia, 31; total, 6,300 bales. Total import since 1st inst., 21,200 bales. Export from 1st to 6th March, 6,634 bales, against 5,798 in 1859.

LIVERPOOL MARKET.—MARCH 23.

In the early part of the week the cotton market was still much depressed, and for several days prices were very irregular, some holders pressing sales. The low prices accepted have induced more demand, and a large business has since been done by the trade as well as for export. Prices have become much more regular, and our quotations for the medium grades are now fully as high as those of this day week. In the superior qualities sales have been made on even better terms. Egyptian are less saleable, and perhaps a shade lower. Brazil are without alteration. East India steady at last week's rates. The sales to-day may reach 10,000 bales. There is a fair demand at firm prices. The reported export amounts to 9,960 bales, consisting of 5,990 American, 250 Brazil, and 3,720 East India.

MARKETS IN THE MANUFACTURING DISTRICTS.

The latest commercial advices, both from India and China, being considered somewhat favourable, there has been an improved feeling in the demand for manufactured goods, this week, for shipment to the East, at, mostly, very full prices. For the Continent, however, very few purchases have been made; but the home trade is decidedly buoyant. In the iron districts the transactions have been somewhat restricted. Coals, however, have been in increased demand, and the quotations have had an upward tendency.

MANCHESTER, March 22.—A better feeling has prevailed here this week, and probably more contracts have been given out than during the previous fortnight. Mule yarns, which had declined about ¼d per lb on the first tidings of additional duty in India, have now recovered what they lost. Cop twist and weft, of good spinnings, have had a considerable business at full rates, but inferior spinnings have been almost unsaleable, from the difficulty which exists in getting operatives to weave them. Shirtings, madapollams, and other Eastern cloths have been taken rather freely, in some instances for delivery into May, and at an extra 1½d on the low sales of last week. Transactions have been chiefly for China and Calcutta. For other markets there has been greater disposition for buying.

BRADFORD.—Wool—Sales have been effected at full prices. Yarns—The export houses are making inquiries, but not doing much. For home consumption, the demand is a full average, but present prices are not remunerative to the spinner. Pieces—Manufacturers are better off for orders than a month ago. Business is far from buoyant, and prices are by no means satisfactory.——HUDDERSFIELD.—Orders continue to be freely given to manufacturers of superior descriptions of fancy trouserings. There is a brisk demand for Bedford and woollen cords, so great indeed that the manufacturers are not able to keep any stocks in hand. Business in the local wool market continues active, and prices are well sustained.——LEEDS.—The business done was on the whole an average trade. Inquiry was scarcely so lively for light goods as has lately been the case, the demand being more in the line of unions and cotton warps.——HALIFAX.—There has been a slight improvement in the worsted trade, more business having been done both in yarns and goods. Wools are very firm in price, but purchases are made cautiously.——ROCHDALE.—Wool—Transactions have scarcely been so numerous as last week, and prices are much more steady at the advance we then quoted. Flannel—A very good feeling prevails generally. Small lots for sorts are disposed of at an advance of 1s 6d and 2s.——LEICESTER.—There has been a tolerable amount of business doing in the hosiery trade. Yarns are without material change, spinners continuing tolerably employed. Wools are high in price, and there is no indication of much abatement.——NOTTINGHAM.—The foreign demand is dull. Manufacturers are keeping stocks down as much as possible, and making only those fabrics which are really wanted. In the hosiery trade a fair business is doing.——BELFAST.—In the local affairs of the North of Ireland we have to report the healthy activity of steady commerce.——DUNDEE.—The linen trade is tolerably healthy, and prices are well supported.——BIRMINGHAM.—Trade, almost generally, is in a flourishing state, although the number of foreign orders on hand is not large.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, March 10.—FLOUR AND MEAL—There has been a moderate degree of activity in the market for State and Western flour, and we notice a still further improvement in prices equal to 5c to 10c per bbl. Transactions for the three days comprise 27,500 bbls. Canada flour is in limited supply, and holders have accordingly advanced their pretensions considerably, sales having been effected to the extent of 400 bbls, closing buoyantly to 5 dols 90c to 7 dols 25c as to quality. The market for

Southern flour sympathises with that of State and Western, and prices have met with a corresponding advance. Export of wheat flour from 1st to 6th March, 7,918 bbls, against 12,590 bbls in 1859.

GRAIN.—The activity continues unabated, and transactions have been to a fair extent, at a still further improvement in prices. The sales for the three days aggregate 56,300 bushels. Export from 1st to 6th March: wheat, 5,300 bushels, against 600 bushels in 1859; corn, 11,600 bushels, against 2,769 bushels in 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

Increased firmness has been apparent in the demand for nearly all kinds of wheat in the leading markets held this week, and, in most instances, prices have further advanced 1s per quarter. The prospect of the trade is certainty more favourable than for some time past, and the growers of English, as well as the importers of foreign, almost generally, are anticipating even higher rates, which, in our opinion, are likely to be realised, more especially if the weather continue favourable for thrashing. Fine English wheats have now advanced about 5s per quarter since the commencement of the year, and it is fully anticipated that 5s more will be obtained before the end of April. This would bring the best wheats up to 60s, a point at which, we imagine, numerous sellers would come forward in order to get rid of stock prior to the reopening of the Baltic navigation, and which will, no doubt, bring us very large supplies, as our accounts from the Lower Baltic ports state that large quantities of wheat have been received there on English account.

The barley trade, owing, in some measure, to an active inquiry for seed parcels, has been somewhat buoyant, and prices have ruled very firm. Oats, beans, and peas have commanded extreme rates, and the value of flour has shown a tendency to advance. Generally speaking, therefore, the trade is decidedly firm.

Throughout the Continent, the inquiry for wheat, barley, and oats, for spring shipment, has somewhat improved, and, in some instances, the former article has produced rather more money. Other articles have sold steadily at full currencies. In the United States, produce generally has commanded extreme rates, and the shipments to England have continued limited.

In Scotland, the supplies of wheat on offer have somewhat increased; nevertheless, the demand for all kinds has improved, and prices have slightly advanced. All spring corn has changed hands steadily at fully previous rates. For the time of year, the shipments to the South have been rather large.

The Irish markets have shown rather more firmness for wheat, Indian corn, and oats, but the business transacted in those articles has not been extensive. The supplies on offer have continued only moderate

The few samples of English wheat on offer here to-day were disposed of at 1s per quarter above Monday's currency. Foreign wheat was likewise 1s dearer. All spring corn commanded full quotations, and the value of flour was rather higher.

Mr Ed. Rainford informs us that 17 vessels, laden with grain, have arrived off coast since the 14th inst., and that a moderate business has been passing in floating cargoes, at full prices.

The London averages announced this day were:—

Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,221,190
Rest	3,740,163	Other Securities	22,575,833
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	10 362,543	Notes	8,719,705
		Gold and Silver Coin	788,939
Other Deposits	12,932,920		
Seven Day and other Bills	717,041		
	42,305,667		42,305,667

Dated the 22nd March, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,059,771	Securities	32,719,023
Public Deposits	10,362,543	Coin and Bullion	15,376,374
Private Deposits	12,932,920		
	44,355,234		48,095,397

The balance of Assets above Liabilities being 3,740,163*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

A DECREASE of Circulation of	£165,239
An INCREASE of Public Deposits of	1,091,205
A DECREASE of Other Deposits of	97,920
No change in the amount of Government Securities.	
An INCREASE of Other Securities of	759,482
An INCREASE of Bullion of	76,494
An INCREASE of Rest of	7,930
An INCREASE of Reserve of	239,769

Owing to the great increase in the Treasury deposits, which has been only partly counteracted by the considerable addition to the "other" securities, the reserve has increased.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.

— Hamburg (3months)	13 13	13 8	13 6 6¼	13 4½ 4¾	13 5 5½

At the corresponding period of the year 1850, the Pope was still in voluntary exile at Portici, resisting the allurements held out for his return to Rome by the French Commander of the garrison. As now, the Hungarians were agitating for reforms. The blockade of the Piræus had ceased, the English claims upon the Greek Government having been submitted to the award of France. The explosion of political passion in Paris, upon the occasion of the elections of the 10th of March, was slowly subsiding. Remittances of gold were being made to Russia on account of Messrs Baring's 4½ per cent. loan. Messrs Hambro and Son's Danish loan of 800,000*l* had just been allotted, and commanded 2 premium.

In 1857 attention was monopolised by the general election, which was drawing to a close. Money continued tight.

In 1858 the rate of discount in Lombard street had fallen to 2½ per cent. Subscriptions had just been invited for the first issue of 5,000,000*l* of Indian 4 per Cent. Debentures having five years to run.

In 1859, a loan of 7,000,000*l* for India was under discussion in Parliament, and the Premier (Lord Derby) had announced that 3,000,000*l* more would be wanted. The apprehension of war in Italy had been somewhat allayed by the announcement that Russia had proposed a Congress of the European Powers, and that the suggestion had been acquiesced in by France, Austria, England, and Prussia. The preliminary announcement of a new Russian loan of 12,000,000*l* had been made.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 1,350,561*l*; in 1857, a deficiency of 10,095,867*l*; in 1858, a deficiency of 1,231,123*l*; and in 1859, a deficiency of 3,306,755*l*. In 1860, the deficiency is 9,642,913*l*, being very large.

The money market has been tight during the whole of the week. The supply generally is limited, owing mainly to the influx of revenue into the Bank. These funds being wanted in the open market, where no business is done below 4 per cent., the applications at the Bank of England have been large, and have included many from the discount houses. It is not likely that the market will become easier until the dividends are released; and the relief then anticipated will be diminished in proportion to the amount of the advances already obtained during the shutting of the transfer books. To a considerable extent the dividends have been "discounted." The trade of the country is fairly active, and, according to all appearances, highly profitable. The sustained demand for money, therefore, cannot excite surprise.

In Lombard street, to-day, the rate for the best bills up to three months was 4 to 4¼ per cent., and for six months 4¾ to 5. A heavy amount of business was again done at the Bank.

On Monday the announcement was made of a new Brazilian loan for 1,373,013*l*, in a 4½ per cent. stock at 90, through Messrs Rothschild. The official notification is as follows:—

Imperial Brazilian Loan of Four-and-a-Half per cent. for 1,373,013*l* 14s 5d, in bonds of 100*l* each, for advances to be made to the Pernambuco Railway Company, and to promote other industrial undertakings.

Messrs N. M. de Rothschild and Sons beg to inform the public that they are ready to receive applications from parties who may be desirous of subscribing for any portion of the above-mentioned loan.

Applications will accordingly be received for this object up to Friday, the 23rd instant, at twelve o'clock.

Every application must be accompanied with a deposit of 10 per cent. on the amount applied for. In case the allotment should not require the whole deposit, the surplus will be forthwith returned, but if it be not sufficient for the first instalment on the amount allotted, the balance required to complete the same must be paid forthwith.

The bonds payable to bearer will be for 100*l* each, to be paid for as follows:—

25*l* per cent. on allotment.
25*l* per cent. on 1st of June next.
20*l* per cent. on 2nd of July next.
20*l* per cent. on 1st of August next.

90*l* for each 100*l* stock.

The interest will commence from the 1st of December, 1859, and be payable half-yearly, at the office of Messrs N. M. Rothschild and Sons.

The sinking fund will be provided for in the usual manner.

Discount at the rate of 3 per cent. will be allowed on anticipating the above instalments, and the bonds will be delivered as soon as obtained from His Excellency the Imperial Brazilian Minister.

The announcement was received with great indifference. Up to the latest moment the loan excited little attention. The subscription list was closed this afternoon. We understand that the bulk of the loan has been taken by the public, and that Messrs Rothschild take the balance themselves. The price was first quoted in the Stock Exchange ½ to ¾ per cent. premium, but has gradually drooped, and stood this afternoon at only par to ¼ premium. A sum of 308,927*l* in cash will be required on the allotment, on account of the first instalment of 25 per cent. It appears that 400,000*l* of the loan is to be advanced by the Brazilian Government to the Pernambuco Railway Company, in accordance with the terms of the concession, and that the rest is to be devoted to other public works. The issue of Brazilian Government or guaranteed securities has been so rapid of late as to outstrip the appetite of the public.

Rumours of other impending foreign loans have been circulated, but prematurely, to say the least. The negotiations for a new Turkish loan are again in abeyance, the persons

consulted not seeing their way to carry out the operation. No negotiations appear to have been formally sanctioned by the Turkish Government.

The arrivals of specie and bullion this week have been larger than of late, embracing up to this day a total of about 189,000*l*, of which 129,000*l* was from Australia and 60,000*l* from the United States. To-day news was received of the arrival of the Champion of the Seas, from Melbourne, with 176,000*l* in gold. There have been no withdrawals of bullion from the Bank.

The Australian gold ships known to be still at sea are the Cleadon, Copenhagen, Wellesley, and Suffolk, with a total of 448,000*l*, of which 319,000*l* by the three former is now due.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day :—

Gold.—Since the date of our last circular (15th inst.) we have had several arrivals of gold, and the amounts thus received have been sufficient to supply all demands for exports. The vessels now in are the Saldanha, from Melbourne, with 65,000*l*; Essex, from Melbourne, with 56,000*l*; Indemnity, from Melbourne, with 71,788*l*; Shannon, from the West Indies, with 19,500*l*; Arago, from New York, with 20,000*l*, making a total of 232,288*l*.

Silver.—The Shannon, from the West Indies, brought 69,500*l* in silver, which was sold at 62¼d per oz standard; the price has, however, since receded to 62d per oz. The Bombay letters not containing such large orders as had been expected, the amounts received from the Continent have been considerable. The La Plata took 8,000*l* to the West Indies.

Mexican Dollars.—We quote dollars at 62¾d per oz firm. The Arago brought about 20,000*l*, and the Europa 18,000*l*, from New York: these amounts were sold at the above rate for the last mail to China of the 20th inst., by which opportunity Government made a remittance of about 26,000*l* in dollars.

Exchange on Bombay and Calcutta, for bank drafts at 60 days' sight, is firm at last week's quotation of 2s 0⅜d; Madras, 2s to 2s 0⅛d; documented bills, 1s 11⅞d.

India Government Loan Notes have been adversely affected by the tightness of the money market, and prices have given way to the extent of a good half per cent. We quote, 104¾ to 105 for 5½ per Cents., and 98¾ to 99 for 5 per Cents., with a dull market, and very limited operations.

Although the financial accounts from India are most cheering, and the extraordinary rebound in the prices of Government securities in the Indian markets is fully confirmed, the Indian rupee paper here has declined ¾ per cent. The closing quotations this afternoon were 98½ to 99 for the Five, and 104½ to 105 for the Five-and-a-Half per Cents.

The foreign exchanges this week have shown a tendency to improvement. A slight advance has taken place in the rates for bills on Holland, Belgium, and Hamburg.

The Committee of Bankers on Monday, as was anticipated, adopted the compromise suggested by the Joint Stock Banks, and decided upon closing banking business at three o'clock on Saturdays, commencing with the 19th of May. This resolution is subject to the agreement of the Bank of England, by whom the matter has been referred to a committee. It is fully expected that they will raise no objection. The successful working of the experiment now decided upon will pave the way to a termination of banking hours at two o'clock on Saturdays.

The securities of the two principal Canadian railway companies have attracted a good deal of attention this week. A very favourable influence will be exercised by the approaching visit to Canada of the Prince of Wales, accompanied, perhaps, by Prince Alfred. Their Royal Highnesses will be present at the formal inauguration of the great Victoria Bridge. A more interesting celebration has never been known in North America, and it is not doubted that an immense multitude will be gathered together, not merely from the British colonies, but from every part of the United States. The shareholders of the Great Western Railway Company of Canada have also been gratefully impressed by the announcement that the Government have very liberally agreed absolutely to remit for three years the interest upon the outstanding balance—577,000*l*—of the Company's debt to the State. The money value of this concession is about 34,000*l* a year. Had it not been granted, the Company would have shown, for the half-year ending the 31st of Jan., a profit equal to a dividend on the shares of less than 1½ per cent. per annum. Under these circumstances, the directors would scarcely have felt justified in recommending any dividend at all. As matters now stand, they are enabled to declare a dividend for that half-year at the rate of 2 per cent. per annum, carrying forward a surplus of 9,617*l*. This liberal policy on the part of the Government may have some connection with the necessity under which they have lain of appealing frequently to the English money market.

At an extraordinary meeting of the Commercial Dock Company to-day, authority was given to the directors to transfer the sum of 51,441*l*, being part of the "rest" or reserve fund of 59,395*l*, to the capital account, thus increasing it to 565,851*l*, and to place to the credit of each shareholder, by way of bonus, a sum in ordinary stock equal in amount to 10 per cent. This sum will be dealt with as a portion of the additional capital authorised to be raised by the creation of new stock, by the Commercial Docks Act of 1857. The amount standing to the credit of the "rest" account after this arrangement is 7,954*l*.

The directors of the Chartered Mercantile Bank of India, London, and China, at a meeting held on Tuesday, declared a dividend of 5 per cent., free of income tax, for the half-year ending Dec. 31 last, making 10 per cent. for the year, and payable on the 26th instant.

The report of the directors of the Chartered Bank of India, Australia, and China says:—

The net profits on the bank's operations for the year ended 31st December last amount to 37,211*l* 7s 5d, and that after deduction of the interim dividend at the rate of 5 per cent., declared on 22nd September last, there now remains an available balance at the credit of profit and loss of 29,517*l* 12s 2d. Out of this sum the directors recommend a dividend (free of income tax) for the half-year ended 31st December last, at the rate of 7 per cent. per annum.

The prospectus of the Nerbudda Coal and Iron Company (Limited) is issued. This company is formed for the purpose of working certain mines of coal and iron at Mopani and Tendukera, in the Nerbudda Valley. The capital is fixed at 120,000*l* in 20*l* shares.

The latest prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 3⅛ to 3¾ prem.; Universal Marine Insurance, ¾ to ⅞ prem.; London and Provincial Marine Insurance, 3-16 to 5-16 prem.; San Paulo (Brazilian) Railway, ¼ to 3-16 dis.; Bank of Turkey, 1⅜ to 1⅛ dis.; City of London Brewery Preference, ½ to ⅝ prem.; Buenos Ayres and San Fernando Railway, 1⅛ to 1¼ prem.; and Nerbudda Coal and Iron Mining, ½ to ⅝ prem.

The Stock Exchange Committee have this day appointed next Tuesday a special settling day in the shares of the Buenos Ayres and San Fernando Railway Company.

An improvement has at length taken place on the Paris Bourse. The 3 per Cent. Rentes, which opened this morning at 67.90 (being the same as they closed yesterday), left off at 68.30, both for money and the account, showing a rise of ⅜ per cent. Compared with last week's prices, the advance is ¼ per cent. The distrust inspired by the forcible annexation of Savoy to France has been the chief cause of the dulness of the Bourse during the week. To-day's advance is attributed to the development of some new political feature of a favourable character.

The Savoy question has likewise weighed upon the English funds, the arbitrary character of the French Emperor's acts, and, more especially, his cavalier indifference to the protest of Switzerland, exciting general attention. Consols at one period fell to 94⅜ to ½. This afternoon, however, a rally was caused by the rise on the Paris Bourse, and Consols closed at 94⅞ to ⅞, for the 11th of April, or the same as on last Friday. Some *bonâ fide* sales have been effected this week, probably for account of bankers, who find that in the present state of the money market they can meet with full employment for their funds. The rate for short loans on Consols in the Stock Exchange is consequently as high as 4 per cent. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day :—

Although the improvement in the railway share market has been held in check by the dulness of Consols, the tendency of prices is still decidedly upwards. Midland stock has again been in extraordinary demand, and shows a fresh rise of no less than 2½ per cent. Great Northern has also risen 1½ per cent.; Lancashire and Yorkshire, 1¼ per cent.; North British, ¾ per cent.; and South-Eastern, ¼ per cent. On the other hand, Caledonian and Great Western have declined ½ per cent.; and North-Eastern, ¼ per cent. The market this afternoon was unusually buoyant, and closed with a very strong appearance. The rise in this class of property is based upon the most legitimate ground possible, viz., the continued large increase in the traffic. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day :—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.10 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is nearly 3-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3¾ per 1*l* sterling. Standard gold at the English Mint price is, therefore, at about the same price in London and Hamburg.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 109 per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

Imports of the week ..... 64,740 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

Very little English wheat was on offer at Mark lane, to-day, and nearly the whole changed hands, at an improvement in the quotations realised on Monday of 1s per quarter. Foreign wheat commanded the same advance, and numerous samples were withdrawn by the importers. There was a steady business doing in all kinds of Spring corn, at fully previous rates. Flour, both English and foreign, was the turn dearer. The imports, from abroad, this week, are again very limited, viz., 2,800 quarters of wheat, 2,700 barley, 40 sacks and 300 barrels of flour.

At Liverpool, this morning, wheat was 1d per bushel dearer, and other articles were firm in price.

The demand in the Liverpool cotton market during the week has been on an improved scale, the total sales amounting to 64,000 bales, of which spinners have taken 49,000 bales, exporters 10,000 bales, and speculators 5,000 bales. Quotations remain the same as on Friday last. To-day the market closes steady, with sales of 8,000 bales. In consequence of accounts from America received this week, reporting a decided falling off in the receipts, the market has been buoyant and very steady, in the face of the large stock and abundant supply of cotton, and holders have been very firm, desirous of seeing the effect produced upon the crop estimates. The quantity of low Surats on sale is very extensive.

We have received the following from Messrs Briggs and Co., of Alexandria. It is dated the 6th inst.:—

Sales since the 25th February to the 5th inclusive amount to 3,900 bales, with prices always tending to rise. During the last two days, arrivals from the interior have been larger than usual; good qualities continue very scarce. The following are about present value, per lb, free on board:—Ordinary to middling, 8.20d to 8¼d; fair to good fair, 8.57d to 9.20d; the highest price paid for good to fine being 10.30d. Freights, per steamer, 11-16d and 5 per cent.; and by ships, 9.32d and 5 per cent. Exchange commenced at 97¼, and finished at 97½ piastres per £ sterling. Export of cotton in bales from 17th February to 3rd March, 1860:—Great Britain, 5,883; France 983; total 6,866.

Messrs Volkart Brothers, of Bombay, whose communication is dated the 25th ult., state that the cotton market was very quiet at previous quotations. The total exports since the 1st of January were:—

	1860. bales.		1859. bales.
To Europe	82,552	.....	63,244
To China, &c.	20,422	.....	7,445
Total	102,974	.....	70,689
Being an increase	32,285		

Large public sales of tea have been held this week. On the whole, the biddings ruled steady, at, mostly, full prices. Privately, however, the market is inactive.

A commercial letter from Hong Kong, dated the 30th January, contains the following in reference to tea and silk:—

Tea has perhaps, without exception, been the dullest article to be brought under review. The fortnight has passed without a single transaction. The stock in the hands of teamen now amounts to 46 chops. Silk is again dearer. About 250 piculs have been taken for India, leaving 300 piculs on the market. Prices are however extravagantly high, and forbid operations for England. The crop of silk this year will also doubtless be short. Loongkong, No. 1, is quoted 425 dols to 430 dols; Loongkong, No. 2, 415 dols to 420 dols; Kowkong, No. 3, 400 dols to 405 dols; Cumchock, 440 dols. Fuhchau.—Considerable supplies of tea had been hurried down, which had weakened prices, causing a reduction of about 1 tael on common and 2 taels on the finer kinds of congou. The settlements from last mail to present comprise:—Congou, 4,820 chests at 13 to 23 taels; Oolong, 6,900 packages at 15 to 22½ taels; flowery pekoe, 146 chests at 28½ taels; scented O. pekoe, 2,600 boxes at 26½ to 27½ taels. The stock unsettled amounted to about 51,000 chests congou and 6,500 chests of Oolong. Shanghai dates are to 22d instant. Tea—Adverse accounts from home continued to exercise a depressing influence on the market. The settlements of black were small, and as the New Year was approaching, many of the dealers had withdrawn their teas rather than submit to the reduced offers of buyers. 4,700 chests only had changed hands. Ningchows at 26¾ taels to 27¾ taels; souchong, 25½ taels; common congou and Souchow packed at 15 taels to 19½ taels. The stock amounted to 53 chops. Green tea was also very dull, though prices were maintained. Silk displayed increased firmness, and altogether looked well for those who were fortunate enough to have any quantity afloat. There appears no doubt the crop will be very short. The total export to 20th instant shows a falling of close upon 12,000 as compared with the same period last year, the actual figures being 42,951 bales against 54,798 bales. The available stock did not amount to more than from 3,500 to 4,000 bales, and of this quantity very little was first quality. Prices showed a slight advance over those current the fortnight previous. No. 1 and 2 Taatlee, nominal; No. 3 Taatlee, 410 taels to 415 taels; No. 4 and 5 Taatlee, 360 taels to 400 taels; Tayeaams, No. 1, 370 taels to 385 taels; Tayeaams, No. 2, 350 taels to 355 taels; Tayeaams, No. 3, 330 taels to 340 taels; thrown, 340 taels to 415 taels.

Although there has been less activity in the demand for raw sugars, the quotations have ruled firm. Refined goods have supported previous rates. Advices from Havana to the 5th inst. state that the sugar market was heavy. The stock on hand was 115,000 boxes.

The coffee market has continued steady, but the amount of business doing in it has not been extensive. Extreme rates have been paid for cocoa, fine red Trinidad having sold as high as 101s per cwt.

Messrs Volkart and Co., of Ceylon, thus report the state of the coffee trade to the 15th ult.:—

Exporters of coffee continue to make considerable progress, as may be seen by the following statement:—

Plantation Coffee.				
To Great Britain	cwts 131,546	against last year,	cwts	100,372
Foreign Ports	10,522	—	—	20,332
Australia and India.....	4,418	—	—	4,905
	146,486			125,609
Native Coffee.				
To Great Britain.....	cwts 53,208	against last year,	cwts	21,745
Foreign Ports.....	20,537	—	—	65,987
Australia and India.....	493	—	—	9,672
	74,238			97,404

The crops of plantation coffee are nearly all in, and are, on the whole, above the average. The arrivals from estates are scarcely equal to last year, but fine weather enables shippers to keep their exports in advance of the former period. A few transactions only are reported in parchment at former figures. The quantity of native coffee on offer is limited, and there being some foreign orders in our market, rates have gone up slightly since our last advices.

Large quantities of rice continue to find buyers, at, in some instances, an advance in the quotations of 3d per cwt.

The saltpetre market may be considered steady, on former terms.

Messrs Hazard and Co. thus report the progress and close of the public sales of colonial wool:—

Of the wool brought forward a larger proportion than usual consisted of the new clip (notwithstanding the non-arrival of one or two considerable shipments overdue in time for the sales). Of this the Sydney wool generally was a fair average; many of the Port Philip flocks showed improvement in breed, and were in excellent condition. The South Australian, of which several of the best brands were sold, were nearly all in the grease, but the quality was good, and freer from grass seeds in many cases than last year: part of this was shipped via Melbourne, so as to ensure its arrival in time for the February sales. The assortment of Cape wool was various; some was good, showing continued improvement in breed and condition, while the rest was the reverse in every respect. Of New Zealand and Van Dieman's Land none of the new clip was received. Our next May sales will be larger than usual, owing to shipments having been made earlier than customary. We may, perhaps, then have to notice some slight decline on those descriptions which have most advanced these sales on account of the shortness of supply, but, with these exceptions, we think the prospects of the market are decidedly good.

The low wool sales—at which 4,589 bales were offered—went off somewhat briskly.

Rum has commanded rather more attention; but some forced sales of brandy have been made on easier terms.

The state of the Calcutta indigo market to the 8th ult. is thus reported by Messrs Moran and Co.:—

There is little or no change to notice in prices of indigo since the date of our last, although the demand has been rather unsteady. Oudes are now coming forward freely and are a shade cheaper, though not so to shippers, taking the advanced rate of exchange into consideration. The season is now fast drawing to a close, the quantity remaining unsold being not more than about 5,500 maunds, besides Oudes. Of the latter description there are about 800 chests of native manufacture in the bazaar, chiefly of very ordinary quality and very damp, which are held for prices not likely to be realised. We are glad to observe that known marks of Oudes are, on the whole, drier than we have seen them of late years. About 86,000 maunds of the crop are now disposed of. Exports of indigo from the 1st November, 1859, to the evening of the 7th current:—To Great Britain, 13,139 chests; Havre and Bordeaux, 4,376; foreign Europe, 43; America, 885; Gulf, &c., 1,193; sundry ports, 2—total, 19,638.

Scotch pig iron has been in improved request, and the price has advanced to 58s 6d. In other metals, only a limited business is passing.

Oils have changed hands to a fair extent, on former terms. The current rate for linseed oil is 28*l*.

Tallow continues dull, and sales of P.Y.C. on the spot, have been made to-day, at 57s 9d. The quotation for the last three months is 53s per cwt.

Messrs Cattley and Co., of St Petersburg, thus refer to the trade of that port in 1859:—

We have now to hand you lists of goods shipped from this port in 1859 Tallow—There is still some uncertainty as to the quantity likely to find its way to this port, but we estimate it at about 112,000 casks of new goods. Adding the wintering quantity, and the estimated yield of town tallow, and deducting the probable Petersburg consumption, we suppose the total for shipment may be ca. 135,000 casks. Hemp—There will, as far as we can judge, be less for shipment than in 1859. There remained over ca. 100,000 poods; the quantity brought down during winter by rail and expected during the next two months may be ca. 100,000 poods; by the barks we shall get 1,200,000, giving a total of 1,400,000 poods of hemp of 1857 and 1858 growth. Flax—It is difficult to estimate the supply with accuracy, but having taken some pains to get information on this point, we have arrived at the conclusion that, unless prices advance materially, we shall have much less than last year. Linseed—The crop of 1859 was not deficient in quantity, thought much inferior in quality to that of 1858. We estimate the new supply at 150,000 to 200,000 chets, and there remained over at the close of the navigation ca. 44,000 chets (including about 25,000 chets of very low Rjeff), but the great scarcity of hemp oil in this country has caused an unusual demand for linseed for account of Russian crushers, and very high prices have been

and still are, current in the interior. Exports of the chief articles from St Petersburg in 1859:—Tallow, 2,297,786 poods; hemp, clean 1,463,116 poods, outshot 181,310 poods, half-clean 222,215 poods; flax, 961,179 poods; tow, 249,143 poods; codilla, 147,906 poods; hides, 14,823 poods; deals, 298,360 at doz; linseed, 218,459 chets; grain, wheat 232,279 chets, oats 585,064 chets; ships, British 635, foreign 1,180.

There is, at length, a decided improvement in the freight market. Messrs Sharer, Lamb, and Co. state that "a considerable amount of Canadian business has been done, and the quotations are, in some instances, better. The Baltic trade is beginning to show signs of activity, and rates have risen, for tonnage has only been coming forward slowly. Coal freights to the Mediterranean, Brazils, and West Coast are all firm, both from Wales and the North, and in many cases are higher. From the Black Sea and Danube we have to report that a better feeling has been displayed, and engagements have been made a little beyond previous figures. There are a few openings on this side from the East Indian ports, for which, however, late ships are desired."

"Trade in general," observes the New York *Shipping List* of the 3rd inst., "moves on with moderate activity. We continue to hear of a brisk business with the South in the dry goods line, but from the West the orders, thus far, are "few and far between." Stocks of general merchandise have received material additions in the course of the week from two or three steamer cargoes, and the arrival of a numerous fleet of sail vessels from European, East India, and South American ports. The dry goods entries are moderate. The following shows the movement for the week, and since 1st January, compared with the previous two seasons:—

	1858.	1859.	1860.
	For the Week.		
	dols	dols	dols
Entered at the port.....	1,187,879	3,347,001	814,263

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

For Report of This Day's Markets, see "Postscript."

Mincing Lane, Friday Morning.

Sugar.—Although a steady demand has prevailed, the market shows much less animation than last week, and the full valuations have not in every case been obtained at the public sales, still general quotations remain unaltered. The new scale of duties will be levied in France on the 15th proximo; but some time may elapse before these changes can materially affect the European markets. Arrivals here keep moderate, yet liberal supplies of Mauritius have been brought forward, which all found buyers. West India is quiet, transactions in the three days reaching only 500 casks. Grainy Berbice and crystallised Demerara, by auction, went at 40s to 47s per cwt. The landings last week were 1,400 tons, and the deliveries 3,470 tons, consequently the stock at the close receded to 49,350 tons, against 46,000 tons at the same date in 1859.

Mauritius.—At the public sales, 16,710 bags all sold steadily at about previous rates: grey and yellow, low to fine, 39s 6d to 44s 6d; grainy sorts, 40s to 46s; crystallised, 41s to 46s 6d; low soft to good brown, 31s to 39s per cwt,

Bengal.—628 bags Cossipore syrups were taken in at 42s to 43s 6d per cwt. Other sorts have been quiet

Madras.—700 bags grocery brought 42s 6d to 48s for grainy yellow to white; soft, 40s to 42s. 1,230 bags of the lower qualities found buyers: soft date sorts, 28s to 32s 6d; native, brown and yellow, 32s 6d to 37s 6d. Jaggery has sold privately at 30s 6d per cwt, besides several parcels of native, &c.

Foreign.—Two floating cargoes of Pernambuco have sold at 25s 6d for this port; a cargo of old Havana is reported at 30s 9d for Antwerp, No. 15 to 15½; a cargo of white Maroim for Gottenburg at 30s 6d. On the spot, 7,000 bags unclayed Manilla have brought 32s 6d to 33s 6d. By auction, 534 casks Porto Rico were principally bought in at 40s to 46s. 402 casks Cuba partly sold: brown to good yellow, 38s 6d to 42s. 3,729 boxes Havana were taken at 41s 6d to 47s.

Refined.—Prices of dry goods have improved 6d per cwt in some cases, and the market presents a firmer appearance, although it is now quiet. To-day the common descriptions cannot easily be obtained under 52s. Crushed commands 49s to 51s, and pieces 42s to 47s per cwt. Bonded sugars are more steady, especially Dutch crushed.

Rum.—More inquiry has prevailed for Demerara at 2s to 2s 1d. A parcel of East India proof sold at 1s 6d per proof gallon. Jamaica remains unaltered.

Cocoa.—Few parcels have changed hands by private contract. Another arrival of Guayaquil has taken place. 437 bags of indirect import, offered yesterday, brought 70s 6d, and 50 bags Trinidad 80s to 101s per cwt for grey to good red.

Tea.—The large sales which commenced on Wednesday, included many parcels of damaged and sound tea, printed to be sold "without reserve," and the total quantity in the catalogues reached 31,560 chests. A large proportion of congou, per "Annandale," out of condition, went at the valuations. Otherwise the demand was generally inactive, and ½d to 1d easier rates occasionally accepted. Up to yesterday 21,600 packages had passed, 10,750 being sold.

Coffee.—The intended reduction of the French duties, and rumoured short crop of native, have given additional firmness to this market, and Ceylon is rather dearer. At the Netherland Trading Company's sale, yesterday, 330,000 bags Java went at the valuations to 1 cent advance, and sold with some degree of spirit. Rather limited supplies have been offered here. 328 casks, 206 barrels and bags plantation Ceylon sold as follows: good to fine, 77s to 90s; fine ordinary to good middling, 64s to 76s 6d. 1,056 bags native sold at 59s for good ordinary of old import to 61s for fair quality recently arrived. A large business has been done privately at 59s up to 63s. 278 barrels 210 bags Jamaica found buyers at 61s to 69s for good ordinary to low middling. 56 half-bales Mocha, of indirect import, part sold at 120s to 125s for short and long berry. A cargo of St Domingo has sold for the Mediterranean at 64s, and one of regular good firsts Rio at 55s 9d per cwt for a near port.

Rice.—Further large transactions have occurred this week at extreme rates to 3d advance, including common to good Necrancie Arracan at 8s 6d to 10s 1½d; low to good Rangoon, 8s 3d to 9s 10½d; old Bassein, 8s 10½d; fair Moulmein, 9s 6d; besides a few parcels white Bengal. By auction, 4,900 bags "weevily" Necrancie Arracan partly sold at 8s 9d. 12,000 bags middling to good Moulmein realised 9s 3d to 9s 9d. 1,000 bags old, of middling quality, were taken in at 8s 6d. 643 bags old white Bengal: good but rather dusty, went at 12s to 12s 6d. 2,033 bags Rangoon were taken at 10s to 10s 6d. 2,265 bags old pinky Madras were bought in at 9s 6d to 10s 6d, being above the value. 5,106 bags middling to good sold yesterday at 10s to 10s 6d.

Imports and Deliveries of Rice to March 17, with Stock on hand.

	1860.	1859.	1858.	1857.
	tons	tons	tons	tons
Imports	6000	5360	22570	11300

Exported	5810	4400	3310	11610
Stock	61810	81740	75900	46640

Spices.—45 cases mace partly sold at 1s 2d to 1s 6d for low to middling quality; and 32 cases brown nutmegs, small to middling mixed, 1s 6d to 2s 1d, being previous rates. 2,550 bags Zanzibar cloves sold at rather lower prices, but went off well, considering the large supply: very common to fair, 3⅝d to 3¾d; good, 4¼d to 4⅝d. Pimento remains dull. 208 bags went at easier rates: low to fair, 3½d to 3¾d per lb, 116 cases cassia lignea from China were bought in: pile 1 at 100s. 100 cases Malabar cinnamon were disposed of, the sound portion at 29s per cwt. Black pepper is not much inquired after, yet the market continues firm. 2,850 bags Singapore by auction went at 4d to 4¼d per lb for dusty to good, and partly sold. White is dull.

Sago.—Flour has been more in request at 15s 9d to 16s per cwt.

Saltpetre.—Moderate sales have been made at the closing prices of last week to a slight improvement thereon, and the market is now firmer. Bengal on the spot has sold irregularly, ranging from 41s to 44s for refraction 9½ to 4½. Some for arrival is reported at 43s to 43s 6d, with 1,200 bags in course of landing at 43s 6d per cwt, refraction 5 per cent., or the usual allowances.

Imports and Deliveries of Saltpetre to March 17, with Stock on hand.

	18	185	1858.	1857.
	tons	tons	tons	tons
Imported	3400	4500	1690	2640
Delivered	3030	3860	3120	2450
Stock	4200	3600	4960	2240

Delivered last week 320 tons.

Cochineal.—331 bags chiefly sold at full prices to a slight advance for good silvers: Honduras, 3s to 3s 8d; low small to middling black, 3s 6d to 4s 5d: Teneriffe silvers, 3s 4d to 3s 6d; blacks, 3s 7d to 3s 11d: Mexican black, 3s 7d to 3s 10d per lb.

Gambier.—700 bales heated sold by auction at 15s to 16s 9d per cwt, according to condition. Privately, little business has been done.

Dyewoods.—Redwood has sold at 5*l* 10s to 5*l* 12s 6d. 800 tons Lima wood were mostly bought in at 14*l* 5s to 15*l*; a portion sold at 12*l* 10s to 13s per ton.

Lac Dye.—Favourite marks and all good useful qualities continue firm, but the demand is by no means active.

Shellac.—The tendency of the market is still upwards. Sales have been made at 9*l* 10s for fine orange, and 8*l* 10s to 10*l* per cwt for good to fine button kinds.

Rubber.—A parcel of East India was bought in at 2s 2d per lb.

Metals.—Prices have been unsettled, and the markets quiet. Scotch pig iron, after receding to 57s for mixed numbers, closes at 57s 9d per ton. Bars and Welsh iron do not show any change. A sale of spelter is reported at 20*l* 17s 6d per ton. Some contracts have been made in foreign tin, and quotations remain unaltered, viz., Straits, 131s to 132s; Banca, 139s per cwt. English has not been lowered.

Hemp.—The enhanced rates required for Manilla prevent further business. Russian has been in active request. Clean Petersburg advanced to 29*l* to 29*l* 10s per ton. Jute continues quiet. At the public sales held yesterday, which comprised 3,226 bales, about half that quantity found buyers at the former value.

Linseed remains exceedingly firm at 50s to 53s 6d per quarter for East India. Black Sea and Azoff for shipment to the Autumn, quoted 50s per quarter, delivered here.

Oils.—Further business has been done in sperm at 100*l*. Olive is dull: Gallipoli, 61*l* 10s; other kinds, 54*l* 10s to 58*l* per tun. Cocoa-nut has been quiet; Ceylon, 42s; Cochin, 45s. Palm steady, at 46s for fine. There seems less desire to buy rape oil: foreign refined quoted 41s to 41s 6d; brown, 40s 6d; but 45s and 42s respectively is paid for delivery in the last six months. The linseed oil market remains steady, and sales have been made at 28s; for forward deliveries 28s 6d to 29s per cwt demanded.

Turpentine.—100 barrels rough sold during the week at 9s 1½d to 9s 3d. Spirits dull. American, 35s 6d per cwt.

Tallow.—Since last Friday the market has been quiet, and latterly very dull, the trade making limited purchases. This morning, first sort Petersburg Y.C. is quoted 57s 9d; for delivery in April to June, 54s 6d to 54s 9d; and for the last three months, 52s 9d per cwt. Town made continues in good supply.

Particulars of Tallow.—Monday, March 19.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—The market is dull, and only part of 6,117 bags Mauritius sold, at barely former rates in some cases. 816 bags Madras realised the previous value. 2,415 bags Bengal: good to fine grainy yellow, 45s 6d to 46s 6d; Gurpatta date, 40s 6d to 44s. 500 casks Barbadoes, of the new crop, were partly sold at 39s to 44s for yellow; the low lots, comprising dabs and brown, mostly taken in at 35s to 38s 6d per cwt. 1,000 hhds West India sold for the week.

COFFEE.—197 casks Courtallam realised 64s to 69s 6d; and 105 bags native Ceylon, good to fine, 62s to 64s 6d per cwt.

TEA.—The sales concluded to-day, and went off flatly.

OIL.—Palm partly sold at 46s to 46s 6d; Cochin cocoa-nut, 44s; Ceylon, 41s 3d to 42s per cwt.

TALLOW dull at yesterday's rates. 630 casks, by auction, found buyers at easier rates. South American, 58s; Odessa, 57s to 57s 6d per cwt. Town unaltered.

ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar opened very animated this week at an advance of 6d to 1s for low grocery lumps, but has been quieter since yesterday. Prices remain nominally the same. Other descriptions of goods much the same as the previous week. Nothing doing for export. In Dutch crushed some sales have been made in VO, 32s 9d tierces; B & H, No. 1, at 33s for ready goods in barrels; also 50 tons B & H, No. 1, and 100 tons B & H, No. 1, or VO, at 33s 1d for delivery in Holland April and May next, all in barrels; and in Belgian crushed R B B, 150 tons, 33s 1½d for forward delivery in barrels f.o.b. at Antwerp.

GREEN FRUIT.—Market not so good, and prices for all kinds lower. Some cargoes oranges, sold by Keeling and Hunt at public sale, went at a reduction of 2s per box. Lemons easier. Spanish nuts, 42s to 43s per barrel; Barcelona, 34s to 35s per bag, Valencia oranges are arriving out of condition, and sell in character.

DRY FRUIT.—The currant market is without any animation, but its chief characteristic is the firmness of holders. The only inquiry is for stuff at 30s, which is nearly exhausted. The clearances continue on a large scale, amounting now to 2,100 tons duty paid, since the alteration of duty. Raisins are neglected, though a fair inquiry exists from the Continent, and sales have been made for immediate shipment. Figs continue to attract attention at the present moderate rates.

COLONIAL AND FOREIGN WOOL.—The East India low wool sales, held yesterday and day before, went off at 1d per lb advance on East India. The low wool (excepting the Donskoi, which sold very cheap) also went well.

FLAX.—This article is unaltered in value.

HEMP.—The market is very firm, and a large business done this week, several hundred tons having been purchased for the French Government.

COTTON.—We are again without any reported sale of cotton this week.

SILK.—Our market is still quiet, but with little or no change in prices.

TOBACCO.—A fair demand has existed for all descriptions, and sales effected to some extent of middling and common sorts, at prices in favour of buyers.

LEATHER AND HIDES.—The leather trade maintains the same position of limited demand, with moderate supplies, and scarcely any change in value, which has existed for many weeks past. The transactions at Leadenhall on Tuesday were chiefly in dressing hides, shaved hides, light and middle weight English butts, calf skins, and horse hides. For heavy sole leather there was very little inquiry.

METALS.—There is no rally in business, operations continuing to be on the most cautious scale. Copper is mostly flat of sale, and the prices paid for ores by the smelters being very low, there appears a chance of prices being again reduced. Iron shows no change, the demand being short, but not more so than last week. Tin finds a good market, at stiff rates. Lead has become rather quieter in demand. Spelter is neglected, and prices are easier. Tin plates without change.

TALLOW.—Official market letter issued this evening:—

	s	d
Town tallow	58	0
Fat by ditto	3	0½
Yellow Russian	59	0
Melted stuff	41	0
Rough ditto	24	0
Greaves	16	0
Good dregs	7	0

Imports this week 274 casks.

PROVISIONS.

The butter market is somewhat lower, partly owing to the large quantities of foreign that is now being sent, and partly to the dulness of trade. Very little business in bacon done; most of the London houses having brought forward last week for this and following week. The shippers are still very firm, although the trade has been bad, they having large quantities already sold sufficient to employ them for some weeks.

METROPOLITAN CATTLE MARKET.

THURSDAY, March 22.—Although only a moderate supply of beasts was on offer in to-day's market, the demand for all kinds ruled heavy, and, in some instances, prices gave way 2d per 8 lbs compared with Monday. The show of sheep was tolerably good, and the mutton trade was very inactive. In the quotations, however, no change took place. We have to report a dull inquiry for lambs, at barely stationary prices; but for calves there was more inquiry, at extreme currencies.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	6	5	8
Second quality ditto	3	8	3	10	Large coarse calves	4	8	5	0
Prime large oxen	4	0	4	4	Prime small ditto	5	2	5	6
Prime Scots, &c.	4	6	4	8	Large hogs	3	6	3	10
Coarse and inferior sheep	3	8	4	0	Small porkers	4	2	4	10
Second quality ditto	4	2	4	8	Suckling calves...each	19	0	22	0
Prime coarse-woolled do.	4	10	5	2	Quarter old store pigs	22	0	29	0

Lambs, 5s 8d to 6s 8d.

Total supply—Beasts, 957; sheep, 4,300; calves, 170; pigs, 250.
Foreign supply—Beasts, 110; sheep, 600; calves, 90.

HOP MARKET.

BOROUGH, Monday, March 19.—The settlement of the question of duties has not at present improved the character of our market, which remains in the same inactive state as of late. Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

FRIDAY, March 23.—The demand for hops is steady, at full prices.

POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, March 19.—During the past week the arrivals have been more than equal to the demand, and trade continued dull, particularly for all second-rate sorts. The following are this day's quotations:—York Regents, 90s to 140s; Lincolnshire ditto, 80s to 95s; Dunbar ditto, 100s to 120s; ditto reds, 90s to 100s; Perth, Forfar, and Fifeshire Regents, 80s to 100s; ditto reds, 75s to 85s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

THURSDAY, March 22.—The arrivals of potatoes coastwise and by land conveyance have been moderate since our last report. Trade fair, at the following rates:—York Regents, from 140s to 160s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto Cups, 90s to 100s; Dunbars, 100s to 105s per ton.

HAY MARKETS.—THURSDAY.

SMITHFIELD.—Meadow hay, 2*l* 15s to 4*l* 10s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 10s per load. A fair supply.

CUMBERLAND.—Meadow hay, 2*l* 16s to 4*l* 10s; clover, 4*l* 0s to 5*l* 5s; and straw, 1*l* 6s to 1*l* 10s per load. Trade steady.

WHITECHAPEL.—Meadow hay, 2*l* 15s to 4*l* 10s; clover, 4*l* 0s to 5*l* 10s; and straw, 1*l* 6s to 1*l* 10s per load. Supply good, and trade firm.

COAL MARKET.

WEDNESDAY, March 21.—Bell's Primrose 13s—Chilton Hartley Steam 15s—Holywell 16s—Tanfield Moor 12s 9d—Tanfield Moor Bute's 12s 9d—Wylam 16s 6d. Wall'a-end:—Harton 19s 3d—Northumberland 17s 6d—Bell 19s—Braddyll's Hetton 20s 6d—Framwellgate 19s 6d—Haswell 21s 6d—Lambton 21s 6d—Cassop 21s—Heugh Hall 19s 6d—South Hartlepool 20s 3d—South Durham 19s 6d—Trimdon Thornley 17s 3d—Thorpe 20s 6d. Ships at market, 39; sold, 36.

LIVERPOOL MARKETS.

WOOL.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 23.—There is a steady business doing, and holders are very firm in their demands, as the stocks of all useful descriptions of foreign continued to be of very small extent.

CORN.

(FROM OUR OWN CORRESPONDENT.)

FRIDAY, March 23.—Grain market moderately attended. Good business in wheat, at 1d above Tuesday's rates. Flour also in fair demand, and a turn dearer. Indian corn and beans without change. Oats and oatmeal in good request, at a slight advance.

The Gazette.

TUESDAY, March 20.

BANKRUPTS.

J. H. Redstone, late of Cowes, fishmonger.
F. W. Milburn, Westbourne park villas, boarding house keeper.

EPITOME OF RAILWAY NEWS.

TRAFFIC RECEIPTS.—The traffic returns of railways in the United Kingdom for the week ending March 10 amounted to 456,480*l*, and for the corresponding week of 1859 to 418,220*l*, showing an increase of 38,260*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 189,118*l*, and for the corresponding week of last year to 178,461*l*, showing an increase of 10,657*l*.

GREAT WESTERN OF CANADA.—The directors intend to recommend to the shareholders at the approaching meeting, that a dividend be declared at the rate of 2 per cent. per annum on the share capital, out of the profits of the last half-year ending January 31, 1860, which will leave a surplus balance to be carried to the credit of the current half-year of 9,617*l* 15s 11d.

GREAT NORTH OF SCOTLAND.—The report of the directors states that the revenue account for the half-year ending the 31st of January last shows that 40,280*l* had been received, and 20,718*l* expended, including 5,468*l* for interest on loans and commision, leaving a balance of 19,562*l*. The proposed dividend, at the rate of 4½ per cent. per annum on the new preference shares, at the rate of 6 per cent. per annum on the preference stock, and at the rate of 6 per cent. per annum on the original stock of the company, would absorb 19,279*l*, and leave 283*l*. The working expenses for the half-year amounted to 38 per cent. of the gross receipts, as compared with 40 per cent. for the 11 months ending July last.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, March 19.—The railway market was inactive, and closed with little variation from the prices of Saturday. In several cases, however, a fractional recovery took place, and the market generally presented a firmer appearance. In foreign shares, Pernambuco were firmer on the announcement of the new loan, leaving off 1¼ to 1 dis.; Bahia closed ¼ to ⅛ dis.; and San Paulo, ⅜ to ½ dis. Mines were in better demand, and in several cases showed an advance. No change of importance occurred in joint stock banks. In miscellaneous descriptions, Red Sea Telegraph were quoted higher at ½ premium, while Canada Land declined.

TUESDAY, March 20.—The railway market closed at a nearly general advance; the tendency after official hours was especially good. The principal improvement took place in the heavier stocks, particularly London and North-Western, Midland, Lancashire and Yorkshire, and South-Eastern. The transactions in the colonial market were rather larger than usual. Great Western of Canada left off 12 to ⅛, and Grand Trunk 34½ to ¾. Atlantic and St Lawrence declined. Foreign shares were in little demand, and generally closed the same as yesterday. Late in the afternoon, however, Lombardo-Venetian improved to 1⅛ to ½ pm. Pernambuco were last quoted 1½ to 1 dis., and San Paulo ⅜ to ½ dis. American railway bonds were firmer, especially those of the Michigan Central. Mining shares, on the other hand, were rather depressed.

WEDNESDAY, March 21.—The principal movement in the railway market to-day was a rise in Great Northern A stock, Grand Trunk, and Great Western of Canada The former left off 109 to 111, or between 2 and 3 per cent. higher. Other British stocks showed little variation, except Great Northern ordinary, which improved ½ per cent. to 110 to ½, and South-Eastern, which receded ⅜ to 88½ to ½. The announcement of the Great Western of Canada dividend, and the expectation of a large increase in the traffic on the visit of the Prince of Wales, stimulated the demand for Canadian descriptions, and an improvement took place of 1 per cent. in Grand Trunk stock, and of about 15s in Great Western shares. Indian guaranteed were generally steady. In the foreign market, Lombardo-Venetian were dull at 1¼ to ⅜ pm., and San Paulo firmer at ½ dis. American securities were in better demand. Mines were dull, and, in several cases, showed a reduction.

THURSDAY, March 22.—A general advance took place in the railway market this morning, but the rise was not fully maintained to the termination of business. Another improvement was established in Canadian descriptions, Grand Trunk closing at 36 to ½, and Great Western 12. Buffalo and Lake Huron were also better. In the foreign market there was a fractional rise in Pernambuco. Bahia left off ¼ dis. to par, and San Paulo ¼ dis. The shares of the Illinois Central and New York Central improved. There was few transactions in mines, and no change of importance occurred. Bank of Australasia shares were heavy. In miscelaneous descriptions, Canada Land advanced 2*l*; and London General Omnibus was slightly firmer. The new Canadian loan was last quoted 1⅜ to ⅝ pm. acrip, and 100½ to ¾ bonds; Ocean Marine Insurance, 3⅛ to ⅜ pm.; Universal, ⅜ to ½ pm., London and Provincial, ¼ to ⅜ pm.; and Bank of Turkey, 1⅛ to 1¼ dis.

FRIDAY, March 23.—Business in British railway stock was limited, but a general advance of ¼ to ½ per cent. took place. Midland is especially firm. London and North-Western stock was quoted 98 to ¼; Great Western, 68½ to 69; Midland, 113 to ½; Lancashire and Yorkshire, 101¼ to ⅜; South-Eastern 88½ to ¾; Great Northern, 111½ to 112; and Eastern Counties, 55½ to ¾. Lombardo-Venetian railway shares were quiet, at 1¼ to ⅜ prem. San Paulo quoted the same as yesterday, at ¼ dis. The late rise in Canadian descriptions was steadily maintained.

THE ADELPHI THEATRE.—The well-known comedy of the "Jealous Wife" was revived on Thursday evening at the Adelphi. Mr and Mrs Wigan took the principal parts; and all who remember the play may guess how well they filled them. The successful farce, "The Bengal Tiger," was also played in the course of the evening.

TRADE MARK.

BROWN AND POLSON'S

PATENT CORN FLOUR.—The LANCET states, "This is superior to anything of the kind known."—It is respectfully announced that to any application by letter, Brown and Polson forward the address (for any village or town in the Three Kingdoms) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as Brown and Polson's," if the name, address, and designation are kindly communicated, such confidence will be greatly appreciated.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, and 23 Ironmonger lane, London.

OVERLAND ROUTE.—COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Reunion, Ceylon, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NEW LINE OF STEAM PACKETS from LIVERPOOL to the BRAZILS.—The fine new first-class and powerful Screw Steamer ERNST MERCK, Captain Anderesen (900 tons register, 200 horse power), is appointed to sail on the 24th April from Liverpool, with cargo for Bahia and Rio de Janeiro, touching at St Vincent and Pernambuco to land passengers, parcels, &c., if required.

This magnificent steamer is the pioneer of a new line from Liverpool to the Brazils, and, to insure success, moderate rates of freight and passage money will be charged—has only made one trip from London to Brazil and back, but, for the greater convenience of the Brazil trade, this and future steamers will make Liverpool their starting and delivery port. She is just out of the hands of the engineers and surveyors, after being thoroughly overhauled and made perfectly efficient in every respect.

This line of steamers being under contract, are all engaged, under heavy penalty, to make their passages within a certain number of days, including stoppages, and the screw of the Ernst Merck being a fixed one, renders imperative continuous steaming at sea, thus insuring to passengers and shippers a speady and sure conveyance.

Proper forms of bills of lading for these steamers can only be obtained from Messrs Turner and Dunnett, stationers, 4 James' street. All goods to be alongside twenty-four hours before the date of sailing. Full particulars will be given in a future advertisement.

Apply to, in London, Messrs Windsor Brothers, 115 Leadenhall street; in Glasgow, Messrs J. and R. Young and Co., 107 Buchanan street; in Manchester, Mr J. J. Radford, South parade, St Mary's; in Hamburg, Messrs Cellier and Parrau; in Antwerp, Messrs Grisar and Marsilly; in Havre, Messrs Soubry and Gresos; and in Liverpool to Nuttall, Mora, and Co., 18 Chapel street, Agents for this line.

Liverpool, March 20, 1860.

NOTICE.—The Steamers for Halifax and Boston call at Cork Harbour, on both outward and homeward passages, to land and receive Mails, and on and after the 31st of March the New York steamers will also call at Cork, on both outward and homeward passages, to receive and land Mails.

BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS, appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and Her Majesty's mails. The following, or other vessels, are appointed to sail from Liverpool:—

PERSIA, for NEW YORK direct, Saturday, March 31.
AMERICA, for BOSTON, Saturday, April 7.
*AFRICA for NEW YORK direct, Saturday, April 14.
*Taking Passengers and Goods for Nassau and Havana to be transferred at New York on board R. M. S. S. Karnak.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, 8 Water street, Liverpool.

*** IMPROVED ACCOMMODATION FOR PASSENGERS LANDING AND EMBARKING AT ST KATHARINE'S WHARF.—An additional and separate entrance, leading direct to and from the steamers alongside the wharf, with waiting-rooms attached, has been provided for the use of passengers only, by which all confusion and inconvenience arising from the goods traffic is avoided.

STEAM SHIPS.—The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

HAMBURG—Every Wednesday and Saturday. Chief cabin, 2l; fore, 1l 5s.

Offices 71 Lombard street, 37 Regent circus, and Leadenhall street; and St Katharine Wharf.

IMPORTANT STANDARD BOTANICAL WORK
WITH NATURE-PRINTED PLATES.
Complete, price 6l 6s, half-bound, in Imperial Folio, with 51 plates,

THE FERNS OF GREAT BRITAIN and IRELAND. Nature-Printed by HENRY BRADBURY. With full descriptions of the Species and Varieties, by THOMAS MOORE, F.L.S.; Edited by Dr LINDLEY.

"This magnificent folio is the first-fruits of the Nature-printing process in this country. Those who have made the study of Ferns the recreation of their leisure hours will be delighted with this volume, not only as representing their old favourites in a truly living form, but on account of the great attention given to the representation of varieties, and the appearance of the plants in every stage of their development. Nothing is more puzzling to the young botanist than the varieties of form which the same species of Fern assumes according to locality and other circumstances. These cannot be made evident by descriptions alone; and certainly in no instance has any author ever attempted to illustrate so large a number of varieties of Ferns as are found here. Of the way in which they are Nature-printed in this book, we can safely say they are better done than anything of the kind we have seen before. Such beautiful representations of natural objects deserved good illustrative letter-press, and in the services of Mr Moore and Dr Lindley, Mr Henry Bradbury has enjoyed the aids of competent science. The description of the species, the synonyms, and the general remarks, are more extended than in any work hitherto devoted to the British Ferns. —ATHENÆUM, April 27, 1857.

Bradbury and Evans, 11 Bouverie street.

WOOD ENGRAVING.—MR GILKS respectfully announces that he continues to execute every branch of the Art in the best style, and at the most reasonable charges. Labels, Show-cards, and Trade Catalogues Designed and Printed.—London, 2 Essex street, Strand. W.C

ON SPINAL AND OTHER DEFORMITIES.

PRACTICAL OBSERVATIONS on the CAUSES and TREATMENT of CURVATURES of the SPINE. Third edition, price 6s.

AND

Just published, second edition, price 1s 6d,

CASES and OBSERVATIONS illustrative of the beneficial results which may be obtained by close attention and perseverance, in some of the most unpromising instances of Spinal Deformity; with numerous Engravings. By SAMUEL HARE, F.R.C.S., &c.

"Mr Hare may take credit to himself for having effected much good in the treatment of the cases described."—BRITISH MEDICAL JOURNAL.

"Mr Hare is, we think, a sound and successful practitioner."—MEDICAL CIRCULAR.

"We unhesitatingly commend this work as a truthful and trustworthy statement of the power of scientific surgery and medicine over some of the most grievous hindrances to human activity and industry."—MEDICAL GAZETTE.

"The author has had much success in his plan of treatment, and we are of opinion that the principles on which he acts, in the treatment of these affections, are correct."—LANCET.

London: John Churchill; and may be had of al booksellers.

KEATING'S PALE NEWFOUNDLAND COD LIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomas's Hospitals, who, in the words of the late Dr Pereira, say, that "The finest oil is that most devoid of colour, odour, and flavour," characters this will be found to possess in a high degree. Half-pints 1s 6d, Pints 2s 6d, Quarts 4s 6d, and Five-pint Bottles 10s 6d, Imperial Measure.

St Paul's churchyard, London.

RUPTURES.—BY ROYAL LETTERS PATENT

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr WHITE, 228 Piccadilly London.

Price of a single Truss 16s, 21s, 26s 6d an 31s 6d; Postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to ohn White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases o WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price rom 7s 6d to 16s each; postage, 6d.

WHITE, MANUFACTURER 228 Piccadilly, London

NO MORE MEDICINE.—For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.

DU BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD—Certificate No. 86,418. In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (Indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and incipient Consumption, we find it the safest remedy. Dr Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Shorland; Dr Campbell.

At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, indecision, nervous fancies, palpitation, heartburn, eruptions, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, diabetes, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, hœmorrhoids, also children's complaints, and saves fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. We extract a few of many thousand cures:

Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Joly, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted all baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 54,816.—From the Rev. James T. Campbell, Syderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.

Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 35s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., 182 Piccadilly, London; Abbis, 60 Gracechurch street and all grocers and chemists.

COCOA.—TAYLOR BROTHERS' PATENT LENTILIZED COCOA is pronounced by Professor Letheby and Dr Hassall to be superior in nutritious element to all others. See their reports, printed on the labels of each canister. Sold by all grocers at 1s 6d per lb.

DEANE'S TWO-HOLE BLACK PENS which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped

"G. and J. Deane, London Bridge,"

and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed

"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DINNEFORD'S

PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.

Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

HOLLOWAY'S OINTMENT AND PILLS.—In all sores, wounds, and sprains, Holloway's ointment is the most effectual application. It at once gives ease by allaying inflammation and moderating the flow of blood to the part. Whenever the malady has been of long duration, the ointment should be assisted by Holloway's purifying pills, which act upon the stomach and liver; guarding digestion from falling into that disordered state, which the pain, restlessness, and fever attending these ailments, is apt to produce, and which much retards recovery; and sometimes even makes serious the slightest case. No mother or nurse should want these noble remedies, equally applicable to all ages and constitutions. They purify the blood, regulate its circulation, renew diseased structures, and invigorate the system.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies PATENTED INCORRODIBLE TEETH, without extracting Teeth or stumps, on his never-failing and painless principle of SELF-ADHESION, rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his OSTEOPLASTIC Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

Post free for Two Stamps.

EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq., M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

GIVEN AWAY.—26,000 COPIES of a Medical Book, for the benefit of Nervous Sufferers, sent, post free, by the author, secure from observation, on receipt of a directed envelope, enclosing two stamps, the Private Medical Friend, a new work on the Self-cure of Nervous Debility, Loss of Memory, Dimness of Sight, Lassitude, Indigestion, Dislike to Society, &c., which, if neglected, result in consumption, insanity, and premature death, with plain directions for perfect restoration to health and vigour. The true guide to those who desire a speedy and private cure.—By HENRY SMITH, Esq., 8 Burton crescent, Tavistock square, London, W.C.

THE HUMAN HAIR

Just published, price 1d, the 76th edition of

GRIMSTONE'S THREE MINUTES ADVICE on the Growth, Cultivation, and Preservation of the Human Hair. This unique little work contains two engravings and many letters of undoubted authority, proving Grimstone's Aromatic Regenerator to be the only article that will produce a new growth of human hair, eyebrows, moustachios, whiskers, with a new growth of hair upon bald places. Sold in triangular bottles, 4s, 7s, and 11s. This size contains four of the 4s size; by post 12s, case and postage included

Grimstone's Eye-Snuff for exportation. Sold in Jars 8s per lb; or in Tin Canisters, 8d, 1s 3d, 2s 4d, 4s 6d and 8s 6d. His Medicated Eye-Snuff, samples 1s 1½d 2s 9d, and 4s 6d. This snuff is intended for Ladies or Gentlemen who are not Snuff Takers. All letters to William Grimstone, merchant, 52 High street, Bloomsbury.

Certain Means of Self-Cure Gratis.

THE NEW FRENCH REMEDY as prepared by the ECOLE PHARMACIEN, PARIS, has been used by the most eminent of the Medical Faculty on the Continent for several years, with great success, and has been found a certain remedy for effectually restoring the Nervous and Debilitated to a state of vigorous Health and Manhood, when the Nervous System has been weakened by the Errors of Youth, or from any other cause. All Impediments to Marriage are speedily removed by this wonderful discovery. Full particulars forwarded gratuitously to any address, with every instruction for SELF-CURE, on receipt of a stamped directed envelope, by MONS. DUVAL, Patent Medicine Agent, Birmingham.

Just published, in 1 vol. 8vo, with numerous Anatomic Plates, post free, on receipt of six penny stamps,

VITA VITALIS: A New Medical Work on the Nature, Treatment, and Cure of Spermatorrhœa, and other Urino-Genital Diseases, and consequent exhaustion of the Nervous System, caused by the errors of Man in youth and age, producing a degeneracy of Mental and Physical Strength, terminating in debility of the generative organs and Incapacity for Married Life, showing why these Diseases so often appear incurable when in reality they can be effectually removed by the most simple means, together with the Author's remedies for preventing infection.

By A PHYSICIAN, &c., &c.

(Registered under the New Medical Act).

Address, Medicus, 19 Berners street, Oxford street, London. Sold by Jas. Allen, 20 Warwick lane, Paternoster row; and all booksellers in town or country.

MEDICAL ADVICE.

DR LA'MERT, REGISTERED L.S.A., Honorary Member of the London Hospital Medical Society, M.D. of the University of Erlangen, &c., may be CONSULTED on all cases of Debility, Nervousness, and the Secret Infirmities of Youth, and Maturity, from 11 till 2, and from 6 till 8, at his residence,

37 BEDFORD SQUARE, London.

Dr La'Mert has just published, price Sixpence, with numerous Engravings and Cases, a New Edition of his Work, entitled,

SELF-PRESERVATION

which will be sent free in a sealed envelope. Mann, 39 Cornhill, London, or by the Author to any address, for eight stamps.

SECTION IV.—Spermatorrhœa and Impotence—The Causes of Sterility in both sexes—Self-inflicted miseries.

SECTION V.—The Vices of Schools—Effects of certain pernicious habits on the mental and generative faculties—Importance of Moral Discipline.

SECTION VI.—Treatment of nervous and generative debility—Impotence and sterility—Dangerous results of various hazardous specifics—The Author's principles of treatment; medical, dietetic, and general, derived from twenty years' successful practice.

TO THE NERVOUS AND DEBILITATED.

Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,

MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.

CONTENTS.

INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.

CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.

CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.

CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.

CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.

The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.

MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.

Consultations from 10 till 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so merally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It hat loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, id Gas under every form.

CAUTION.—Tha Officers of the H. E. I. Company are requested to observe that HUBBUCK'S Zinc Paint upplied them for years, is totally different from what has lately been sent out for the Company's Service in India, at being obtained by public competition among the Paint Grinders at a less price than tha raw metal could be ught for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES of the SKIN, RICKETS, INFANTILE WASTING, and all SCROFULOUS AFFECTIONS, is incomparably superior to every other kind. The recorded investigations of numberless eminent British and Foreign medical practitioners have placed beyond the reach of refutation the fact that no invalid can possibly realise the full beneficial effects of Cod Liver Oil, who does not take Dr de Jongh's celebrated pure Light Brown Oil.

Opinion of EDWIN LANKESTER, Esq., M.D., F.R.S., Late Lecturer on the Practice of Physic at St George's Medical School, Superintendent of the Food Collection at the South Kensington Museum, &c., &c.

"I believe that the purity and genuineness of this Oil are secured in its preparation by the personal attention of so good a Chemist and intelligent a Physician as Dr de Jongh, who has also written the best medical treatise on the Oil with which I am acquainted. Hence I should deem the Cod Liver Oil sold under his guarantee to be preferable to any other kind, as regards genuineness and medicinal efficacy."

Sold ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4s 9d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.

SOLE CONSIGNEES,

ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

FENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s: Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 20s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 6s per dozen; Desserts, 5s; Carvers, 2s 3d per pair; Black Horn Table Knives, 7s 4d per dozen; Desserts, 6s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—

The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.			Thread or Brunswick Pattern.			Lily Pattern.			King's or Military, &c.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

A TOILETTE REQUISITE FOR

THE SPRING.—Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of ODLRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A Oldridge, 13 Wellington street north, Strand, W.C.

FLUID BLACK WRITING INK—

never thickens in the inkstand, permanently jet black, and produces copies by the machine—recommended for rapid writing, and adapted to climates of extreme heat or cold—in stone bottles, pints 12s dozen, quarts 24s; or packed in casks for exportation or the country, one dozen quarts 25s, two dozen 50s, three dozen £3 12s 6d.

NISSEN and PARKER, Engravers, Printers, Accounts Book Makers, Manufacturing and Exporting Stationers, 43 Mark lane, London.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows:—"This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

LILLE COLZA OIL

for MODERATOR LAMPS, 4s and 4s 6d per Gallon. It being essential in order to obtain brilliancy of light to have Oil that is perfectly bright and pure,—most especial care is taken by

WHITMORE and CRADDOCK

in selecting only from the finest parcels imported into this country, and they guarantee its delivery in precisely the same fine condition as when drawn from the tanks at Lille. Its burning qualities are unsurpassed by any known Oil at present in use. Delivered free of charge, anywhere within six miles, and by railway in casks of 15 gallons each and upwards.

WHITMORE and CRADDOCK.

The City Oil and Candle Depot, 16 Bishopsgate street within, London, E. C. Lists free.

ELECTRO-SILVER PLATE.—

The largest and most varied Stock in London of Elegant Dinner, Tea and Coffee Services, Urns, Kettles, Dish Covers, Side Dishes, Trays, Waiters, Presentation Plate, &c., is on view in the splendid show-rooms of the Panklibanon General Furnishing Ironmongery Company, 56 and 58 Baker street. Public attention is particularly invited to the following list of prices, which may be taken as an index to the whole:—

	Fiddle Pattern.			Double Thread.			King's Pattern.		
	£	s	d	£	s	d	£	s	d
Table Spoons..per doz.	1	11	6	2	2	0	2	10	0
Dessert ditto	1	3	0	1	10	0	1	15	0
Table Forks	1	11	6	2	2	0	2	10	0
Dessert ditto	1	3	0	1	10	0	1	15	0
Tea Spoons	0	15	0	1	0	0	1	5	0

A single article at the same rate. Tea and Coffee Services from £4 4s; a set of four Dish Covers, £10; a set of four Corner Dishes, forming eight Dishes, £8. And some beautiful articles for presentation of the most artistic designs, and of first-rate quality and finish. Old silver bought or taken in exchange. Electro-Plating and Gilding done on the shortest notice. Illustrated books sent free.

N.B. Colza oil, finest quality, 4s per gallon.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality.			Medium Quality.			Best Quality.		
Two dozen full-size Table Knives, ivory handles	£ 2	s 4	d 0	£ 3	s 6	d 0	£ 4	s 12	d 0
One-and-a-half dozen full-size Cheese do	1	4	0	1	14	0	2	11	0

One Steel for sharpening	0	3	0	0	4	0	0	6	0
Complete Service	4	14	6	6	18	6	9	16	6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III, c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,

MAPPIN BROTHERS,

Queen's Cutlery Works, Sheffield; and 67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

ASTLEY'S ROYAL

AMPHITHEATRE.

Proprietor, Mr Wm. Batty.

In announcing the RE-OPENING on EASTER MONDAY, April 9th, of this far-famed Amphitheatre, again under his own management, Mr Batty feels proud in calling to mind the widely-extended and flattering patronage, including even that of Her Most Gracious Majesty the Queen; and which patronage, during his former period of catering for the public amusement, was at all times so lavishly bestowed. During the recess, the interior of the Amphitheatre has been entirely redecorated and embellished, and surrounded with costly and unique lustres, and a new gigantic and most beautiful centre crystal chandelier, manufactured by Defries and Son, of Houndsditch. The whole energy of the proprietor has been directed to gathering together, in one body, celebrities both dramatic and equestrian, who have each achieved success. He has not hesitated to expend immense labour and capital in its accomplishment, and looks, with hope, for the fullest patronage of the public.

*** In active preparation, a New Grand Military Spectacle, founded upon the French drama, "L'Histoire d'un Drapeau," (now performing, with great success, in Paris), and entitled THE HISTORY OF A FLAG.

THE GREAT EXHIBITION OF 1851

—Council Medal, Exposition Universelle, 1855—Grande Medaille d'Honneur.—Gallery of Bronzes d'Art. —F. EAST INDIAN RAILWAY COMPANY.—F EXTENSION and JUBBULPORE SHARES (£10 paid).

Notice is hereby given, that, in pursuance of a resolution passed at a meeting of the Board of Directors held this day, the proprietors of F Extension Shares and of Jubbulpore Shares in the East Indian Railway Company are required to pay a Call of £5 per share on each of their respective shares, on or before the 27th day of April, 1860, at the Public Drawing-office of the Bank of England.

Notice is hereby further given, that proprietors whose calls are not paid on or before the day named, will be charged with interest at the rate of 5 per cent. per annum on the amount called upon each share for the time the said call may remain in arrear, and will incur a loss of interest on the same amount for the period intervening between the 27th day of April aforesaid, and the date at which the Company is entitled under the contract to make the next payment to the Secretary of State for India in Council on account of the capital and that, if default is made in payment of this call, the shares in respect of which default is made will become liable to forfeiture under the Company's deed of settlement.—By order of the Board,

D. I. NOAD, Secretary.

Alderman's walk, London, March 13, 1860.

THE OAKERTHORPE IRON AND COAL COMPANY (Limited).

Registered 25th November, 1859.
Offices, 8 New Broad street, London, E.C.

Capital, £120,000, in 12,000 shares of £10 each to be paid up by five calls of £2 each; the first to be paid down and the remainder at intervals of two months.

The object of the company is the working of the mines of ironstone and coal under the Oakerthorpe estates in the parish of Wingfield, in the county of Derby.

The profits of the company it is estimated will be fully equal to 15 per cent. per annum on the capital employed.

The general management of the concern has been placed in the hands of Messrs Woodhouse and Jeffcock, of Derby, and the management of the furnaces in the hands of Mr William Evans, late of the Dowlais Iron Works, Merthyr Tydvil.

A large number of shares have been allotted. Applications for the remaining unallotted shares should be addressed either to Edward Corry, Esq., the Secretary pro tem., at the offices of the Company, 8 New Broad street, London; to Messrs Woodhouse and Jeffcock, Derby; to the solicitors, Messrs Stuart and Baly, 6 Gray's inn square, London; to Mr John Smith, Bennett's hill, Birmingham; Mr Robert McEwen, Ducie buildings, Manchester; Messrs T. Earp and Son, Derby; or Messrs F. E. and S. Smith, Sheffield; from either of whom prospectuses and printed forms of application or shares may be obtained.

VOLUNTEER PIPE.—

RIFLE BORE.—The most delightful, economical, and permanent medium for the enjoyment of tobacco ever invented. This new pipe only to be had at the "Waterloo" Tobacco and Pipe Establishment, 193 Waterloo road, S.—Sample pipe in case sent post free for 23 stamps.—EDWARD PILLINER, Patentee.

EQUITABLE ASSURANCE OFFICE,

New Bridge street, Blackfriars.
Established in 1762.

The amount added to the existing policies for the whole continuance of life at the decennial division of profits in December last, was One Million Nine Hundred and Seventy-seven Thousand Pounds, making, with former additions then outstanding, a total of Four Millions and Seventy Thousand Pounds, which amounts to 67 per cent. on the sums originally assured in all those policies.

The Bonuses paid on claims in the 10 years ending on the 31st December, 1859, exceed

THREE MILLIONS AND A HALF,

being more than 100 per cent. on the amount of all those claims.

The Capital, on the 1st November, 1859, £6,400,000 sterling.

The Income exceeds £420,000 per annum.

Policies effected in the current year (1860) will participate in the Distribution of Profits ordered in December last, so soon as Six Annual Premiums shall have become due and been paid thereon; and, in the division of 1869, will be entitled to additions in respect of Every Premium paid upon them from the years 1861 to 1869, each inclusive.

The EQUITABLE is an entirely mutual office, in which Two-thirds of the clear surplus is decennially divided among the policy holders, and One-third reserved for Security and as an Accumulating Fund, in augmentation of other profits, for future periodical distribution.

No extra premium is charged for service in any Volunteer Corps within the United Kingdom during peace or war.

A Weekly Court of Directors is held every Wednesday, from eleven to one o'clock, to receive proposals for New Assurances; and "a Prospectus" of the Society may be had on application at the office, where attendance is given daily, from ten to four o'clock.

ARTHUR MORGAN, Actuary.

SWEDISH GOVERNMENT LOAN OF 25,000,000 RIKSDOLLARS.

Whereas the Commissioners of the National Debt Office, in pursuance of a resolution passed by the Estates of the Realm now assembled, with the approval and sanction of His Majesty the King, and for the purpose of continuing the lines of Railway in course of construction by the State, are about to contract a funded, redeemable Loan, for an amount corresponding to the sum of Twenty-five millions Riksdollars Riksmynt, with addition of the expenses incident to the transaction, against an Issue of Swedish State Bonds in any foreign currency and language; and, whereas the Commissioners aforesaid have consequently had intrusted to them the duty of negotiating this Loan (in which the Bank of Sweden will participate in a sum equal to four millions of Riksdollars Riksmynt), in such manner and on such conditions as may be found most appropriate and advantageous for the Swedish State as borrower,—the said Commissioners have deemed it proper hereby to give information to that effect, and to make publicly known that tenders, containing positive offers for contracting the Loan in question, will be received by them without delay.

National Debt Office, Stockholm, March 13, 1860.

DUDLEY LOCAL BOARD OF HEALTH.

£10,000 WANTED.

The above Board want to borrow the sum of £10,000, either in one sum, or in sums not less than £2,500 each, on the credit and security of the General District Rates, authorised to be made and collected in respect of property within the District of the said Board, pursuant to powers contained in "The Local Government Act, 1858," to be repaid, with interest, by thirty annual instalments.

Sealed Tenders, addressed "To the Chairman of the Finance Committee, Local Board of Health office, Wolverhampton street, Dudley," stating amount proposed to be lent, the earliest date at which the same can be advanced, the lowest rate of interest, and for what term of years, to be delivered, free of expense, at the office of the Board, not later than 5 o'clock in the evening of Monday the 2nd day of April next.

The Board do not pledge themselves to accept the lowest, or any other Tender.

All further particulars may be obtained on application to me.—By order of the Board,

W. H. BROOKE, Clerk to the said Board.

Local Board of Health Office, Wolverhampton street, Dudley, 20th March, 1860.

ST KILDA AND BRIGHTON (VICTORIA, AUSTRALIA), RAILWAY DEBENTURES,

issued under the authority of an Act of the Legislature of Victoria, Number XLII. of the year 1857, whereby this Company was empowered to borrow to the extent of one-half of the paid-up capital, and for securing the repayment of the money so to be borrowed the Company was authorised to mortgage the undertaking with the future calls on the shareholders.

The undersigned, as brokers in this country for the negotiation of the above Debentures, hereby give notice that they will be ready to receive Tenders for any portion of Twenty-six Thousand Pounds (£26,000), in Debentures of £100 each, bearing interest at the rate of Seven per cent. per annum, on Wednesday, the 28th of March next, at 2 o'clock precisely, up to which time sealed tenders will be received addressed to them, and endorsed "Tenders for St Kilda and Brighton Railway Debentures." In cases of equality of tenders, they will be subject to pro rata diminution.

Each tender must be accompanied with a deposit of five per cent. on the amount tendered for.

The Debentures so contracted for will be deliverable to the subscribers on Wednesday, the 11th of April next, upon payment of the balance due thereon.

The capital of the Company is £135,000, divided into 5,400 shares of £25 each, of which £93,103 was paid-up on the 31st of October last.

Purchasers of the Debentures will be entitled to the interest accrued from the 1st of January last.

Principal and interest payable at the Bank of New South Wales in London. Principal payable on the 1st of July, 1869, and interest on the 1st of January and 1st of July in each year, by coupons.

MULLENS, MARSHALL, and DANIELL.

No. 3 Lombard street, March 19, 1860.

PERUVIAN FOUR-AND-A-HALF PER CENT. DEBT, 1853.

Notice is hereby given, that the following sums, viz., £104,000, the amount of the Redemption Fund for the six months ending the 1st day of March, 1860, and £23,081, the amount of accumulated interest of previous redemptions, have been employed in the redemption of

On the First of April, Price One Shilling, the 5th Number of

"ONE OF THEM."

By CHARLES LEVER. With Illustrations by "Phiz."

On Tuesday, in post 8vo, 8s 6d, the Sixth Edition.

FESTUS; A POEM.

By PHILIP JAMES BAILEY.

On Tuesday, in post 8vo,

THE GARDEN THAT PAID THE RENT.

Chapman and Hall, 193 Piccadilly.

LORD MACAULAY.

Just published, in foolscap 8vo, cloth, price 6s,

BIOGRAPHIES*

Contributed to the "Encyclopædia Britannica" By LORD MACAULAY,

With a Sketch of his Parliamentary Connection with Edinburgh, and Extracts from his Letters and Speeches.

* ATTERBURY—BUNYAN—GOLDSMITH—JOHNSON—WM. PITT.

Edinburgh: A. and C. Black. London: Longman and Co.

LORD MACAULAY.

Preparing for publication, in 2 Vols., 8vo, with a Portrait from a Photograph by Claudet,

THE MISCELLANEOUS WRITINGS

of the RIGHT HON. LORD MACAULAY: Comprising his Contributions to KNIGHT'S QUARTERLY MAGAZINE in the Years 1823 and 1824; Articles published in the EDINBURGH REVIEW not included in his Critical and Historical Essays contributed to the EDINBURGH REVIEW; also the Biographies of Atterbury, Bunyan, Goldsmith, Johnson, and Pitt, written for the ENCYCLOPÆDIA BRITANNICA. To the above pieces will be added some Epitaphs and a Monumental Inscription composed by Lord Macaulay. The Poetry contributed to periodical publications, and other poetry by Lord Macaulay which has not hitherto been printed, will likewise form part of this collection.

London: Longman, Green, Longman, and Roberts.

On 4th April will be published,

THE MILL ON THE FLOSS.

By GEORGE ELIOT,

Author of "Scenes of Clerical Life," and "Adam Bede."

In Three Volumes, post octavo.

William Blackwood and Sons, Edinburgh and London

DR RAMADGE ON ASTHMA AND DISEASES OF THE HEART.

I vol 8vo, greatly improved, second edition, price 10s 6d,

ASTHMA; ITS VARIETIES

and Complications, with Practical Remarks on their Specific Treatment. Illustrated by cases, and plates coloured from nature. To which is annexed a succinct Treatise on the Principal Diseases of the Heart.

By F. H. RAMADGE, M.D.,

Fellow of the College of Physicians, late Senior Physician to the Royal Infirmary for Asthma, Consumption, and other Diseases of the Lungs, &c.

London: Longman and Co.

FRASER'S MAGAZINE FOR APRIL

will contain the First Part of a new work, entitled "GRYLL GRANGE," by the Author of "Headlong Hall."

London: John W. Parker and Son, West Strand, W.C.

MACMILLAN'S MAGAZINE.

Edited by DAVID MASSON.

No. VI. (for APRIL, 1860) will be ready on Wednesday, March 28th. Price One Shilling.

CONTENTS.

I. The Revision of The Prayer Book. By the Rev. F. D. Maurice.
II. Requiescat in Pace. By R. Monckton Milnes, M.P.
III. Some Recollections of an Old Street.
IV. Buddha and Buddhism. By E. Vansittart Neale.
V. A Hedge-side Poet. By the Author of "John Halifax."
VI. Tom Brown at Oxford, Chapters 14, 15, 16. By the Author of "Tom Brown's School Days."
VII. The Sleep of the Hyacinth: An Egyptian Poem. By the late Dr George Wilson.
VIII. The Decay and Preservation of Stone. By Prof. Ansted, F.R.S.
IX. An English Painter's Tomb. By C. A. Collins.
X. Britain's Duty to Italy. By Thomas Hughes.

*** Volume I. will be published on April 2, handsomely bound in cloth, price 7s 6d. 13 as 12.

Macmillan and Co., London and Cambridge. Sold by all booksellers, newsmen, and at the Railway stations.

M'CULLOCH'S GEOGRAPHICAL DICTIONARY; In Two thick Volumes, 8vo, with Maps, price 63s, cloth; or price 73s, strongly half-bound in russia,

A DICTIONARY, GEOGRAPHICAL,

STATISTICAL, and HISTORICAL, of the various Countries, Places, and principal Natural Objects in the World: Illustrated with 6 large Maps.

By J. R. M'CULLOCH, Esq.

Second Edition, revised.

London: Longman, Green, Longman, and Roberts.

Lately published, in 2 vols., 8vo, price £2 12s 6d,

HISTORY OF PRICES,

and of the State of the Circulation from 1848 to the Year 1857. By THOMAS TOOKE, F.R.S., and WILLIAM NEWMARCH. Forming the Fifth and Sixth Volumes of "Tooke's History of Prices from 1792"; and comprising a full Index to the whole of the Six Volumes.

London: Longman, Green, and Co., Paternoster row.

FOURTH EDITION OF PEREIRA'S "ELEMENTS OF MATERIA MEDICA," REVISED BY DR. A. S. TAYLOR AND DR. G. O. REES.

New Edition, in 2 vols., 8vo, with a Plate and very numerous Woodcuts, price £3 15s, cloth; or separately, Vol. I. 28s; Vol. II. Part I. 21s; Part II. 26s, cloth,

PEREIRA'S ELEMENTS OF MATERIA MEDICA AND THERAPEUTICS.

Fourth Edition, greatly improved, including Notices of most of the Medicinal Substances in use in the Civilised World, and forming an Encyclopædia of Materia Medica: Revised and enlarged principally from the Author's materials by ALFRED S. TAYLOR, M.D., &c., and G. OWEN REES, M.D., &c.

The fourth edition of Dr Pereira's "Elements of Materia Medica" has not only undergone revision, but there has been a re-arrangement of the subjects, so that they are now placed more in accordance with the original plan of the author. The second part of the second volume is increased by nearly one hundred pages of new matter. There are twenty new articles, and fifteen additional Illustrations. The improvements made by Dr Carson, in the American edition, have been adopted by the Editors, and the Pharmacopœias of Norway and the United States have been laid under contribution for numerous medicinal preparations. To give some idea of the extent of the "Elements of Materia Medica," it may be mentioned that the fourth edition comprises upwards of two thousand six hundred pages, five hundred and eighty-six articles of Materia Medica, and four hundred and seventy-eight wood engravings. Each of the three divisions of the work is furnished with a copious separate Index.

London: Longman, Green, Longman and Roberts.

A New and Final Edition of

THE PENNY CYCLOPÆDIA,

with a NEW SUPPLEMENTARY VOLUME, illustrated by more than SIX THOUSAND ORIGINAL ENGRAVINGS. Thirty Volumes bound in Seventeen. Price FIVE GUINEAS.

The CYCLOPÆDIA and the ORIGINAL SUPPLEMENT being out of print, the Proprietors have printed a limited edition from the stereotype plates of the Twenty-nine Volumes. The paper and print are, for the first time, of uniform excellence. The Second Supplement is entirely new, and embraces every addition to the sum of human knowledge during the last twelve years. The sum of £40,000 has been expended on authorship and engravings alone.

James Sangster and Co., 36 Paternoster row, London, E.C.

A few odd volumes to perfect old sets.

The Political Economist.

MR WILSON'S BUDGET.

Mr Wilson's Budget has been exceedingly well received at Calcutta. Among the trading community it may be even said to be received with enthusiasm. This may appear singular good fortune for a scheme which imposes large additional taxation. But the peculiar circumstances must be considered. The mercantile community at Calcutta have been living for a long time in a state of financial uncertainty. Innumbered rumours of impending taxes have been current. Some taxes have been publicly proposed only to be indefinitely suspended. After this it is not to be wondered at that the trading public should receive very gladly a comprehensive scheme which is explained with clearness. And even without reference to personal qualities, it is not surprising that Mr Wilson should be more pleasing to the mercantile community in India than all previous financiers. He brings with him habits of publicity from England; he has been used to discuss the financial arrangements of this country with men engaged in business; he has much greater mercantile sympathies than it was possible for men with a purely official training to acquire. Moreover, the trading public at Calcutta feel that *this* scheme will be carried—that it will not resemble the abortive plans previously proposed. Accordingly, they say that now they know what to be about, that now they can lay plans for the future, that now the worst is past.

Mr Wilson found that the deficit in the Indian Exchequer was greater than he anticipated, and it is most satisfactory to find that there is on this point no difference of opinion between him and the other members of the Indian Government, although the latter had authorised the publication of accounts which were more pleasing than the truth. In September last a statement was issued by the Government estimating the deficit for the year ending 30th April, 1860, at 6,490,981*l*. But Mr Wilson, speaking "at the special desire of those who were then members of the Indian Government," states that this statement contained the following errors and undercharges:—

	£
Error in estimating military expenditure at Bombay.....	600,000
Underestimate of commissariat at Madras	300,000
Omission of the railway account.....	833,300
Underestimate of home charges	640,000
	2,373,300

Besides this, the public works will cost more than was estimated in September, and credit was then taken for 775,000*l* for new taxes which never came into practical operation and have not been paid.

The real deficit of the Indian Exchequer Mr Wilson finds to be 9,290,129*l*,—a sum curiously corresponding with that which Mr Gladstone dealt with this year. But it should be remarked that the position of the Finance Minister for India is much more serious than that of the Finance Minister for England. Much of Mr Gladstone's deficit arose from the legal cessation of well-known taxes which every one knew would be reimposed. As to the remainder of that deficit, there was no doubt that England could and would pay what was necessary. Mr Gladstone had only to say *which* taxes should be selected. Mr Wilson's position is different. No one knows for certain what taxes can be imposed in India, or what are needful. There is no experience on the subject. The established creed at Calcutta before the mutiny was, that no new taxes could be imposed. Mr Gladstone's difficulty was a choice of taxes,—Mr Wilson's, is a want of them.

The deficit we have mentioned arises as follows. The following is the balance sheet of India, *not* including the home charges:—

An Account of the Estimated Gross Public Income and Expenditure of India in the Year ending the 30th April, 1860.

INCOME.		£ at 2s the rupee.
Revenue from land, &c		21,000,598
Customs, exclusive of duty on salt		2,680,703
Salt { Sales and excise.....	£3,032,049	
Salt { Duty on salt imported into Calcutta.....	750,000	
		3,782,049
Opium		6,066,122
Miscellaneous.....		4,176,737
		37,706,209
Receipts from railway companies on account of traffic in India		330,700
		38,036,909
Excess of expenditure over income in India		3,783,109
		41,820,018

EXPENDITURE.		£
Cost of collection of revenue		7,317,845
Charges on Revenue.		
Interest of debt in India		3,035,667
Military charges in India, including extra levies, and local corps and repairs and construction of buildings	£18,460,240	
Stores from England charged in the Indian account	1,004,920	
		19,465,160
Marine charges in India, including public works charges	816,645	
Stores from England charged in the Indian accounts	103,660	
		920,305
Civil charges in India.....	8,898,890	
Stationery, Mint, and other stores from England charged in the Indian account	292,170	
		9,191,060
Miscellaneous charges in India		1,839,981
		41,770,018
Interest to be paid in India on railway capital guaranteed.....		50,000
		41,820,018
This shows the local deficit in India to be		3,783,109
The home charges are		5,507,020
		9,290,129

This is the actual charge for the present year (ending the 30th April), which can now be known with some accuracy. As to future years, after the experience we have had of Indian accounts, we cannot feel very confident. Mr Wilson

owever hopes, though he does not venture to do more than ope, that in the year ending 30th April, 1861, the balance sheet of the Indian Exchequer will be improved. There will be, it is hoped,—

	£
A reduction on the military expenditure of	1,240,000
No charge for compensation for losses sustained during the mutiny	1,000,000
And an yield from a tax on salt, imposed before Mr Wilson's arrival, of	410,000
	2,650,000

If we deduct this from the above sum of 9,290,129*l*, we shall have a deficit for the year of 6,640,129*l*. And even these deductions are hypothetical, while the deficit is a reality.

This deficit can only be met by augmentation of income and reductions of expenditure. We will speak first of the former. There has been a great deal of discussion at Calcutta as to the respective advantages of a license duty, an income tax, or a tax on tobacco. Mr Wilson has put on all three. He justly felt that the present was an occasion on which all the available resources of our modern empire should be exerted to the utmost,—that it was no time for keeping a financial reserve; but, on the contrary, that this was just the time for which a reserve was intended. He has the advantage of a clear stage. A License Bill was, it is true, brought in by the Government before his arrival, but it was changed in the Council into an income tax, and then never passed.

The license duty is to be of very moderate amount, and is to be levied as follows:—"One rate of one rupee a year on "artisans, including weavers, leather-workers, and similar "trades, but excluding the agricultural menial classes in "village communities, who are attached to them and are gene- "rally paid in grain:—four rupees a year on retail shop- "keepers and small manufacturers, who work for local "retail sale:—and ten rupees on wholesale traders, bankers, "manufacturers, and professions. These rates of one, four, "and ten rupees will be uniform, and apply to all of each "class without any discrimination as to incomes or extent "of business."

Of his second great instrument of direct taxation, Mr Wilson speaks as follows:—"Then, with regard to the "income tax measure, we propose that it shall apply to all "incomes above 200 rupees a year. Sir, the wider you can "spread the incidence of your taxation, so long as a fair "proportion is maintained as to the means of different per- "sons, the more just it is as a whole. The security of the "Government extends to all classes:—all classes from the "richest capitalist to the humblest labourer, as I have "already shown you to-day, have shared, and must share, "in the prosperity which good order and security can alone "insure. But, Sir, we propose that incomes from 200 to "500 rupees shall be taxed at a somewhat lower rate. "This we do, because if, at the same rate, the double action "of the license duty and of the income tax upon this class of "incomes would be rather more severe than in other cases. "We put incomes from 200 to 500 rupees at two per cent. "Sir, while we are mindful of the wants of the Central "Government, we are not forgetful of the many pressing "demands throughout India for local improvements. There "is nothing that strikes a stranger so much as the great ad- "vantage which a little outlay would be in improving locali- "ties, and to this the trading facilities in Calcutta form no "exception. On incomes above 500 rupees, we propose a "tax at the rate of 3 per cent. for the public treasury, and "of 1 per cent. to be appropriated strictly to local purposes; "and in regard to the appropriation of which, where muni- "cipalities exist, they will have a voice: the charge will be "very small, and the good to be derived from such a con- "tribution may be very great."

The smallness of the incomes to which the tax is to extend has surprised some persons in this country. But it must be remembered that the true limit of the area of direct taxes is the expense of collecting them. We should descend as low in the social scale as it will pay us to descend. All classes who can contribute to the expense of the Government should, as far as it is possible, be compelled to contribute in proportion to their means. What that limit is must vary in different countries. The present revenue of India is very expensively collected. The cost of collecting 41,000,000*l* is above 7,000,000*l*. It is probable that an income tax which descends very much lower in the social scale than any which we are used to, may be collected at a cost not much exceeding this. And it is to be remembered that India is not a country of middle classes. There are a few very rich, and many by no means rich people. We must go low in the scale of income if we wish our tax to be profitable. As to the mode of collection, Mr Wilson proposes to proceed tentatively. The Act contains the usual clauses which we have in England. But it is proposed to allow "the Government to approve "of any other method of assessment which may be proposed "by the Commissioners of any district as more in accordance "with the habits and wishes of the communities, provided "always they are satisfied that the result will be fair. By "this means we hope to shape the practical working of the "tax through the aid of the Punchayets, and by using largely "the instrumentality of the heads of towns and trades under "the supervision of our own officers, so as to make it of com- "paratively easy operation."

It is likewise proposed that there should be an Excise duty on home-grown tobacco, as nearly as possible coinciding with the corresponding import duty.* There are obvious difficulties in the way of levying this, which Mr Wilson fully acknowledges; but he believes that they can be overcome, and that in the present state of India they ought to be overcome.

These are all the taxes which it is proposed to levy in the interior of India; but there are some changes in the Customs tariff which are of considerable importance. As might be expected, Mr Wilson has not forgotten the great lessons of the experience of Sir Robert Peel. He is anxious to stimulate the trade of India; it is his business to make her pay taxes, and he knows that the richer she is the easier she will pay them. He accordingly proposes to reduce the *ad valorem* duty of 20 per cent. now levied on imports to 10 per cent., which he estimates may be done without great loss to the revenue, as the imports have declined in amount under the very high duty, and will probably therefore thrive more under a lower one. He likewise proposes to exempt from transit and export duty many of the great staples of Indian industry: the duties on these, though not very productive to the Government, are harassing to the trader. The list of reductions is as follows:—

	£
1. Loss on 20 per cent. duties	30,000
2. Wool, free	17,000
3. Hides and hemp, free	16,000
4. Jute, free	15,000
5. Flax, free	...
6. Tea, free	2,500
7. Prints, maps, &c., free	1,500
Total	82,000

On the other hand, it is intended to impose an export duty of 5*l* 10s per ton on saltpetre, an article which India has peculiar facilities in producing, and which, therefore, is better fitted for an export duty than any other; and also an increased duty on the import of cotton twist. As the latter measure has been objected to in this country as a measure of protection, it is proper Mr Wilson's explanation of the circumstances should be comprehended:—"I now," he says, have "to mention the last change which we propose in the tariff, "and it is the only one which I make with regret. But "necessity has no law. I must own that, after due consi- "deration, we can discover no good reason why cotton yarn "and twist should be imported at a lower rate of duty than "cotton piece goods. I know it is said that it is in an "earlier stage of manufacture; but may the same not be "said of grey cloth, as compared with bleached and dyed "cloth and printed cloth? If we are to have an average "duty, it should be an average throughout; nor do I attach "much importance to the argument that a low duty on yarn "and a higher duty on cloth encourages native weaving. I "could find those who complain that their labour in spinning "fine yarn by hand is interfered with by a lower duty on "yarn. But I attach little importance to that class of argu- "ments, and I believe that the same duty of 10 per cent. "may be placed on yarns as is charged on goods without "any perceptible injury to the trade. The trade in both "articles appears to be progressing rapidly." So far, there- fore, from the proposed alteration in the tariff having a protective, it has the reverse tendency. To tax the early stage of manufacture more than the later is to give a protection to

* The import duty on unmanufactured tobacco is in future to be 8 annas the seer, and on manufactured tobacco, 1 rupee the seer.

those who are engaged in the later stages: to put both the earlier and the later stages on an equal footing is to abolish that protection.

Such are the taxes which Mr Wilson is about to impose in India. He wisely gives no estimate of the yield of each, or even of them altogether. There are no data for doing so. An English Chancellor of the Exchequer selecting from well-known taxes those which will he thinks best serve his purpose, is in a position to anticipate with reasonable certainty the degree of their productiveness. An Indian Chancellor of the Exchequer, who must devise new taxes of which he has no experience, can make no estimate, for he has no materials.

With respect to the other side of the account, the possible reductions of expense, Mr Wilson is not prepared to propose any reduction in the civil expenditure. He has imposed, as we have seen, a heavy income tax on the civil servants; but he does not also propose to diminish their pay. He evidently does not consider the civil servants in India overpaid. They have to perform the most difficult duties, often under the most trying circumstances, at the greatest distance from their friends and their home,—and it is necessary that such men so placed should be well paid.

The military expenditure is in a different position. That has been largely increased of late years, and it is reasonable to think it may be much reduced. The figures are these:—

	£
1856-57	13,213,454
1857-58	17,215,674
1858-59	24,717,638
1859-60	21,732,611

Now it is evident that the latter figures represent, not the cost of governing India, but the cost of *subduing* the mutineers of India. We have for the last few years been engaged in a task as costly as it was painful. The army we had relied upon to sustain our power tried to overthrow our power. We had to resist them as we could, and with any force that could be got together. It was not in the nature of things that such a struggle should be managed economically. It was a question not of money, but of existence. As that struggle is now at an end, we may reasonably hope that our expenses may be less. The expense of continued quiet must be less than the cost of conquering rebellion.

Mr Wilson spoke in just terms of the advantages we now derive from the disappearance of the old Sepoy army. It had long been considered by the best judges as our real danger, and we have found by the worst experience that it was so. "Lastly, Sir," Mr Wilson observed, "the Sepoy "army—which so long has been our real danger in India, "which so long has been, if not a standing menace, at least "a standing source of apprehension to our farest-seeing "statesmen—has at last dissolved itself: an army petted "and spoiled by indulgences inconsistent with discipline—a "close body, self-recruited by the men themselves with "brothers and cousins, and relatives, of which many under-"stood the danger, but which none had the boldness to "incur the risk of dealing with: that army has disappeared "and is blotted out. Sir, this Frankenstein, which at one "time was only alluded to, in bated breath and in a whisper, "when it was discussed as a source of insecurity, has "committed suicide, and can be spoken of openly, and all "its errors exposed. I hope the example it has set, the "experience it has given us, will never be forgotten."

These words have, it is true, undergone some criticism. It has been said that an immense number of natives are still employed by us as soldiers; that the Madras and Bombay armies never rebelled, and still exist. But in spirit Mr Wilson's words are correct. The old *system* is abolished. We had staked our security, our empire, the lives of our Anglo-Indian fellow-subjects, on the faithfulness of a Sepoy army. We had in comparison no force of our own—we trusted to them mainly, if not exclusively. We now trust to ourselves mainly, though not exclusively. We employ many natives as soldiers, but we use them as auxiliaries, and auxiliaries only. The old Sepoy system, as Mr Wilson remarks, is gone never to return. No one will ever propose its revival.

What arrangements are to be made for the future we do not know, and Mr Wilson does not tell us. A commission is now sitting at Calcutta on the subject. And it cannot he doubted that they will have many improvements to suggest. The existing military system of India was created on a sudden, in the crisis of a rebellion. It seems almost certain that attentive inquiry in time of peace must suggest many improvements that will increase its efficiency and diminish its cost.

Such is the scheme which Mr Wilson has proposed for remedying the financial difficulties of India; and, though the Economist cannot but be suspected of partiality on the subject, we think that we run no risk in saying that in all its main provisions it will be as acceptable to the public of England as we know it has been to that of Calcutta.

THE AWAKENING OF EUROPE.

It is by no means impossible that the annexation of Nice and Savoy to the French Empire, if we duly lay to heart all the lessons which it teaches, may indirectly prove a source of safety rather than of peril both to Europe and ourselves; and there are not wanting some very reassuring indications that these lessons are being interpreted and understood. In the first place, we shall surely have learned not to rely for the future upon the promises and asseverations of the Emperor of the French. And, by the way, the same remark will apply to the King of Sardinia,—whose declarations that he had "not the least intention to cede, sell, or exchange "any portion of his dominions," have been as recent, as reiterated, and as solemn as those of his Imperial customer that on his part nothing was further from his thoughts than participation in any such bargain or arrangement. In future, then, in dealing with both these Potentates, we shall, it is to be hoped, gather their designs rather from their deeds than from their words, and shall consider what they may be tempted to do, or seem preparing to do, rather than what they assure us they are about to do. We shall use our brains and not our tongues. We shall observe in place of interrogating. We shall think for ourselves instead of questioning our allies. When we see the Emperor augmenting his navy, stimulating the activity of his dockyards, filling his arsenals, calling in his furloughs, holding daily or nightly consultations with boatbuilders, armourers, machinists, and engineers, we shall draw our own conclusions and take our own measures, instead of wasting diplomatic breath and ink in asking him what he means, and parliamentary phraseology and character in professing ourselves "thoroughly satisfied" with his explanations and assurances. We need not announce our mistrust offensively. We need not assume hastily that our illustrious ally entertains any immediate or distinct hostile designs. But neither need we again commit the idle simplicity of asking a man whom we suspect of such designs whether he really entertains them, and attempting to extort from him either a confession which would defeat his plans, or a denial which we should not now think of believing.

In the second place, it is to be hoped that we shall profit by the warning we have received as to the consequences of strict *personal* intimacies—exclusive alliances with foreign Sovereigns. The Economist has never ceased to point out the mischiefs and the dangers of such intermixture of public and private relations. In the case of the Emperor of the French, this confusion of what ought to be kept most strictly separate has been singularly noxious;—it has done us much harm, led us into much danger, and brought upon us much discredit. It is not easy to doubt the familiar and convivial assurances, half jocularly given as if it was impossible you could be serious in asking them, of a boon companion or an intimate friend, with whom you hunt, smoke, play at billiards, and attend *bals masqués*. It is still less easy to tell such a man that you believe he is playing you false. In these hours of gaiety and unreserve, too, feelings are easily betrayed and secrets easily surprised; and they always, therefore, turn to the advantage of the party who is least sincere and least confiding;—and this party never is the Englishman. In such moments, again, promises are apt to be hastily given, and encouragements thoughtlessly held out, and admissions incautiously made,—all of which may entail future complications and embarrassments. Moreover—and this becomes a very serious consideration—in these intimate *personal* alliances, reputation is apt to suffer, and character itself is sometimes injured. In forming foreign *political* connections the moral qualities of the Sovereign are wholly irrelevant to the matter: it would be an impertinence even to inquire into them. The treaty, the agreement, the con-

joint action, is with *the Government*—with the nation, that is, as represented by the Ruler. It is an arrangement not between individuals, but between States, and its motives and nature are well understood through Europe. But the case is otherwise where personal intimacies come into play: *there* considerations of morality and fair fame must and ought to be regarded; and if such intimacies are contracted and persevered in, and fostered apparently by preference, with Sovereigns whose character and antecedents are, to say the least, far from unexceptionable, it is impossible that some discredit should not be the result. If foreign Governments see us cultivate with any particular Sovereign a degree of intimacy which is unusual and not necessitated by any ostensible political requirements, they naturally conclude that we find in the character or aims of that Sovereign something peculiarly in harmony with our own;—and it is impossible to say that their conclusion is illogical or unwarranted.

Again, we shall have received a timely and salutary reminder of the danger of isolation from the other Great Powers of Europe. For a long period, and owing to a variety of circumstances, the tendency of our policy has been to draw us closer and closer to France, and to alienate us from other States. We do not state this as a matter for reproach or blame. To a certain extent we could not avoid it—to a greater extent we ought not to have avoided it if we could. Sometimes the object and policy of France have really coincided with our own. Sometimes she was willing to further our aims. Sometimes she was able to persuade us that her avowed aims were her real ones—and were such as we could conscientiously wish success to. But it has so happened that while acting with her, we have incurred the hostility or the coldness both of Austria and Russia. One of the last results of this we have just seen, in the refusal of these two Powers to enter into any joint remonstrance against the annexation of Savoy. Russia says that she will not object because she holds that Sovereigns, by agreement among themselves, have a right to dispose of their subjects and their territories, and that the proceeding, therefore, is in full accordance with the sacred old principles of Legitimacy. Austria will not object because she sees no reason why Sardinia should not be despoiled of Savoy just as *she* has been despoiled of Lombardy. Prussia protests, but a protest by only *two* Powers out of five, is not likely to be much regarded. It has become pretty evident, therefore, that, the old career of French aggrandisement having been reopened, and it being impossible for England to second or to approve of that aggrandisement or of the spirit which it indicates,—the *intimate and special* alliance which has hitherto subsisted between the two immediate neighbours must be exchanged on our part for wider and more general political connections. The peace and safety of Europe render this change necessary; and two things were made most gratifyingly obvious by Lord John Russell's declaration on Monday last, and by the manner in which that declaration was received,—viz., that our Government has at length awakened to the warnings and the duties of the crisis, and that the country is delighted at the wakening. A very encouraging intimation of a corresponding change of sentiment on the Continent has reached us this week. The *Allgemeine Zeitung* is, as our readers are aware, in some measure *The Times* of Europe. It is the organ of no particular Cabinet, but receives information and suggestions from all, and is constantly employed to explain both the general feeling of Germany and the special policy or wishes of the Government of Vienna. Now, a few days since, that journal contained a remarkable paper, the result of great care and apparently emanating from a high quarter, observing that Prussia was evidently awakening to a sense of danger from the designs of France; that, under Count Schleinitz, she might be trusted to make common cause with the rest of Germany against any foreign aggression; that, though Austria could not but feel that Prussia had not shown her the ready aid she ought to have done in the Italian struggle, yet that this ought now to be forgotten;—and, ending with the sensible and statesmanlike remark, that England could not be expected to commit herself to an alliance with a *disunited* Germany, yet that as soon as a cordial union was effected between the several States composing that confederation, it was now certain that the friendship and aid of England would not be wanting.

All these matters should be well weighed by Englishmen, and by none more than by those who have large commercial interests at stake. The result which is to be expected lies now much in the hands of our Ministers,—still more, perhaps, in our own. If the people and the rulers of Great Britain are at length fully alive to the character and desires, and probable designs of the French Emperor, and will permit themselves to be lulled into security again by no anodyne which he may offer; if they will quietly exchange the exclusive and exceptional intimacy which they have hitherto cultivated with him alone, for a mere ordinary alliance with France and a cordial understanding with the other Powers of awakened Europe; if they will at once—or as speedily as possible—withdraw from all *joint action* with the French forces, like that which so unluckily hampers us in China; and if, without the expression of any anger or mistrust, they will simply proceed at home exactly as they would if they looked only to what he has *done* and is *doing*, and had never heard anything he ever *said;* if, in a word, they would use their eyes more and their ears less, and think for themselves instead of asking him what they are to think,—then our worst fears will be allayed and our worst dangers will be ended. By forbearance, by patience, by meeting his wishes, commercial and political, to the utmost verge of what is just and prudent, we have done all we could do to avoid a rupture and cement a most desirable but always somewhat precarious friendship. Of two things, we may now feel certain—and both are satisfactory reflections—*first*, that a rupture will not come if we and our allies so act and so unite as to make that rupture eminently hazardous to the assailant; and *secondly*, that if it should come at last, it will find a nation united and resolute as one man, because no one will be able to say that we have not done all that in honour and in justice we could to avert so deplorable an issue.

THE MONEY MARKET AND THE TRADE OF THE COUNTRY.

Every succeeding month seems to us to confirm the view which we took of the prospects of the money market at the commencement of the year. We then observed that the value of money had long been low, but that we might expect it soon to increase. We pointed out that, as far as the data on such a point warranted a conclusion, the uninvested savings of the country were not large. The accounts of the Bank of England showed no excess of unemployed money: on the contrary, it even at that time appeared from them that any new demand for money would probably be attended with an increase in its value.

Subsequent events have confirmed this anticipation. When we wrote the rate of discount was 2½; it is now 4½. Various circumstances have, it is true, co-operated in producing this effect. There was at one time a considerable demand for silver for export to India, in consequence of the transmission hither of rupee notes for sale. These notes, like everything else, had to be paid for, and they were paid for in bullion. This species of demand has, however, now died away. The prices at Calcutta and London of the rupee paper are no longer sufficiently different to afford any profit on the importation of these securities, and the demand for silver so caused has in consequence died away.

There has also been a species of continuous dispute between the bill-brokers and the Bank, which is not yet at an end, and which might certainly tend to make a momentary want of confidence in Lombard street greater and more lasting. We cannot think, however, it would for any long time have a serious influence on the value of money. The disputes of individuals cannot in the long run control the laws of supply and demand. They may affect trifling amounts for small spaces of time, but they could not alter by 2 per cent. the rate of discount on the millions of bills negotiated in London.

The real cause of the rise in the value of money is the augmentation of the trade of the country. We pointed out in the article to which we just now referred, that it was some time before this cause could produce an effect, but that eventually it was quite certain to do so. For a considerable time the steady accumulation of unemployed money during a period of depression prevents a rise even after trade has begun to augment. The supply augments so much that it is some time before the mercantile demand can overtake

it. Eventually, however, it is sure to do so. The regular increase of trade will certainly in the long run maintain money at a fair rate in this country, and we need only see that our trade is conducted on sound principles, and yields a steady and business-like return.

That the trade of the country is rapidly augmenting, the returns which we print in our Supplement this week show conclusively. The declared value of our exports of all articles for the corresponding periods of this year and 1858 and 1859, is as follows:—

FOR THE MONTH OF FEBRUARY.

	£
1858	7,288,416
1859	9,614,143
1860	10,721,940

FOR JANUARY AND FEBRUARY.

1858	14,510,016
1859	19,207,566
1860	20,088,437

We are as usual a month behind in our returns of the computed value of our principal imports, but the return of them for the month of January is as follows:—

	£
1858	4,267,017
1859	3,879,248
1860	5,155,718

There can, therefore, be no doubt that, so far as the mercantile position and circumstances of the country are concerned, our position is thriving and prosperous. 4½ per cent. is no extreme rate for money. A very few years ago we should have thought it a very low rate. During most of 1858 and 1859 money was perhaps dangerously low in value: it yielded so little that people might have been tempted to make a rash use of it. Our commerce has improved so much that this is the case no longer. There is every prospect that money will not again be for a long period so low as it was this time twelvemonth. Our commercial prospects are singularly good; let us hope that no political events or calamities may happen to defeat them.

The action of the Bank on the present occasion has been criticised; but we think it is fully justified by the figures of their account this week. The increase of their advances to the public has recently been very great. On the 7th of March—

	£
The other securities were	20,953,897
And they now are	23,955,189

being an increase of *three millions in three weeks*. It is true that the reserve of notes has not declined in the same proportion.

	£
On the 7th of March it was	9,025,838
It now is	8,766,346

But then the liabilities of the Bank are much greater now than they were then. On the 7th of March—

	£
The public deposits were only	8,341,365
The private deposits	12,836,611
	21,177,976

In this week's return—

	£
Public deposits are	10,384,110
Private deposits	13,556,194
	23,940,304

Though the absolute amount therefore of the reserve in the Banking Department is not very greatly altered, its *relative* amount in proportion to the liabilities against which it is held has much varied, and so material a change is a sufficient justification for the step the Bank have taken.

THE NEW BANKRUPTCY BILL.

To Bankruptcy, perhaps, more than to any other branch of the law, have the skill and energy of law reformers been devoted; it has been the pet subject with Lord Brougham, the most untiring of all men in the amendment of our jurisprudence; and from the nature of the subject as a border ground between law and commerce, it has not been left to the lawyers alone, but has received the attention of mercantile men also; and yet it is admitted that things,—bad enough in the days of Lord Eldon,—are worse now, and that it is high time to amend the amendments and to reform the reforms. Here is a fact worth thinking over, and one that, whilst it should not scare us from sober and well-considered changes in our jurisprudence, should make us careful that every change we adopt be a sober and well-considered one.

The views and wishes of commercial men in this country on the subject of the reform of these laws have been expressed with a more than usual definiteness: for not only has this subject formed during the last three or four years a frequent matter of discussion in the Chambers of Commerce and the meetings of their representatives, but the united sentiments of these associations were embodied in the Bill which has been more than once introduced into the House of Commons by Lord John Russell. The Attorney-General had thus before him a definite expression of the wishes of the classes most interested in the question, and he has shown his appreciation of its importance by adopting very many of the provisions of the previous Bill; and though we are far from thinking some of the differences which he has introduced to be improvements on his colleague's proposed measure, his Bill, if passed, will effect many and most wholesome reforms in bankruptcy and insolvency, and, as we hope, render that branch of our law more on a level with the needs of society.

We have repeatedly pointed out that, of all the evils of our present bankruptcy system, none is so fatal as its costliness. Were the system itself far more perfect than it is, where would be its use when an expense amounting to 33 per cent. repels and frightens those who would seek its benefit? No doubt the question of the costs of all judicial proceedings is one of some difficulty: it is not easy to keep them so low as to afford a reasonable chance of relief to all men, and yet to avoid the tendency towards the "cheap and nasty" which is even more abominable in courts of justice than elsewhere. But 33 per cent. is a deduction for which nothing can be said, especially when it is found, as Sir Richard Bethell tells us, that the same work of administration is done by the Court of Chancery at a cost of about 5*l* per cent. The Bill now before the House, whilst it will not do all for the relief of the suitor which has been hitherto asked, will yet do much that we shall gratefully accept. It will abolish those most enviable of mortal men on this sublunary earth—the messengers—who now make large incomes, sometimes we believe exceeding the salaries of the Commissioners, for doing no appreciable good whatsoever. The compensations still payable in consequence of former changes in the law, which are now borne by the present suitors to the Court, are to be thrown upon the Consolidated Fund, Sir Richard,—most persuasive of men,—having induced the Chancellor of the Exchequer to accept the burden of 47,700*l* in exoneration of the funds of the Bankruptcy Court. The Bill furthermore abolishes the per centage now payable to the Chief Registrar's account, substituting in the place of these payments a registration fee, varying in amount from 5*l* to 15*l*, according to the value of the estate administered. These are, no doubt, changes for the better; but we look in vain for what appears to us the only satisfactory and reasonable arrangement of the financial affairs of the Court,—namely, on the one hand, transferring to the credit of the national exchequer all sums at present in Court, except so far as they are necessary for the payment of dividends on estates now under administration; and, on the other hand, charging on the Consolidated Fund all compensations and salaries whatsoever. Something may, perhaps, be said, on the ground of the difference between administrative and judicial expenses, for charging the judges' salaries on the country and the registrars' on the suitors; but we are at a lost to understand why past compensations should be now, for the first time, transferred to the Consolidated Fund, and the compensations created by the present measure should be charged on the funds in the Court. What is just and fair as regards the old compensations, must be just and fair as regard the new ones.

We confess, too, that we are unable to see the necessity or propriety of establishing a new chief judge in bankruptcy with a salary of 5,000*l* a year, a rank amongst the puisne judges of the superior courts, and the needful appendage of a secretary at 300*l* a year. This judge will, according to the plan proposed, have original jurisdiction in respect of all London estates over 300*l*, and he will also hear appeals from the country commissioners. From his decisions there will be an appeal to the Lords Justices, and from them, in certain cases, to the House of Lords. But if the commissioners are fit to transact the business in the country, surely they may be fit to do the same in London. There is something anomalous and irrational in making the same man exercise an original

jurisdiction in cases originating in London and a large district of country extending from Norfolk to Wiltshire, and an appellate jurisdiction in the same class of business when it happens to arise in other parts of the provinces—in giving three appeals in the latter case, and only two appeals in the former. Whether the right of appeal be a boon or a burden, a blessing or a curse, surely it ought not to vary in the different districts,—to be twofold only in London or Southampton or Norwich, and threefold at Birmingham or Bristol or Leeds. We think the present Court of Appeal is well and ably constituted; and we should regret to see interposed between it and the decisions of the country commissioners a new court, exercising in part an original, and in part an appellate jurisdiction; and the more so as that appeal would be, not as now from the judgment of one man to the judgment of two, but from one single judge to another, a form of appeal which we consider always objectionable.

The abolition of the classification of certificates is fully justified by the statements on that subject which the Attorney-General made in his speech; for he showed that the proportion of first-class certificates granted by the several commissioners in the London district ranges from one in twenty-eight to one in four, a result which might well be anticipated, when we remember that these learned gentlemen have long ago expressed the most opposite opinions as to the principles which ought to govern the exercise of the wide and somewhat singular discretion which has been devolved on them. It is an evil that this classification should continue, if a first-class certificate be thought valueless, but a still greater evil if it be thought of any value.

The union of bankruptcy and insolvency by the merger of the latter in the former, the increased power of the creditors in the management of the estate, the subordination of the official assignee to the chosen representative of the creditors, and the jurisdiction to be given to the Court over trust deeds for the benefit of creditors, are all points in which the Bill now before the House promises to realise to no inconsiderable extent the expressed wishes of the select public who have during the last few years applied their attention to the evils of the law of debtor and creditor. We are very anxious to see expunged the clause avoiding all but certain specified deeds of arrangement: and there are many other changes which we hope to see introduced into the measure in committee; but even in its present form the Bill would work important benefits to the country. The Court of Bankruptcy will never be a very cheerful and sunny region; something of gloom will always hang round the place where the estates of ruined men are cut up and flung in morsels to the discontented creditors; but it may be made better than now it is; and in the work before him Sir Richard Bethell has this rare encouragement—that he must succeed. For, make what change he may, he cannot do harm: things cannot grow worse: they may grow better.

MR WILSON'S IMPRESSION OF THE PRODUCTIVENESS OF INDIA.

THE following is an extract from Mr Wilson's speech, delivered at Calcutta on the 18th ult.:—

Sir, I am fearful of wearying the Council with all these details, but I trust you will bear with me. We have a grave conjuncture of affairs to deal with. I think you will already begin to perceive that the evil is deeper and broader than at first it appeared. I think you will begin to see that our task will be heavier, and must extend to great questions of administrative reform, as well as to immediate questions of finance. You will, therefore, I am sure, pardon me if I feel it to be my duty, to the best of my ability, to unbare before you the whole extent of the evils as they present themselves to my mind. Sir, I sincerely trust that in the free observations which I feel compelled in the performance of my duty to make I shall be understood not to reflect unfavourably either upon any individual or upon any class. It is to the system, and the system alone, that I refer. Nay, I will say more. It has been a matter of surprise to me that, with so defective a system, greater evils have not arisen, and that they have not I attribute only to individual zeal and care. It is, Sir, with that system we shall have to deal, with a system under which, in thirty-three years out of forty-six we have suffered a deficiency in our finances at the rate of 5,500,000*l* a year, and amounting in the whole to 72,195,416*l*; under which we have now a deficit in the present year upwards of 9,000,000*l*, and a prospective deficit in the ne year of about 6,500,000*l*; under which our debt has increas in three years by upwards of 38,000,000*l*, and the annu charge upon it by about 2,000,000*l*. That is the price t mutiny has cost the people of India. It cannot be repeat too often. But, Sir, bad as our case may be, and eve worse than we expected, is there any ground for despair Sir, in my opinion, if we are only prepared to do our duty our country and our Sovereign, I say there is none. On th contrary, gloomy as may be the picture I have drawn, an not more gloomy than justice demands, I will freely expre my own most confident opinion that, if we are only true t ourselves, and I will add to the weighty obligations we hav undertaken towards India, not only are all these evils capabl of solution, but I will say further, that we may, with th blessing of a higher Power, aid in creating a future of bri liant prosperity. Sir, at this moment everything favour our noble enterprise, if we will undertake it. Nay, the ver crisis through which we have recently passed at such a sacri fice greatly favours us. While yet I was in England, upo more than one occasion I expressed my unbounded confidenc in the resources of India. I did so from having watched th progress of its trade, and having studied the character of th country at a distance; but, Sir, if I had confidence in the re sources of India while yet I had not seen it, I must say tha it has been greatly increased by what I have had the privileg of witnessing since my arrival.

It may appear almost presumptuous in one who has bee in the country little more than two months to allude to hi experience or to opinions based upon personal observatio But, Sir, I have had advantages during that short interva which do not often fall to the lot of men who pass even man years in the country. As you are aware, a fortunat accident led to my visiting the Upper Provinces imme diately after my arrival. I have travelled from Calcutt to Lahore, and from Lahore back to Calcutta. I hav visited every town and city of importance over that ex tensive tract. I have had the advantage, and a rare on I must acknowledge it to have been, of freely discussin all matters of public interest with the civil servants of th Crown at every station. At every important town I hav had free intercourse in public and in private with the nativ merchants and bankers, and of these I will say, that i enterprise, in knowledge, and sagacity, they would wel compare with some of the most enlightened classes in Europe The impression produced upon my mind with regard to th resources of the country and the capacity of the people t develop them was most favourable. A richer soil, a fine climate, a more industrious, active, and frugal, and I will ad docile population, it would be difficult to find anywhere. Sir it would be difficult to imagine anything more intensely inte resting. I have seen many European countries, but I hav seen none at once so striking, so wonderful, so interesting The nearest comparison I could make would be Belgium upo an immensely enlarged scale. You have the same ancient, mag nificent cities, with their narrow streets, their thronged popu lation, their splendid public buildings, the relics of decayed dynasties, and the active bustle of trade at every corner; but what is more important and more to our present purpose, you have the same expansive plains, with huge mountains in the far distance, large rivers, and magnificent canals irrigating the countries,—the same careful husbandry with cultivation up to the roadside, and the same teeming population, all bent on active and profitable pursuits,—you have the same thrifty and economical habits.

Sir, I am told that all these symptoms have increased since the mutiny. Considering what we had before been told of India, I must say that the impression produced on my mind, both from what I saw and what I heard in conversation, was as if the people of all classes had been roused into a new activity by the great crisis which had shaken the whole country. On all hands I was told by European officers that the change since the mutiny was so great that people seemed as if they had been awakened from a state of lethargy to a state of intense activity; that the whole character and tone of the people was so much altered for the better, since the signal proofs they had received first of our power, and next of our justice, moderation, and magnanity, that those who had been absent but for a short time could hardly be fair judges

of the present state of India. Such was the change, I must think, to my mind. I never saw greater signs of industrial vitality, all full of promise for the future prosperity of India. When I had the good fortune, as Secretary to the India Board, in 1849, to pass the two first Bills through Parliament for railways in India, I was told, and that by those who had had long experience in India, that the natives would not use them. We have only on this side of India two extensive pieces of line open, from here to Raneegunge, and from Allahabad to Cawnpore. Those who have seen the rush of third-class passengers on a holiday in Belgium can from that form the best idea of the use made of these lines of railways. What we require is, the completion of those lines at any cost, but quickly, and we shall see a result for which the most sanguine is not prepared.

But, Sir, there is another element of secure prosperity which India especially enjoys. Almost everything she produces is in constant and boundless demand in Europe, and almost every article of importance required in Europe is to be found increasing in India, so varied are her products. Sir, in this fact there is great security for the future. Let cultivation be extended and improved ever so much, there is no fear of the want of a market. But let me appeal from mere opinions to facts, to show the condition in which India is now placed. Sir, it is undoubted that, at the present time, India enjoys a prosperity far beyond comparison with any former times; and what is most satisfactory is, that the evidences of that prosperity have been for some years past steady and accumulative. It is not, Sir, a mere transitory excitement. As proofs of this, Sir, let me refer to our exports and imports. I hold in my hands official returns, which exhibit the amount of our exports and imports in each year since 1834. Sir, I now speak of merchandise only, leaving out of question for the present our large transactions in treasure. Well, Sir, in 1834-5 the total amount of our exports to all parts was only 7,993,420*l*; in 1858-59 it was no less than 26,986,000*l*; and in the present year it will be considerably more. Again, Sir, in 1834-35 the value of our imports into India was only 4,261,106*l*; in 1858-59 it was no less than 21,366,447*l*; and in the present year will exceed 24,000,000*l*; and this is independent of treasure, to the average amount in the last five years of no less than 11,223,107*l* yearly. Sir, I have had these returns divided into periods of five years, showing the average of each period, for convenience. This division gives the following results :—

		Imports. Merchandise. £		Treasure. £
1834 to 1839	average	4,970,000	.....	2,345,000
1839 — 1844	—	7,691,428	.....	2,762,164
1844 — 1849	—	9,131,612	.....	3,073,249
1849 — 1854	—	10,756,134	.....	4,474,107
1854 — 1859	—	15,365,934	.....	11,223,107

		Exports. Merchandise. £		Treasure. £
1834 to 1839	average	11,071,520	.....	251,069
1839 — 1844	—	13,789,769	.....	462,795
1844 — 1849	—	15,675,044	.....	1,320,503
1849 — 1854	—	14,899,594	.....	646,469
1854 — 1859	—	22,187,736	.....	800,605

Taking the exports and imports of merchandise and treasure—and there is really no distinction between the two—we find that the trade of India has grown up during the period embraced in these tables from a total sum (exports and imports together) of 13,847,289*l* in 1833-34, to one of 60,219,660*l* in 1858-59. Can we desire a stronger proof of the steady prosperity of the country? So much for our external trade; but I have proofs no less conclusive of the improvement of our internal condition, to which I would claim the attention of the Council, and especially as they touch the interests of a body of gentlemen to whom I shall have hereafter to refer. It is notorious how much the price of all country produce has increased of late years, in consequence of this great demand for exportation. Now, Sir, what has been the effect produced upon the interests of the cultivators of the soil by this enlarged trade? I hold in my hand a return showing the number of estates in the permanent settled districts brought to sale in each year since 1834-35 to the present time, for default of rent. In the first year of the period, estates representing an annual rental of 481,400 rupees, or 48,140*l*, were sold for rent; in the next year, 1835-36, the sales represented an annual rent of 950,608 rupees, or 95,060*l*, and this average of seven years old at that time represented a rental of 56,751*l*. What is the case now? In the last year, 1858-59, the sales represented a rental of only 14,493 rupees, or 1,449*l*, while the average of the last seven years shows a rental of only 65,326 rupees, or 6,532*l*, being little more than a ninth of the former average. Again, if I refer to the arrears of land revenue at the end of each year, I find that from a sum of upwards of four crores (4,000,000*l*) in 1834, they have now dwindled down to a mere nominal sum.

Sir, I am not forgetful of the share which an improved administration may have had in producing these results; but undoubtedly they are also in great degree, if not mainly, to be referred to the increased demand for the produce of the land occasioned by our extending commerce, and the unusual prosperity which has resulted therefrom. But, Sir, another result has flowed from these causes, more important and more interesting than any, because it affects directly the great masses of people individually so helpless. Sir, I am thankful to know that the benefits thus conferred by our commerce upon the land have extended, and in no slight degree, to the labourer. It is no exaggeration to say that such has been the increased demand for providing labour, that the rate of wages has risen in many districts twofold, and in some threefold, during the last few years. In the face of evidence of this kind, can any one doubt that all classes in India are in a state of prosperity unparalleled at any former time? It is indeed, Sir, I believe, a fact which is undisputed. Well, Sir, let us pause for a moment and consider what it is I have shown you. I have shown from statements and facts only too well known to every one, and beyond dispute, that the finances of the State are in a condition of unparalleled disorder and deficit; and I have shown, by proofs equally conclusive, that under the protection of that Government, by the peace and good order which it maintains, by the commerce and enterprise which it succours, every class of the community is in a condition of unparalleled prosperity. Could there be a greater contrast than that which it has been my duty to draw to-day, between the condition of the Government, all powerful in its executive character, and that of the people? But, Sir, there is such a sympathy between the credit of a Government, the finances of the State, and the commerce and trade of a country, that it would be contrary to all history that such an anomaly should continue. Depend upon it, it is for the interest of the commerce of India, for the interest of the land of India, for the interest of the labourers of India, that this anomaly should be cured as quickly as possible. It is not only the duty, but it is the direct interest of all classes to contribute their fair share to restore the financial position of the State; and, above all, it is the first duty of the Government to take steps in the public interest to that end. Sir, the Government of India, representing the interests of the Crown of England, stands in a peculiar position towards India. England does not exact, and never has exacted, tribute from India. Every rupee of taxes raised in India is devoted strictly to Indian purposes. If England expects or desires advantage from India, it is only in a way entirely consistent with the true interests of India—it is by a reciprocal exchange of products, which constitutes that commerce which I have shown you has showered so many blessings on India, to the full, I admit, reciprocated by England. If, then, Sir, it be our duty to urge upon India to make new efforts to place the finances of the Government in a condition consistent with the public interest, it is for the benefit of India mainly that we do so. In so doing, we shall only be performing the first duty which a State owes to the people over whom it governs.

BANK OF BENGAL AND THE NEW INDIAN PAPER CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

Sir,—Following up the able article in your paper of the 17th, I would beg leave to lay before you a statement of the published returns of the Bank of Bengal for the year 1859 and part of the current year.

It may be premised that, according to the constitution of that Bank, an amount equal to one-fourth of the liabilities payable on demand shall form the cash reserve, and that the limit of circulation in notes and post bills is to be two crores, or two millions sterling.

You will perceive that the annexed returns exhibit the smallest items in the week ending 25th May, the liabilities pay-

able on demand being then 2,300,000*l* sterling; cash, 1,020,000*l*. The largest are shown in the week ending Nov. 2: liabilities, 3,400,000*l*; cash, 2,180,000*l*. The figures under the heads of "post bills" and "cash credits undrawn" are of insignificant amount compared with the other liabilities.—the former never exceeding 110,000*l*, and falling as low as 14,000*l*,—the latter ranging from 35,000*l* to 80,000*l*. It is, therefore, with the current or deposit accounts, and notes, as forming the essentials of the liabilities, that we have more particularly to deal.

It is very evident, from the constant accumulation of cash in the vaults of the Bank of Bengal, over and above the prescribed proportion, either that the management has hitherto been of a character too prudent and cautious to avail of the latitude allowed, or that there does not exist that demand for the Bank's notes and funds anticipated when the charter was framed.

With regard to the first-named proposition, it is well known that the three Government banks are prohibited from doing business in exchange payable out of India. A large source of employment for money is thereby cut off. They are also under certain restrictions as to the currency and character of local bills and loans on securities, which, though calculated to keep them on the safe side, may exclude them from business.

The notes of these banks, though freely circulated in their respective Presidencies, are not a legal tender, and do not bear the responsibility of the Government (as everything of the kind should do in the present state of India). Those members of the community, as merchants, brokers, and bankers, dealing among themselves within the limits of these places, are no doubt glad to get the notes of the only issuing banks; but beyond those limits, and in interior and agricultural districts, where the advantages of a small note circulation are most felt, they seldom penetrate, or effect any useful purpose.

The proposed issue of Government notes, which is unquestionably the best way of increasing the paper currency of India, may to a certain extent supersede the notes of the three issuing banks; but there is no reason why they should be altogether withdrawn. Let them continue to circulate, as at present, within the three Presidencies, forming a mercantile currency as they now do, and let the Government notes, as low in denomination as ten rupees, diffuse themselves over the wide extent of the agricultural and producing districts, where they will remain in circulation until worn out, and only return to be renewed.

The basis of the proposed Government circulation will be as it were "self-constructed" to a certain extent, the first issues being made, it may be supposed, in exchange for silver bullion deposited with the Government Treasury, a proportionate amount of which with reference to the notes in circulation can always be kept up. The Government, as issuers of their own paper, it must at the same time be borne in mind, cannot deposit other obligations of their own as security against such issues. The security must, therefore, consist in a proportionate amount of bullion, and the good faith of the public, that the balance will be forthcoming if wanted. The notes being a legal tender for every purpose, will be as much in favour as Bank of England notes in England. There must, however, be an Issue Department at Calcutta, distinct from the Treasury, but the notes may be payable there, as well as at the Treasuries of Bombay and Madras.—I am, &c., C.

City, 20th March, 1860.

Agriculture.

MEN, SHEEP, OR DEER?
RECLAMATION OF WASTES.

WHILST the natural and growing wants of an increasing and prosperous population render it profitable and desirable to extract as much produce as possible from our soil, and to turn every acre of land to account, we find that throughout the rural districts opportunities of improvement are neglected, wastes which invite reclamation remain unreclaimed, and in the Northern portion of the kingdom desolate wildernesses are artificially made. English landowners too generally are content to see their estates only half as productive as they might and ought to be; but Scotch Highland proprietors seem to have taken William Rufus as their model, and to seek to rival him in converting the homes of men into solitudes for deer. This is no healthy sign of the state of our community. It indicates something wrong in the laws as well as in the system of managing landed property. Nor need we seek far for the cause—the source of the evil. It consists in the aggregation of great masses of land in the hands of owners who have neither the knowledge, power, or capital requisite for using the land profitably. Our law of real property favours this aggregation, and therefore urgently requires amendment. If the great territorial estates of England were divided amongst ten or twenty times the present number of proprietors, the land would become twice or thrice as productive as it is at this moment, and but for our barbarous law of settlement and entail, such a division would be a natural consequence of the progress of the nation. Land in this country yearly becomes more valuable, by reason of the increase of wealth and population, the result of our manufacturing and trading industry. For themselves the landowners do literally nothing; on the contrary, misled by their prejudices, they reject in a great measure the benefits which are offered to them through the industry of others. Let it not, however, be supposed that we regard any minute division of rural land as a benefit to the community. We know that land to be used to advantage must be occupied in tracts of considerable extent. Our farms in England are not too large, but our estates are, because there are numberless men of capital and enterprise ready to undertake the cultivation of our farms, but the actual owners of our territorial estates are commonly without the power or the will to undertake the large expenditure necessary to put their farms into such condition as will fit them for the occupation of capitalist tenants.

It is this want of available capital for improvement which forms a chief objection to large estates, for there is no reason why a large property, properly managed, and let on fair terms to competent tenants, should not be as productive as a smaller one. Experience has proved that the best use of land is not promoted by a system of cultivation by the proprietors. That may answer well enough in new countries, where the operations of husbandry are rude, and the business of agriculture is in a great measure pastoral; but here, where elaborate culture, *i.e.*, high farming—a sort of rural manufacture—is essential to success, it is found that the obligation to pay rent forms an important stimulus to good farming. The old yeoman farmers of a past age died out because they could not compete with farmers who applied all their capital and energy to the cultivation of their farms. The more enterprising of their class sold their small farms, and with the produce embarked, as tenants, in farming on a larger scale, greatly to their own advantage and that of the community. The little proprietors who clung to their small farms dwindled down through mortgages and want of capital, till they or their sons became simple labourers. What is most desirable is that land should be owned as property, as a source of income derived from rent, and that the owner should possess other resources besides his rental. He should be able to invest 2,000*l*, 10,000*l*, or 20,000*l* in the permanent improvement of his property, where such an investment can be made, as on most properties it may be made, with the certainty of yielding a good per centage. Thus, instead of a few persons being landowners exclusively, it would be desirable that land should form a part only of the means of a much larger number of men of property, as a part but not the whole of their property. Then we we should see improving landlords and enterprising tenants, each class in their own sphere working out their own interests, to the advance of the productiveness of our soil and the prosperity of our working population.

Now these remarks are still more applicable to the extensive wastes of Great Britain than to its cultivated lands. In all the higher and mountainous districts of the West of England, Wales, and Scotland, there are immense tracts of land which are capable of profitable improvement and cultivation, but the capital required to be expended for the purpose is considerable, and in many cases some tact and intelligence in adopting and working out such improvements are necessary. In the West of England and in Wales such improvements are gradually being made. In Wales, especially, tillage is creeping up the mountain slopes, and, if the wild sheep in common use could be controlled or displaced by a better and more domesticated breed, great progress would soon be made.

In Scotland, however, the course pursued with the Highland districts is different. A few proprietors improve there with sense and judgment, as, for instance, the improvements made by Mr Matheson in Rossshire, where the farms have been enlarged, and the population employed in working them has been doubled, while the increase of grain and live stock has been far greater. But most of the Highland proprietors seem to be converting their hill properties into mere sheep farms or deer forests, pulling down the cottages, displacing the people, and compelling the abandonment of cultivation. The sheep farms afford a better rental than the crofter tenants who have been displaced, without obliging the proprietor to make any considerable outlay; but if the property had been fairly improved and cultivated, the holdings of the best of the crofters enlarged into productive farms, which would have afforded employment to the rest of them as labourers, and proper roads and drainage were executed, the rental would greatly were exceed that derived from sheep farms and deer forests, while a happy and useful population would people the now gloomy solitudes of the Highlands. We know that the crofter tenants were poor and thriftless; that in bad seasons they suffered great privations; probably the vicious habits inherited from their ancestors, the clansmen and tacksmen —half-peasant, half-soldier, with a spice of the freebooter—made them most unprofitable occupiers; but the proprietors, their chiefs,

have inherited their estates with that burden, and they ought in all honesty to have improved, not extirpated, their crofter tenantry.

That the Highland proprietors have not improved is mainly due to want of capital. At a very recent meeting of the "Inverness Farmers' Society," there was a discussion on "the causes which obstruct the cultivation of reclaimable waste lands; the means by which they may be obviated or removed, and the advantages that would result from a full development of our native agricultural resources;" and, amongst some differences of opinion, all persons present seemed to agree that the main obstacle consisted in want of capital on the part of the proprietors. Mr Gentle said:—"The greatest impediment to the reclamation of waste lands was the indisposition of the owners of the lands either to incur the cost of doing it themselves, or to grant leases long enough for the performance of it by others." There is plenty of labour and capital ready to be embarked in the work of reclamation. But there were formidable obstacles, in the shape of game, "in the way of reclaiming land, furthering cultivation, or even of maintaining such land as was reclaimed. He lived at the boundary where the contest between man and deer was incessant. His neighbour's turnips were plundered, and he was not to cultivate more for winter use for sheep. He (Mr G.) would be plundered next, and this would go on. Every cultivated space adjoining the mountain ranges would suffer first, till the cultivation would cease.....The higher ranges might now be considered as a great game preserve; and the intention that they should become exclusively so was manifest. The most far-seeing of proprietors was now making provisional arrangements with his common tenantry that they must at stated terms demit (quit) to make way for game. *Even proprietors that were averse to the change could not help themselves—they must go with the tide.*" Mr Davidson, a proprietor, seemed to rely on Government loans for improving, and wished the owners to be allowed to expend the money without supervision by the Enclosure Commissioners.

Mr Mackay dwelt on the importance of reclaiming waste lands in Scotland. He considered the chief obstructions to be "want of sufficient information upon its practicability and profitableness, the trouble involved in carrying out systematic improvements on a large scale, and the habits of our landed proprietary, who have not yet come to look upon their land as the raw material from which the largest possible produce should be raised; who are not sufficiently infused with the mercantile spirit to use the appropriate means to attain this result" Farmers are willing to reclaim, but their hands are tied by the proprietors, and their interest in it is greater than that of the tenants. Nothing can be more fallacious than the idea "that the Highlands of Scotland have a redundant population, to whom every facility should be afforded, and every possible encouragement extended, to induce them to emigrate." He takes it for granted that landlords must borrow money to reclaim. "The day is not far distant when the advantages of reclamation and improved tillage will be understood and appreciated. When that day comes, we shall hear no more of destitution or forced emigration." Yet, while we are waiting for the coming good time which Mr Mackay promises, game preserves and deer forests are rapidly extending over the Scotch Highlands.

Mr Anderson "thought that the cause which obstructed the reclamation of waste land was the want of money by the proprietors." Mr Greig, banker, said:—"The causes which obstructed its progress appeared to be the pecuniary inability of the proprietors in general to execute the work themselves, their disinclination to sell any part of their lands, and the unwillingness or legal inability to let them for such lengthened terms and under such liberal covenants as would induce tenants to expend their capital in the reclamation." These were the ostensible causes, but "the real foundation of the whole lay in the impolitic laws regulating the tenure and rights of landed property." And another speaker, Mr Gordon, admitted the existing law "tended to reduce the number of proprietors, and to bring the land into somewhat unmanageable masses." And he added:—"It is a singular fact, and one that shows the anomalous position of landed matters, that the possessors of capital are so anxious to invest it in land as to be content with a return of 3, often 2½ per cent., while 5 per cent. and upwards can be realised in improving waste land, towards which capital would flow steadily on fair terms."

Here, then, we find the land brought into "unmanageable masses," and the owners, not having the inclination or capital to render it productive by cultivation, reduce it to wildernesses, giving them, without previous outlay, some rent as sheep-walks and deer forests.

This subject has attracted the attention of philosophical writers, for we find in a work entitled "The Strength of Nations," by Mr Andrew Bisset, the depopulation of the Highlands of Scotland is regarded as tending seriously to diminish our national strength. And, in tracing the causes of the decay of nations from the earliest historical periods down to our day, Mr Bisset shows that the accumulation of "unmanageable masses" of land in the hands of a few persons is a common symptom—whether it be a cause or a consequence—of national decadence. In reference to the Highlands of Scotland, Mr Bisset considers that the land was the property of certain clans or tribes, and that in reality the small holders had at least as good rights to their crofts as the English copyholders under the feudal system had to their tenements, and says:—"On the evening before the battle of Bannockburn, Robert Bruce promised that the heirs of all who fell should receive their lands free.....If the English had won the battle, the followers and clansmen of the Highland chieftains would probably have been in as good a condition as the English copyhold tenants,—those who were originally the conquered bondsmen of the Anglo-Normans. It is evident that the laws of England would not permit any lord of an English manor, under the pretence of improving his property, to expel the copyholders of the manor. But the Highlanders, who have of late years been expelled from the country which their forefathers had occupied for so many ages, so far from being in the condition of conquered bondsmen, were the freemen by whose swords their chiefs had so long held their territories, and in many instances had first acquired them." As a matter of history, this point is well worth investigating, but, as a practical question, it is clear the proprietors' rights are incontestable, though the absence of prudence and humanity in the exercise of them can scarcely be called in question. To those who would trace the intimate connection which has existed in various States and in different ages between the decline of population in numbers and in well-being and the aggregation of landed property into "unmanageable masses," Mr Bisset's work will afford much information, and will suggest much useful inquiry. It matters not that Mr Bisset's work was written under the influence of the lately prevalent mania, and that, fearing invasion, he would train all the population to arms for national defence, or that he regards the depopulation of the Highlands with intense disgust, mainly because it diminishes the number of men capable of bearing arms. Without sympathising in that sentiment, we can have no hesitation in admitting that the strength of a nation consists in a numerous and well-employed working population, or in regretting the wanton waste and misery caused in the Highlands of Scotland by driving out men to make way for sheep or deer, rather than to improve a property by reclaiming wastes and converting a crofter tenantry into industrious farmers and farm labourers.

AGRICULTURAL FACTS.

To collect with discrimination, and to arrange in lucid and convevient order, the "facts" concerning agriculture which are recorded yearly in the now numerous works of agricultural literature, will ever be a useful and meritorious service to the agricultural community. This has been well done by Mr R. Scott Burn in his "Year-Book of Agricultural Facts for 1859," published by Blackwood and Sons. In this work the reader will find classed under convenient heads much of the notable or novel circumstances which have been published during the past year. And the compiler has not confined himself to this country, but has sought for agricultural facts from the Continent of Europe, from America and Australia. We may notice, however, two remarkable deficiencies in a work professing to be the year-book of agrienltural facts, viz., the questions which have been mooted between landlord and tenant, and the facts about game. Now on both topics the year just passed away has been prolific in facts; and these facts have now at least as important an influence on the progress of agriculture as the extracts from works on crops, culture, and live stock. Why is this? Is it a weak fear of offending the owners of farming land? Depend upon it such a one-sided exposition of the facts and wants of agriculture neither does justice to the public nor the compiler himself. He has taken passages from our own agricultural columns, and there he might have found facts of no little significance concerning these two omitted heads.

Literature.

SCOTLAND IN THE MIDDLE AGES. Sketches of Early Scotch History and Social Progress. By COSMO INNES, Professor of History in the University of Edinburgh. Edinburgh: Edmonston and Douglas.

"These Sketches," the author tells us, "were read in the shape of lectures to a class in the University of Edinburgh," and he trusts that this "origin may be a sufficient excuse if they be found wanting in that originality of facts or views, without which no one would deliberately compose a book of History." Professor Innes' book, however, does not need this excuse, at any rate on this side of the Tweed, for there is scarcely any portion of modern history less familiar to the English reader than the early history of the Northern half of his own island. The maps of Scotland during the first stages of its civilisation with which the Professor's work is enriched, and the amount of labour which he has bestowed on this part of his subject, would alone place his book above the ordinary class of historical summaries, and give it an independent and original value. The only thing which we have to complain of in this respect arises from the form into which his observations were originally thrown. The two first chapters, which treat of the days of Charlemagne, the feudal system, and the early history of the Southern part of our island, however useful and necessary in a course of University lectures, are quite supererogatory in a work which in its latter portion presupposes in the reader a general acquaintance with such historical common-places. This strikes us the

more, because the author does not, as his title would almost imply, give us any connected outline of early Scottish history, but deals with the social, political, and ecclesiastical condition of Scotland,—particularly and almost too specially with the last,—during certain early epochs, such as the days of Malcolm Canmore and of David I. Certainly, the class to whom all but the first chapters are really addressed, are not likely to derive much new information from these. With this exception, however, the work is one of sterling value, and will well repay a careful perusal. In his third chapter the author deals with the first formation of Scotland out of the Principalities of the Scots and Picts and the Northern portion of the kingdom of Northumbria. The reign of David I. affords him somewhat better and safer materials for estimating the progress which had been made in the arts of civilisation. This subject is more fully developed and continued in particular branches by separate chapters on the Scotch Burghs —Vestiges of Ancient Law—The Ancient Constitution of Scotland —Early Dress and Manners—Language and Literature—Dwellings, and Architecture with the Arts connected with it. A Postscript gives a brief reference to some fresh light which has just been thrown on the Pictish controversy, rendered so memorable by Sir Walter Scott in his novel of the "Antiquary." In an Appendix are some useful supplementary documents, and, what Southern readers will much appreciate, a glossary.

We are not quite satisfied with the proof adduced by our author for his broad statement that "it cannot be questioned that the language of Scotland,—king, court, and people, Highland and Lowland, except a narrow strip of sea coast,—in the reign of Malcolm Canmore, was Celtic or Gaelic." "When," he says, "the sainted Margaret, speaking the language of Saxon England, wished to convince the Scotch clergy of their error with regard to the times of Easter and Lent, her husband, Malcolm Canmore, was obliged to translate the discourse of the Queen, even for the clergy, into Gaelic." We suspect that religious differences had quite as much to do with the necessity of translating for the Scotch clergy, as any strangeness in the Saxon tongue. It is not the first time that "Dim Sassenach" has been only a mode of expressing more forcibly a rooted prejudice on the part of the affected *ignoramus*. Professor Innes admits that "even under Malcolm Canmore there are sufficient proofs of a tendency in the rulers of Scotland towards Southern manners and civilisation"; and he speculates, with great probability, on the number of "Northumbrian thanes and churls, who would find a reward and resting-place in the castles and glens that had belonged to the faction of Macbeth": he states, too, that "long before" the time of David I., "the high officers of State, the attendants of the court, were of the Southern strangers," Saxon or Danish forming a large element. We cannot but think that in the time of Malcolm Canmore there was a considerable minority at least, if not an equal number of Saxons or a kindred race, of all classes, who owed allegiance to the King of the Gaelic Scots, and that the union of Scot-land proper with Pict-land (whether the Picts themselves were akin to the Gaels or to the Teutons), led to the constitution of a kingdom in which there were two populations, one Gael and the other Saxon. At the battle of the standard, the two parties came to an open quarrel, which had most injurious effects on the fate of the contest. There is not a sufficiently full account given of the new evidence, alluded to in the Postscript, to enable us to pronounce an opinion as to its effect on the much controverted point of the origin and race of the Picts.

The Professor gives a curious and rather detailed account of Iona and the Culdees, and he affords us "a curious glimpse of national prosperity in Scotland, in the reign of one whom we are almost bound to believe a usurper and bloody tyrant. Our old chroniclers all agree, that the reign of Macbeth, of seventeen years' duration, was a time of great abundance and strict administration of justice. Old Winton tells us that—

> 'All his time was great plenty,
> Abounding both on land and sea.
> He was in justice right lawful,
> And til his lieges all awful.'"

And it seems that "the defeat and death of Macbeth were the commencement of great troubles in Scotland, which became the scene of constant disputed successions and civil wars—the deadly war of hostile races, which continued with little intermission till the accession of David." Of that monarch, our author says that he "was the founder of the *law* still more than of the *Church* of Scotland." He vindicates him from the imputation of being "a priest-ridden King"; and states that "his life seems to have been one of constant action and activity. Besides the movements which we learn from the public or historic events of his reign, his private charters show continual change of residence." Among the various points in the social history of that time to which our author draws attention, the following account of early Scottish agriculture may be notuninteresting:—

> Great attention was bestowed upon agriculture from the earliest period of our records. The same corn was grown as is now used. Wheat was grown even in Morayshire in the thirteenth century. We find everywhere strict rules for the protection of growing corn and hay meadows, which were rendered more necessary by the existence of a custom, formally sanctioned under Alexander III., who declared it was of use, by ancient custom and the common law throughout Scotland, that travellers, passing through the country, might quarter for one night on any barony, and there pasture their beasts—saving only growing corns and hay meadow. Roads appear to have been frequent, and though some are called the green road, *viridis via*, and by other names indicating rather a tract for cattle, others, bearing the style of "high way," *alta via*, "the king's road," *via regia*—*via regalis*, and still more, the caulsey or *calceia*, must have been of more careful construction, and some of them fit for wheel carriages. We find agricultural carriages of various names and descriptions, during the thirteenth century—*plaustrum*—*quadriga*—*charete*—*carecta*—*biga*—used not only for harvest and for carriage of peats from the moss, but for carrying the wool of the monastery to the seaport, and bringing in exchange, salt, coals, and sea-borne commodities. The abbey of Kelso had a road for waggons, to Berwick on the one hand, and across the moorland to its cell of Lesmahagow in Clydesdale. A right of way was frequently bargained for and even purchased at a considerable price.
>
> On the estates of the monasteries, water-mills and wind-mills were used for grinding corn in the thirteenth century and previously, though the rude process of the hand-mill kept its ground in some districts of Scotland to a recent period. In the reign of Alexander II., the monks of Melrose purchased the right of straighting a stream that bounded their lands of Bele in East-Lothian, on account of the frequent injury done by its inundations to the hay-meadows and growing corns of the Abbey.
>
> The Monasteries of Teviotdale had necessarily a great extent of pasture land; and the minute and careful arrangement of folds on their mountain pastures for sheep, and byres for cattle, and of the lodges or temporary dwellings for their keepers and attendants, shows that they paid the greatest attention to this part of their extensive farming. But the immense number and variety of agricultural transactions, the frequent transference of lands, the disputes and settlements regarding marches, the precision and evident care of leases, the very occurrence, so frequently, of the names of field divisions, and of the boundaries between farms, settled by King David in person—show an enlightened attention and interest in agricultural affairs, that seem to have spread from the monastery and reached the whole population during that period of national peace and good government, which was so rudely terminated by the war of the Succession.

On the customs of the primitive Scottish burghs, curious light is thrown by "the earliest charter of Perth, preserved in one of William the Lion":—

> It commences with a prohibition against any stranger merchant (*mercator extraneus*) buying or selling anywhere within the sheriffdom, except at the burgh—"but," says the King, "let the stranger merchant come with his wares to my burgh of Perth, and there sell them and invest his money." The foreign merchant is also prohibited from cutting his cloth for retail in the burgh, except from Ascension Day to the feast of St Peter ad Vincula; between which terms they were allowed to cut their cloths for sale, and buy and sell their cloths and wares as freely as the burgesses. This long period, from ten days after Easter to the 1st of August, allowed for strangers retailing, was a great relaxation of the privileges of exclusive trade. A singular privilege follows. No *tavern* (*taberna*) is to be allowed in any place within the sheriffdom of Perth, except where a person of knightly degree is lord of that place, and lives in it; and then only one tavern. This was plainly to secure for the burgesses the monopoly of retailing drink over the whole country, if that could be effected by a royal charter. The King grants to the burgesses the right of having their merchant guild, excluding fullers and weavers (*fullones et telarii*). This curious exclusion of artisans, not generally ranked as merchants, I do not pretend to explain. We may conjecture that the trades employed in the making of cloths had risen to greater wealth than the other craftsmen, and had pretended to an equality and participation of the privileges of the merchant guild, which it required the royal authority to repress. The charter next prohibits any one from making cloth, dyed or shorn, within the sheriffdom, except a burgess and guild brother, paying his share of the town burdens and royal aids; and any cloth found contrary to that prohibition, is to be dealt with according to the custom that existed in the time of King David. The King prohibits strangers from buying or selling hides or wool, anywhere but in the burgh.

The same sort of authentic sources of information tell us what were the manufactures of Scotland:—

> Some of the privileges granted by King David I. to his burghs bring us acquainted with a manufacture which must have been extensively carried on in several districts of Scotland, and perhaps in all its villages. This was the making of cloth, which we learn from the charters I formerly brought under your notice, was both dyed and shorn (*tinctus et tonsus*). We have, too, the trades of weavers, *litsters*, that is, dyers, and fullers, very early enumerated among the burgher classes—all, I think, pointing to a manufacture of our native wool into a cloth of somewhat higher quality than that fabric of *wad* (or wadmail), a coarse home-made cloth which formed a part of the rent of farms in Shetland and Orkney, and I believe all over Scandinavia.
>
> Still, in the reign of David, and even in that time of prosperity of which his reign was the commencement, the native produce of our country, its hides and tallow, its wool and furs, was chiefly exported unmanufactured.

"The earliest mention," says Professor Innes, "which I have found of coal works in Scotland, is in a charter of 1291, granted by William de Oberwill, Lord of Pettincrieff, to the monks of Dunfermline. The monks are to dig for coal wherever they choose, except arable land, but only for their own use, and not for sale."

Some details respecting the early exports and imports are also supplied in the same part of our author's volume, and he supplements these by some curious extracts from an old merchant's ledger, the dates of which extend from 1493 to 1503. Andrew Haliburton, the owner of this ledger, was a Scotch merchant, residing mostly at Middleburgh, but carrying on business at the fairs at Berri, Bruges, and Antwerp. From letters left in the book, we find he was "conservator of the privileges of the Scotch nation at Middleburgh." His correspondents were persons of all ranks, up to the King's brother and the Archbishop of St Andrew's. He was chiefly a buyer and seller on commission, his charges for which he calls "my service."

His accounts are kept in the most simple and intelligent manner, the one page giving credit for consignments of goods and the value or money produce of them, and the other showing purchases and expenses connected with transmitting goods from the Continent to his correspondent in Scotland. The Scotch exports were but little varied. Thus, in the year 1493, he received on consignment from Lawrence Tayllyefer, three sacks of white wool, which he sold to men of Tournay for thirty-one marks each, equivalent to 61*l* 18*s*. He received a sack of middling wool, which he sold for twenty-six marks, or 18*l* 1*s* 6*d*. In return, he shipped for Scotland two butts of Malvoisie, which, with all charees, cost 13*l* 14*s*. In 1495, he received out of the Eagle, a ship which either belonged to him, or was a constant trader between Scotland and Flanders, on account of the same party, a sack of skins containing 465; and he enters as sold out of this hop, 306, for sixteen nobles the hundred, amounting to 14*l* 8*s*; and the outshots were sold for 4*l*. He received by the ship Cowasch, and out of the barque Douglas, certain sacks of forest wool, which he sold in Berri, and to a Hollander in Middleburgh. This forest wool seems to be what is elsewhere called white wool. The returns were made in canvas, potyngary Claret wine and Rhenish vinegar, and a rundel, in which were packed the following commodities—a roll of canvas, three couple of fustian, a stek of velvet, costing 10*s* 6*d* the ell; a stek of damask, costing 5*s* 6*d*; a stek of satin, costing 6*s* 8*d*; three dozen pepper, costing nineteen pence a pound; two dozen ginger, costing seventeen pence the pound; two pound canell, at 4*s* 8*d* the pound; mace, costing 3*s* 10*d*; cloves, 3*s*; galyga, costing 5*s* 4*d*; swenvel, 3*s* a poond; notmegis, 2*s* 2*d*; saffron, 1*s*.

But for further information on this and other equally curious facts in early Scottish commerce, we must refer our readers to Professor Innes' book itself, which, as may be supposed from the extracts we have given, is a repertory of many unknown or little known facts on this and similar social questions. The chapters on Literature and Architecture, if with less pretensions to originality, will also be found to possess much interest, and to give a clear and condensed account of their respective subjects. Altogether the work before us is a valuable addition to any library of standard books of reference.

(1) Cracow in 1815 and 1860. London: Ridgway. 1860.

(2) Some Remarks on our Affairs in China. London: Ridgway. 1860.

(3) Mr Disraeli, Colonel Rathbone, and the Council of India. London: 1860.

(4) A Letter to Colonel Arthur Cotton upon the Introduction of Railways in India upon the English Plan. By E. E. Merrall, Civil Engineer. London: Effingham Wilson. 1860.

(5) A Plan for the Equalisation of the Property and Income Tax. By Ebenezer Cooke. London: E. Wilson. 1860.

We shall dismiss the pamphlets, of which the titles are given above, with very brief notice. It will be sufficient if we so characterise them as to give our readers a general idea of their contents and manner of treating the subjects of which they speak.

(1) "The crimes of the House of Austria," both "against its own liege-subjects," and against the weaker States which border on its frontiers, constitute, perhaps, the darkest catalogue of offences against the laws of nations and of morality that can be laid to the charge of any modern State in Christendom. The well-known lines which represent the possessions which Mars gives to other States as granted to Austria by Venus, and which conclude with the advice, *Tu felix Austria nube*,—point to the most innocent part of her policy. Broken treaties and violated oaths, even more than marriage alliances, have been the foundation on which a now not very stable Empire has been built up. The well-written and (a few weeks ago) seasonable pamphlet on "Cracow in 1815 and 1860" refers to one of the blackest acts of national crime of which even the House of Hapsburg has been guilty. It is "addressed to the Plenipotentiaries of the European Powers" [then supposed to be] "about to assemble in Congress." The ground on which the author calls their attention to a series of events which seem to have no very direct bearing on the affairs of Italy is the following:—

The mere promises of Austria as to Venetia, he alleges, are utterly worthless considered simply as Austrian promises. Punic faith is not more trustworthy. No more solemn pledges than those with which, at different times, Austria has bound herself to respect the nationality and institutions of Poland have ever been made. "Nevertheless this nationality has been trodden underfoot, and every one of the institutions guaranteed has been subverted. And will not every one ask himself whether stipulations in favour of Venetia are not likely to experience the same fate as those relative to Cracow and Galicia, which have become dead letters?"

The author recommends that the nationality of Venetia be guaranteed by the Great Powers. Considering that the independence of Cracow was also guaranteed by them, and that the only resistance made to its annexation took the form of mere protests from England and France, a guarantee may seem to be a weak security. The pamphleteer, however, points out differences, "which prove that it would be unwise to conclude that the result must inevitably be the same in the one case as in the other. A look at the map of Europe will suffice to indicate one of these differences, which is in itself a guarantee in favour of Italy such as Poland unhappily could never command. The frontiers of Galicia are inaccessible, except through the territories of Powers which are as great or even greater enemies of Polish nationality than Austria; Venetia, on the contrary, has a maritime frontier open to the navies, and consequently also to the representations of all the maritime Powers, while on other points her frontiers border on those parts of Italy which have acquired their independence, and upon Sardinia, which country is in possession of a Parliament, a free press, and a fine national army; all of which circumstances are so many guarantees in favour of Venetia, as they will enable Europe to watch over and cause to be respected, whatever conditions may be stipulated in support of her rights."

The "irresistible logic of events," which has torn asunder the Treaty of Villafranca, not by cannon balls, but by universal suffrage, has annulled, before they could possibly take effect, the engagements of Austria in regard to Venice. The essayist's suggestions, like much good advice, become simply inapplicable. The value of the greater part of his pamphlet, however, is not affected by this circumstance, any more than the worth of a sermon need be by stripping it of its text. It contains a short but clear statement, based on authentic documents, of the conduct of Austria towards Cracow, from the signing of the Treaty of Vienna in 1815 to the absorption of the Free City into the Austrian Empire in 1846. Those readers who desire to refresh their memory of these transactions, without the labour of consulting voluminous blue-books or as voluminous histories, may usefully turn to the succinct narrative of the pamphleteer.

Before taking leave of the pamphlet, we may advert to an apparent misapprehension on the author's part as to the real nature of the doctrine of non-intervention, now so generally received as a fundamental maxim of English foreign policy. It does not mean, as he seems to think, that henceforth England is to isolate herself in selfish seclusion from the communion of nations, or, as he expresses it, "to content herself with recording, as a simple annalist, the wars, the negotiations, and the treaties taking place between the other nations of Europe, and to submit passively to all the changes that these might introduce into the public law and international relations of Europe." This, indeed, may be the interpretation put upon it by politicians of the school of Mr Bright and Mr Cobden. In this sense, it is merely the crotchet of a particular *coterie*. But in the sense in which it is understood by our ablest statesmen and political thinkers, it means the principle of not interfering ourselves, nor allowing other nations to interfere, in the domestic affairs of a foreign people. To intervene in order to secure the principle of non-intervention, though a paradox in terms, does not involve any inconsistency in conduct. The confusion between the two kinds of non-intervention, maintained respectively by the peace-at-any-price party, and by the advocates of national independence, is often so great, that it is desirable to repeat the correction of the mistake whenever occasion arises.

(2) The second pamphlet named on our list adds little or nothing to our knowledge of the existing state "of our affairs in China." The remarks, however, which it contains are sensible and considerate. The author recommends a policy at once firm and forbearing towards the Chinese, whom he represents, under rather too innocent a metaphor, perhaps, when he says:—

China may be likened to a fine milch cow, left to roam in her own rich pasture, and with no other faults (being much goaded) than occasional outbursts of sonorous bellowing, and other harmless manifestations of fury. It is now proposed to cure her effectually of these infirmities by striking her down upon her knees, running a red-hot iron through her nostrils, beating her sorely over the head and loins, stinting her of her food, and an extensive course of bleeding and blistering. Whether the milk can steadily be depended upon in the same quantities or at the same charges as heretofore may be doubted.

We are not aware that such strong remedies as these are proposed. The author, however, is right in urging that, unless we wish to be embarrassed with a revolutionised empire on our hands, any too violent shock to the tottering *prestige* of the existing dynasty, and to the authority of law and order which are bound up with it, must be carefully avoided. The existing Government cannot, without probability of serious consequence to itself, to its subjects, and to England, be too deeply humiliated. Apology for the past, and security for good faith and respectful treatment in the future, are all that ought to be, and probably all that will be, demanded by the special Envoy, and enforced, if need be, by the expedition that is to accompany him.

(3) We do not feel any desire or obligation to enter into Colonel Rathbone's voluminous exposition of the wrongs he imagines himself to have suffered at the hands of Mr Disraeli, who would not, or could not, make him a member of the Council of India,—having rashly promised to do so. We have no opinion whatever to pronounce on the private misunderstandings of Mr Disraeli and the gentlemen who wrote for him in the *Press;* nor ought we to be asked, even indirectly, to give one.

(4) We have not space to say more of Mr Merrall's Letter than that it is marked by apparent knowledge of detail and mastery of his science. The author discusses the following questions in the following order:—

1st. Which is the most important [for India]—works of irrigation or works of communication?

2nd. What kind of works of communication are best suited for India—navigable rivers, good common roads, canals, temporary railways, or permanent railways?

3rd. If the latter of these be adopted, will they pay a fair dividend for the capital expended?

Mr Merrall's arguments point to the establishment of permanent railway communication as the great industrial necessity of India.

(5) The pamphlet in which Mr Ebenezer Cooke developes a "plan for the equalisation and adjustment of the income tax," is written with a vigour and simplicity very unusual in the discussion of financial questions. Whatever may be thought of the course he recommends, Mr Cooke at least knows what he himself means and wants, and is capable of making his readers understand it too. Taking for granted that the income tax must henceforth be considered as a permanent source of revenue, he urges that the inequalities which were patiently borne when they were considered as incidents of a temporary and exceptional measure, will scarcely be tolerated in perpetuity. He points out in what way he thinks they may be best remedied. Dividing all incomes into three classes,—(1) those derived from permanent property, (2) those dependent upon and ceasing with the exertions of an individual, and (3) those derived from the joint employment of capital with labour and talent,—he seeks to ascertain in what varying proportions the same nominal revenue should be taxed, according as it proceeds from one or the other of the three sources indicated. The result at which he arrives is, that if 10d in the pound is paid on income derived from permanent property, 5¼d in the pound should be paid on incomes consisting of professional earnings and salaries, and 6¼d on incomes derived from manufactures, trades, &c. The estimates and calculations on which Mr Cooke bases this result are, perhaps, taken for granted too summarily; and the practicability of his scheme, apart from its intrinsic equity, is not sufficiently established. But his conclusions are clearly reasoned out from his premises.

Foreign Correspondence.

(FROM OUR CORRESPONDENTS.)

PARIS, Thursday.

Every day the French Government shifts its ground on the rag question. At first it promised as a concession to England that the prohibition to export rags from France should be taken off; then it virtually violated the promise by giving the paper-makers here an assurance that such a heavy duty on exports should be imposed as would render the purchase of rags for export impossible; and, within the last few days, in answer to a deputation of booksellers and publishers, complaining that if the rag market be thrown open paper will become dearer, the Minister of Commerce and Agriculture has declared that, "before making any concession to the English," he will enter into negotiations with neighbouring States for the purpose of seeing if some general system of duties on the export of rags cannot be adopted. When these negotiations will end, heaven only can tell; but the Minister himself told the deputation that they are not at all likely to be completed in time to enable a Bill to be presented to the Legislative Body in the course of the present session. This means, I imagine, that nothing is to be done this year at all events. Even if a Bill should be presented to the Legislature, it is not at all certain that it will pass; inasmuch as the protectionist and prohibitionist fraternity in that body, smarting at the treaty with England, will naturally be hostile to any tariff reforms the Government may propose. It is a great pity that the negotiators of the treaty should have entirely neglected to deal with an article of so much importance as rags. If they had been more careful, the prohibition to export rags would at this moment, from the ratification of the treaty, have ceased to exist.

The discussions of the Council of State, in presence of the Emperor, on the proposed modifications of the duties on sugar, coffee, cocoa, and tea, having been concluded, the Bill prepared has been presented to the Legislative Body. This Bill, in essential points, is the same as the table communicated in my letter in the ECONOMIST of the 17th; but it makes these changes:—As regards sugar, it proposes that inferior qualities may be admitted at lower duties, according to their quantity of saccharine matter. The Government is to create a "sub-type" for such qualities, and in the meantime they are to pay the same duties as sugars of the first "type." Moreover, with respect to native and colonial refined sugar, the Bill proposes that it shall pay, not as at first intended 10 per cent. added to the duties on raw sugar, but 5f more than those duties per 100 kilogs. The drawback to be allowed on refined sugar exported is to be calculated henceforth at the rate of 80 and 83 kilogs (according to quality) per 100 kilogs raw, instead of 75 kilogs per 100 as heretofore; in other words, to get back the duty paid on 100 kilogs raw, refiners must send out 80 or 83 kilogs of refined. The Bill is silent as to the import of foreign refined sugar. With regard to coffee, the Bill makes a slight modification; it is, that coffee from the French colonies in Western Africa shall pay 30f the 100 kilogs, the rate fixed for that of other colonies, instead of 35f as at first proposed. Refiners are protesting against the change with which they are threatened; but it is to be hoped that no heed will be paid to them. Some persons are making lugubrious calculations as to the loss which the reductions will cause to the revenue; but the increase of consumption which will take place cannot fail in a few years to cause that loss to be recovered; and, besides, the increase in consumption will have the effect of aiding powerfully in the accomplishment of an object which the French consider as of national importance,—the development of merchant shipping as a nursery for seamen for the Imperial navy.

The Minister of Finance reports to the Emperor, through the *Moniteur*, this morning, that he has just completed the definitive settlement of the Budget of 1858; and that it shows that the total receipts for the year were 1,858,493,891f; and the total expenses, 1,871,381,904f. If, however, he says, we deduct a sum of 613,355,567f, which figures on both sides of the account, and which is introduced for the sake of regularity, we shall find that the real Budget of 1858 stood thus:—Receipts, 1,258,026,337f; expenses, 1,245,138,324f. Surplus, 12,888,013f. To this surplus the Minister says there must be added "the balance of loans standing over from preceding years, which amount, after deducting 20,000,000f for works for preventing inundations, to 18,917,108f." The total surplus to be carried over to 1859 was consequently, he declares, 31,805,121f. He remarks that, notwithstanding the excess of receipts in 1858, a sum of 29,970,364f was paid for extraordinary works, and one of more than 10,000,000f for the Chinese expedition. Had it not been for these two items, the surplus would have been within a trifle of 52,000,000f, or, deducting 4,000,000f paid by railway companies, and which cannot be considered as ordinary receipts, 48,000,000f.

We have now arrived at the period of the year at which the annual meetings of the great companies are held to receive reports from the directors on the operations of the preceding year, and to declare dividends. The general annual meeting of the Western Railway has taken place this day. A sum of 37f 50c (1*l* 10s) per share was ordered to be paid as the revenue of last year. Of this sum, 17f 50c were paid in October last as interest. The Orleans shareholders meet to-morrow; the Parisian Gas Company to-morrow; the Paris Omnibus Company, Saturday; the Southern Railway, 24th April; the Lyons and Mediterranean Railway, 26th April; the Northern Railway, 26th; Lyons and Geneva, 28th; Credit Mobilier, 30th.

The Company (French) of the Colonial Banks (Banques Coloniales) is now paying for the second half of the year 1859 a dividend of 25f 49c per 500f share of the Ile de la Reunion (Bourbon) Bank, and one of 23f 50c for the Bank of Guiana.

The Company of the Services Maritimes des Messageries Imperiales has at last organised a line of mail steamers between France and Brazil. The first vessel is to leave Bordeaux for Rio Janeiro on the 24th May next, and there are to be departures every month. Four steamers are to be employed, and each is to be of 500-horse power. The steamers are to touch at Lisbon.

In a recent letter I noticed that M. Mires, the well-known Israelite speculator and director of the Caisse Generale des Chemins de Fer, had published a letter in the newspapers contending that, in order to create confidence in companies in shares, which during the last year or two has been a good deal shaken, the projectors of enterprises ought to undertake to guarantee subscribers of shares the integrity of their capital. By advertisements in the newspapers he now makes known that, having undertaken to place out 30,000 shares of 20*l* English each for a railway from Pampeluna to Saragossa in Spain, he, his partner M. Solar, and the Caisse Generale des Chemins de Fer, of which they are the head, will "guarantee to reimburse the shares at 20*l*, if a year after the commencement of the working of the line,—that is to say, on the 1st of January, 1862,—they should fall below that sum." This extraordinary proposition has naturally excited much attention in the money market; but no one believes that it is destined to obtain general imitation. As regards its merits opinions differ: persons who have great confidence in M. Mires and the Caisse Generale, think highly of it; but those who do not admire that gentleman and his operations, hold that it is little better than a desperate effort to excite a speculative spirit at a time when the state of the market and the political situation are opposed to speculation. Perhaps also the remark might be made that if the projected railway be a really sound commercial enterprise, it

would hardly be necessary to give a guarantee in order to raise so small a sum as 600,000*l*, especially as the advertisement says that the shares are to receive 6 per cent. interest. It is stated that the line is 117 English miles long, and that a contract has been entered into to execute it and supply it with rolling stock for 1,496,000*l*.

Very large purchases of wine and brandy have been made in this country by English dealers in consequence of the modification of import duties. I notice that some of the newspapers state that sales to the amount of about 1,000,000*l* sterling have been effected, but this seems a gross exaggeration. The wine producers of the Herault have written to Mr Cobden to complain that the levying of duties in England according to the degree of alcoholisation will, in the manner proposed, be injurious to their interests; and he has promised to draw the attention of the English Government to the matter.

The new debates in the English Parliament about Savoy were certainly not calculated to render the political situation more satisfactory. And yet there has been a marked rise on the Bourse. This is owing partly to large purchases of *rente* having been made or announced from the Caisse des Depots et Consignations, and another public establishment; partly to the direct intervention of some influential speculators, and even it is said of the Government itself; and partly to the state of the market. The following are the quotations:—

The weekly account of the markets is as follows:—

Flour at *Paris*, yesterday, was 52f to 56f, and for some lots 57f the sack of 159 kilogs, according to quality. The four marks were 55f 75c to 56f for the present month and April, 56f 75c to 57f for May, 57f for May and June.

Wheat.—Operations yesterday were limited, but prices were firm and even rose slightly. Ordinary was 30f 50c to 31f the sack of 120 kilogs; good, 31f 50c to 33f; choice, 33f 50c. Of the provincial markets, 47 rose from 5c to 1f 20c the hectolitre, 23 fell from 10c to 1f 30c, and 48 underwent no change.

Cotton.—The sales at *Havre*, in the week ending Friday, were 10,908 bales, and prices rose from 1f to 2f for all the qualities except the "very low" of different sorts, low New Orleans being 100f, and very ordinary ditto 106f the 50 kilogs. The arrivals of the week were 21,306 bales. Business has not been active this week, and prices have fallen: yesterday, low New Orleans was 99f.

Coffee.—At *Havre*, in the week ending Friday, business was very important, as many as 21,700 sacks having been sold: Hayti, Port-au-Prince and Jacmel, at 78f to 81f the 50 kilogs in bond; Cape and Gonaives, 81f to 82f; Rio, not washed, 74f to 75f; ditto washed, 85f; Ceylon triage, 132f 50c duty paid. to which some lots of damaged were sold. The arrivals were about 14,000 sacks. This week sales have been rather large: quotations have been 76f in bond; Hayti, Gonaives, 81f; Malabar triage, 133f 50c duty paid; Porto Rico, 100f in bond. There have also been some sales of damaged Hayti. At *Bordeaux*, last week, quotations were: Martinique and Guadaloupe, 3f 25c to 3f 30c the kilog, duty paid; Mysore, 2f 80c to 2f 82c; Ceylon native, 2f 60c to 2f 62c; Java, 2f 74c; Demerara, 2f 86c. The sales were upwards of 7,000 sacks Java and Demerara. This week 600 bales Mocha have been sold, but the prices are not given. At *Nantes*, last week, 150 sacks Java were sold at 139f the 50 kilogs. There have been no sales this week. At *Marseilles*, last week, 4,500 sacks Rio, not washed, went at 72f to 80f, and 400 ditto washed, 81f.

Sugar.—The demand at *Havre*, in the week ending Friday, was active, though not so much so as that of the preceding week; and prices slightly advanced. 300 casks French West India went at 62f 50c the 50 kilogs duty paid; 582 casks ditto expected, 62f 75c to 64f; 770 bales Reunion, 64f 50c; 1,220 casks Havana, 37f to 38f 50c in bond. The arrivals were nearly 6,500 sacks and 210 casks. This week the only sale has been a small lot of French West India at 62f 50c. At *Bordeaux*, last week, upwards of 6,000 bales Reunion were sold at 62f 50c to 64f 75c the 50 kilogs. 100 bales French India at 62f. There were no sales of Havana or Mauritius. Nothing has been done this week. At *Nantes*, last week, as many as 119,000 bales Reunion, and some lots of other sorts, were sold. Quotations were: Reunion, 63f; Mauritius, 66f; Guadeloupe, 60f 50c; Havana, 37f. This week upwards of 3,200 bales Reunion "gros grains" have been sold at 66f. At *Marseilles*, last week, upwards of 5,000 bales Reunion were sold at 62f 50c to 66f. A large quantity of damaged ditto was offered by auction, but very little of it was sold.

Indigo.—At *Havre*, last week, the sole sales were two cases Bengal at prices kept secret; and there were no arrivals. The article has not been mentioned this week. At *Bordeaux*, last week, the sales were 5 cases Bengal, 4 Madras, 12 Kurpah, 21 Java; but the quotations are not given.

Hides.—The demand at *Havre*, in the week ending Friday, was slack; the sole sales being 673 dry of La Plata, which went at 150f to 161f 25c the 50 kilogs duty paid; and 886 damaged Mexico dry, 69f 50c to 97f 50c. The arrivals were about 17,000 and some bales. The sales this week have not been numerous: Buenos Ayres dry, 155f duty paid, and ditto (oxen dead of disease) 133f; New York salted, 63f 25c; Australia salted, 57f 50c.

Wool.—At *Havre*, in the week ending Friday, 19 bales La Plata unwashed were sold at 1f 85c to 2f 15c the kilog in bond, and 19 bales sheepskins at 70c to 1f 50c. The arrivals were not important. This week some bales of Buenos Ayres unwashed have been sold at 80c to 2f 40c, and some Peru, 1f 95c.

Tallow.—At *Havre* last week there were neither sales nor arrivals. The same has been the case this week. At *Paris*, yesterday, the average price of the 100 kilogs was 134f 75c, a decline on last week's prices.

Spirits.—At *Paris*, yesterday, 3-6 of 90 deg. was at 102f to 103f the hectolitre; Montpellier of 86 deg. at 135f. At *Bordeaux*, the day before yesterday, 3-6 Languedoc was 132f 50c, and beetroot 106f.

Turin, March 27.

The Commercial and Industrial Bank of Turin—or, to give it its French title, the Caisse du Commerce et de l'Industrie—has not prospered. At a recent meeting of the shareholders, it was resolved that the capital should be reduced from 40,000,000f to 10,000,000f, and the shares from 160,000f to 40,000f. This means that the bank has sustained enormous losses.

Berlin, March 27.

Some communications have, I believe, been entered into with the French Government for the conclusion of a treaty of commerce between France and the Zollverein; but so long as the political situation continues uncertain, they are not likely to be followed up.

Vienna, March 26.

The new loan, which you will see advertised in all the newspapers, will not, it is believed, in spite of its high interest and the other advantages in the shape of lots which are offered, obtain any great success either at home or abroad. If it should fail, it is not improbable that the Government may be obliged to have recourse to a forced contribution.

COMMERCIAL AND MISCELLANEOUS NEWS.

A commercial report from Calcutta, dated the 22nd February, says:—A general steadiness prevailed in our import market throughout the last fortnight, and gradually prices of almost all descriptions of goods have improved more or less in value as well as in demand. The consumption continues steady and regular, and if it were not for the still existing tightness of the money market, the improvement would have been more pronounced. Money has been in great demand, both for investment in Government securities and for the purposes of the up-country trade; as high as 15 per cent. was paid in the Bazaar, and the Bank rates were all advanced; since the closing of the 5½ per Cent. Loan, however, there has been greater ease in the market, and rates in the Bazaar are fully 4 per cent. lower.

The operations of the United States Branch Mint at San Francisco during the month of January, 1860, were as follows:—

Gold deposits, after melting	oz	27,318 03
Coinage—Double eagles	dols	360,000
Half dollars		38,000
Total coinage		398,000

The exports of treasure during the month of January, were 4,290,360 dols 7c; imports same time, 671,952 dols 78c.

Statement of the deposits and coinage at the United States Mint in Philadelphia, for the month of February, 1860:—

Deposits.			dols	c
Gold from all sources			1,838,578	51
Deposits and purchases of silver			23,459	36
Spanish and Mexican fractions of a dollar received in exchange for new cents			12,113	56
Total deposits			1,862,037	87
Copper cents (o.s.) received in exchange for new cents			2,875	0
Coinage.	No. Pieces.		Value. dols	c
Gold—Double eagles	81,608	.....	1,632,160	0

Silver	180,000	.....	21,600	0
Copper	2,400,000	.....	24,000	0
Total	2,661,608	.....	1,677,760	0

The recent dispute in connection with the Scotch iron and coal trades has seriously curtailed the shipments of pig iron from Scottish ports, which have been as follows during the last six weeks:—

	1860. tons.		1859. tons.
Week ending February 4	6,171	.....	6,585
— — 11	6,955	.....	9,820
— — 18	6,609	.....	7,226
— — 25	5,543	.....	8,230
— March 3	7,776	.....	12,832
— — 10	11,114	.....	12,533
— — 17	9,656	.....	14,981

The strike having terminated, shipments will no doubt now regain their former activity.

The Bankers' Gazette.

BANK RETURNS AND MONEY MARKET.

BANK OF ENGLAND.

(From the GAZETTE.)

AN ACCOUNT, pursuant to the Act 7th and 8th Victoria, cap. 32, for the week ending on Wednesday, the 28th day of March, 1860.

ISSUE DEPARTMENT.

	£		£
Notes issued	29,063,040	Government Debt	11,015,100
		Other Securities	3,459,900
		Gold Coin and Bullion	14,588,040
		Silver Bullion	...
	29,063,040		29,063,040

BANKING DEPARTMENT.

	£		£
Proprietors' Capital	14,553,000	Government Securities (including Dead Weight Annuity)	10,221,190
Rest	3,755,413	Other Securities	23,955,189
Public Deposits (including Exchequer, Savings Banks Commissioners of National Debt, and Dividend Accounts	10,384,110	Notes	8,082,685
Other Deposits	13,556,194	Gold and Silver Coin	683,661
Seven Day and other Bills	694,008		
	42,942,725		42,942,725

Dated the 29th March, 1860. M. MARSHALL, Chief Cashier.

THE OLD FORM.

The above Bank accounts would, if made out in the old form, present the following result:—

Liabilities.	£	Assets.	£
Circulation (including Bank post bills)	21,674,363	Securities	34,098,379
Public Deposits	10,384,110	Coin and Bullion	15,271,701
Private Deposits	13,556,194		
	45,614,667		49,370,080

The balance of Assets above Liabilities being 3,755,413*l*, as stated in the above account under the head REST.

FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit—

An INCREASE of Circulation of	£614,592
An INCREASE of Public Deposits of	21,567
An INCREASE of Other Deposits of	623,274
No change in the amount of Government Securities.	
An INCREASE of Other Securities of	1,379,356
A DECREASE of Bullion of	104,673
An INCREASE of Rest of	15,250
A DECREASE of Reserve of	742,298

The enormous increase in the "other" securities shows how severe was the pressure for money at the Bank. That pressure continues unabated up to the present moment. A large sum having been re-lodged, however, as "other" deposits, the decrease in the reserve does not exceed three-quarters of a million.

Subjoined is our usual weekly table, affording a comparative view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1850:—

At corresponding dates with the present week	1850.	1857.	1858.	1859.	1860.
Circulation, including bank post bills	£ 20,512,232	£ 19,753,218	£ 20,790,915	£ 21,733,073	£ 21,674,363
Public deposits	9,571,047	9,031,051	7,630,763	9,346,914	10,384,110
Other deposits	9,526,633	10,187,460	12,591,054	13,879,985	13,556,194
Government securities	14,418,854	11,646,018	9,901,993	11,708,353	10,221,190
Other securities	12,267,353	21,242,752	16,857,437	17,357,488	23,955,189
Reserve of notes & coin	11,627,035	405,689	13,153,167	13,117,250	8,766,346
Coin and bullion	17,076,935	9,987,559	18,628,917	19,630,470	15,271,701
Bank rate of discount	2½ p. c.	6½ p. c.	3 p. c.	2½ p. c.	4½ p. c.
Price of Consols	96	93⅜	96¾	95¼	94½
Average price of wheat	37s 9d	55s 6d	45s 2d	40s 0d	45s 6d
Exchange on Paris (shrt)	25 55	25 25	25 5 12½	25 5 10	25 10 15
— Amsterdam ditto	12 4	11 16	11 15 15½	11 14 14½	11 14 14½
— Hamburg (3months)	13 14	13 7½	13 6 6¼	13 5¼ 5½	13 5½ 6

At the corresponding period of the year 1850, it had been officially announced that the Pope had at last made up his mind to return to the Vatican. A good deal of attention was directed to the spread of Socialism in France, as evidenced by the recent return of three Socialist candidates for Paris. Political affairs throughout the Continent were very unsettled.

In 1857, the Bank of France were withdrawing gold from the Bank of England, whose rate of discount was, accordingly, about to be raised from 6 to 6½ per cent. The "other" securities had increased a million and a quarter within a week.

In 1858, although the effects of the commercial crisis were passing away, the continuance of failures in the India and China trades checked the revival of business. The subscription for the first five millions of Indian 4 per Cent. Debentures had just taken place, the result being the absorption of 4,800,000*l*, principally between 97 and 98½ per cent.

In 1859, the hopes of peace inspired by the announcement of a Congress had been shaken by the vast armaments of the three antagonistic Powers. The embarrassments of the Indian finances were forcing themselves painfully upon the public attention. The Russian loan of 12,000,000*l* was upon the eve of issue. One million had just been paid upon the Debentures of the East Indian Railway Company.

It will be noticed that Consols are now quoted only ½ per cent. higher than in 1857, when the Bank rate of discount was 6½ per cent.

The amount of the "other" deposits, as compared with the "other" securities, showed, in 1850, a deficiency of 2,740,720*l*; in 1857, a deficiency of 11,055,292*l*; in 1858, a deficiency of 3,866,383*l*; and in 1859, a deficiency of 3,477,503*l*. In 1860, the deficiency is 10,398,995*l*.

Yesterday (Thursday) the *minimun* rate of discount of the Bank of England was raised from 4 to 4½ per cent. The last previous alteration was on the 31st of January, when a rise from 3 to 4 per cent. was announced. The coin and bullion stood then at 14,942,502*l* (329,199*l* *less* than now); the reserve of notes and coin at 7,511,162*l* (1,255,184*l* *less* than now); and the other securities at 20,773,681*l* (3,181,508*l* *less* than now).

The announcement of the alteration at the Bank yesterday was not received without a certain feeling of surprise in some quarters. Attention had been prominently directed, however, throughout the week, to the pressure for money in commercial channels, of the severity of which the return above given furnishes abundant proof. Most of the banks and other dealers in money found their supply so far reduced that they were glad to turn away business, except, perhaps, as regards their regular customers, by demanding a considerable advance upon the Bank *minimum*. The majority of the bill-brokers were eager applicants at the Bank for the advances usual at this period of the quarter. The entire market found itself dependent upon that establishment to a degree unusual even at this season, when great power is given to it through the absorption of the currency in revenue payments. Meanwhile, the public are chiefly interested in marking the reassuring feature that the present action of the Bank is not directed against any foreign cause of disturbance. There is, therefore, no ground for anxiety. The foreign exchanges during the last two or three weeks have been firm, with a tendency to improvement, and the demand for gold for the Continent has scarcely been sufficiently active to absorb even the limited sums imported. The increased tightness and dearness of the money market here are likely to give a further turn to the exchanges in our favour. Our home legitimate commerce, which seems to have thriven even better whilst the value of money has been 4 per cent. than during the previous prevalence of very low rates of discount, will certainly not be oppressed by the additional half per cent. now charged. The demand for money would not be characterised by its present activity unless the amount of trade going forward were very large; and trade would not have acquired this remarkable development were not the profits proportionately handsome. Even the fresh rise in the value of money is, therefore, suggestive of satisfactory inferences. Provided the market does not become unsettled, no inconvenience will be occasioned; and the acknowledged absence of any foreign drain ought to obviate that contingency.

The demand for money has been quite as pressing since the rise to 4½ per cent. as before. Little business was done to-day below 4¾ per cent., and for all but the best short paper higher terms were required. The applications at the Bank, both yesterday and to-day, have been very heavy. Preparations are being made for the extensive payments on revenue account which must be effected by the bankers on the last day of the quarter. To-morrow will, therefore, be a very busy day. There is reason to hope that the worst of the quarterly pressure will then be over, although the demand in connection with the mercantile engagements maturing on the 4th of April (next Wednesday) must not be overlooked. It is already evident, however, that the relief anticipated from the payment of the dividends has been to a very considerable extent "discounted." Upon their release, the advances which have been made by the Bank during the last three weeks will fall repayable, and the supply in the outer market will be proportionately contracted. These considerations point to the continuance of a tight money market.

In the Stock Exchange to-day money was in pressing

demand, and the rate for short loans on English Government securities was 4½ to 5 per cent.

The discount establishments have announced a rise of ½ per cent. in the rates allowed for loans. They now give 3½ per cent. for money "at call," and 4 per cent. subject to seven days' notice of withdrawal. A similar movement has been notified by the joint-stock banks, which now give for deposits 3½ per cent., or 1 per cent. below the Bank minimum rate of discount. The London and Westminster Bank, however, allow only 2½ per cent. on sums below 500*l*.

In consequence of the intervention of a holiday (Good Friday) on the 6th of April, it has been arranged that the bankers shall sign their lists for the April dividend on the 5th. The dividends will therefore be payable at the Bank of England on Monday, the 9th of April.

To-day there was an exceptional withdrawal of 14,000*l* in gold from the Bank for exportation.

The Continental exchanges this afternoon have experienced a general improvement. The upward tendency was especially observable this afternoon.

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley, under date this day:—

Gold.—Further arrivals of gold from Australia have taken place since the date of our last,—viz., the Champion of the Seas, with 176,000*l*, and the Cleadon, with 68,000*l*. Both these amounts were taken for the Continent; but the demand for export not being so good, a reduction in price of ½d per oz has been effected. Other arrivals from Melbourne are now hourly expected, and we should not be surprised to see some of the gold sent into the Bank. The next overland mail from Australia is expected to announce the sailing of several vessels with gold for this country. The Africa has also brought 67,000*l* in gold from New York.

Silver.—The market for silver is rather flat, and a further reduction in price has taken place. We now quote the rate as 61⅞d per oz standard.

Mexican Dollars.—Since our last not any transactions have taken place in dollars, the market being quite bare of any supply; we quote the price as 62¾d per oz nominal.

Exchange on India has been affected by the fall in the price of silver; and we quote rates on Bombay and Calcutta for Bank drafts, 2s 0¼d, 60 days' sight; Madras, 2s; bills, with documents, 1s 11⅞d.

India Government Loan Notes are at nominal prices, owing to the pressure for money. The rise in the Bank rate from 4 to 4½ per cent. has had an unfavourable effect, and we quote them about 1 per cent. lower than at the date of our last. We call 5½ per Cents. 104, and 5 per Cents. 98, with a dull market.

The expected Victoria Government loan was announced this evening. The amount of 6 per Cent. Debentures now offered is 2,650,000*l* sterling. These debentures are of precisely the same description as those brought forward upon two former occasions. The manner of the adjudication will also be the same. Sealed tenders will be received at the London and Westminster Bank up to two o'clock on the 11th of April, when they will be publicly opened. A deposit of 5 per cent. must be previously lodged. The stipulation that "the debentures so contracted for will be deliverable to the subscribers on Monday, the 30th April next, upon payment of the balance due thereon," denotes that, as upon the former occasion, the entire amount is to be paid up at once. This stipulation will militate to some extent against the success of the operation in the present state of the money market, even after making allowance for the circumstance that the April dividends will be paid before the date fixed for the adjudication.

The scrip of the new Brazilian loan has fallen to 1 to ¾ dis.

The report of the Directors of the Grand Trunk Railway of Canada recommends the raising of a further capital to the extent of no less than 1,500,000*l* by the issue of bonds.

At the sixth ordinary meeting of the shareholders in the Chartered Bank of India, Australia, and China, held on Thursday, a half-yearly dividend, at the rate of 7 per cent. per annum, free of income tax, was declared, as recommended by the directors. The chairman (Mr T. A. Mitchell, M.P.) referred in favourable terms to this result, considering the brief existence of the Bank, and the fact that there are four rival establishments. He gave expression to the opinion of the Directors that an average dividend of 6 per cent. per annum will be maintained. As regards the East, he said he could see no limit to the field of commercial operations.

The latest prices for shares in new projects this afternoon were as follows:—Ocean Marine Insurance, 2⅞ to 3 prem; Universal Marine Insurance, ½ to ⅝ prem.; London and Provincial Marine Insurance, ⅛ to ¼ prem.; San Paulo (Brazilian) Railway, ⅜ to 5-16 dis.; Bank of Turkey, 1⅝ to 1⅜ dis.; City of London Brewery Preference, ½ to ¾ prem.; Buenos Ayres and San Fernando Railway, 2¼ to 2½ prem.; and Nerbudda Coal and Iron Mining Company, ½ to ¼ dis.

Great fluctuations have taken place on the Paris Bourse. Following upon the public warning given to the Imperial Government by Lord John Russell in the House of Commons, immense purchases of the Rentes have been made for account of various military and other special funds, and in order, it is supposed, to give a fillip to public confidence. The 3 per Cents., which closed on last Friday at 68.30, were run up this (Friday) morning to 70.70, showing a total advance of 2⅜ per cent. The relapse has been equally sudden. At the official close of the Bourse this afternoon the price was 69.30, and, after official hours, 68.85. The latest telegram reports agitation and heaviness. The Bourse has been almost solely occupied this week with the Savoy question.

The English funds have shown decided depression, under the combined influence of the French usurpation in Savoy, the agitation on the Paris Bourse, and the tightness in the money market here. This afternoon increased heaviness prevailed, and the closing quotations of Consols were the lowest of the week, being 93⅞ to 94 for money, 94 to ⅛ for the 11th of April, and 94¼ to ⅜ for the 9th of May. Compared with last Friday's prices, the fall is ¾ per cent. There have been some *bonâ fide* sales by bankers desirous of placing themselves in funds, but it must not be overlooked that Consols now carry three months' dividend. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English and foreign stocks last Friday and this day:—

British railway stocks have naturally been prejudiced by the fall in Consols, but the reduction is not general, this department retaining a good deal of steadiness, owing to the favourable traffic returns. Great Western and South-Eastern stocks have fallen 1¼ per cent., London and South-Western ¾ per cent., and Eastern Counties and Caledonian ½ per cent. On the other hand, Midland has proved very scarce, and has risen 1¾ per cent. There is also an improvement of ¾ per cent. in York and North Midland. Great Northern, Lancashire and Yorkshire, London and North-Western, and Berwick, remain stationary. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day:—

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about at par, and the short exchange on London is 25.10 per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s 10½d per ounce for standard gold, it appears that gold is nearly 3-10ths per cent. dearer in Paris than in London.

By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on London is 13.3½ per 1*l* sterling. Standard gold at the English Mint price is, therefore, about 1-10th per cent. dearer in Hamburg than in London.

The course of exchange at New York on London for bills at 60 days' sight is 108¾ to 108⅞ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is against England; but, after making allowance for charges of transport and difference of interest, the present rate leaves no profit on the transmission of gold between the two countries.

The Commercial Times.

MAILS FOR SWEDEN.—The mail steam packets under contract with the Swedish Government having recommenced their voyages between Hull and Gottenburg, mails for conveyance by these packets will be made up in London on the evening of Friday, the 30th instant, and on the evening of every subsequent Friday, until further notice. All letters and newspapers addressed to Gottenburg and Uddewalla will be forwarded by these packets, unless directed to be otherwise sent; but letters and newspapers for other parts of Sweden, intended to be transmitted by these packets, must be specially addressed "by Swedish Packet."

Imports of the week ..... 42,290 qrs.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The few samples of English wheat on offer at Mark lane, to-day, were taken off slowly, at about Monday's currency. In foreign wheat, very little business was transacted, and inferior parcels might have been purchased on easier terms. For all spring corn there was a fair demand at full quotations. The imports, this week, are very limited, viz., 430 quarters of wheat, 290 barley, 240 oats, and 70 sacks of flour.

At Liverpool, this morning, most kinds of produce commanded full prices, but the demand was by no means active.

The following report of the grain trade, at Odessa, is forwarded by Messrs Pietroni, Draper, and Co.:—

Our last monthly report from Odessa is dated the 4-16 March. There was considerable activity in the market during the first few days of February, but towards the middle and end of the month there was little doing. Wheat has been neglected, but prices are very firm. Nothing doing in barley for want of stock. A considerable demand has sprung up for linseed, but business is impossible owing to the exaggerated demands of holders. Linseed for future delivery would find buyers at 42s to 44s f.o.b., according to quality.

STOCKS at ODESSA, 1st March, 1860.

	chets		chets
Wheat	261,600	Barley	4,000
Rye	26,000	Oats	126,000
Maize	139,500	Linseed	16,700

SHIPMENTS from ODESSA.

	To United Kingdom, Feb. 1 to 29.	Total to all Parts, Jan. 1 to Feb. 29.
	chets	chets
Wheat	18,097	79,664
Maize	61,791	80,688
Rye	8,955	31,929
Barley	14,161	31,386
Oats	10,672	40,528
Linseed	9,744	19,853
Rapeseed	968	1,411

Messrs Briggs and Co., of Alexandria, writing on the 17th inst., observe:—

Receipts of grain and pulse of all descriptions continue very light. Within the last two or three days there has been some greater degree of slackness in the demand for Indian corn, with a slight fall in price, but owing to the decline in exchange, there is very little reduction in the cost, free on board. Beans are firmly held, with even some advance on previous rates. The following is the usual note of sales since our last advices, and present prices, f.o.b., viz:—Wheat, Saide, 360 quarters, 34s to 35s; beans, Saide, 1,280 quarters, 28s to 28s 6d; Indian corn, 1,900 quarters, 25s to 25s 8d; barley, 2,500 quarters, 18s 6d; lentils, 162 quarters, 26s 9d; sesame, 175 quarters, 64s to 65s 6d per quarter; cotton seed, 816 tons, 4*l* 8s to 4*l* 14s per ton. Freights may be quoted 4s 3d to 4s 6d per imperial quarter for beans to the United Kingdom for orders; other grain in proportion; direct ports, 3s 6d; grain ballasts to Liverpool, 2s. Cotton to Liverpool, 5-16ths with 5 per cent. to 11-32ds of a penny per lb.

The total sales in the Liverpool cotton market during the week show a fair business to have been transacted, but with that, there is no spirit whatever in the tone of the market. 62,000 bales have been sold, including 56,000 bales to spinners, 1,000 bales on speculation, and 5,000 bales for export. The abundant supply of the lower qualities of cotton has enabled buyers to have the advantage in these descriptions to the extent of 1-16d to ⅛d per lb; but the better kinds are without quotable change. To-day the market closes lifeless, with sales of 7,000 bales. In this market the sales are limited to 600 bales. No change in prices.

Advices from New York to the 17th instant, state that cotton was very dull, on easier terms. Midland Uplands were quoted at 11⅛c. Messrs Neill and Co state:—"The ultimate result of the crop is coming to be regarded as a settled question. We have now received so large a proportion of the whole, that public opinion has settled upon 4,500,000 as the figures likely to approximate nearest to the total. Large as such a result is, it will not yield more clean, desirable cotton than may be wanted. The proportion of low, poor staple and sandy cotton now in stock is very great, and these qualities will be the first to experience any material decline."

The cotton trade at Alexandria continues steady. Messrs Briggs and Co. observe:—

Prices of low cotton since our last have undergone some reduction, chiefly for the reason that the quality of the staple itself is falling away, as is usual at the end of the crop; and all accounts from the growing districts agree that we are at the close of the pick. 5,000 bales have been sold during the week. We quote present prices per lb f.o.b.:—Low ordinary to middling, 7.58d to 8.14d; good middling to fair, 8.42d to 8.56d; good fair to good, 9d to 9.55d; fine, 9.83d to 10.95d; Sea Island, 14.80d to 17d. Exchange weak at 96¼ piastres. Export of cotton in bales from 4th to 16th March, 1860:—Great Britain, 7,860; France, 2,035; Austria 144;—total. 10,039.

The public sales of tea, held since we last wrote, have gone off heavily at 1d to 1½d decline per lb. Privately, the demand is much restricted, and the imports have been on a liberal scale.

Advices from Hong Kong to the 16th February bring the annexed report of the tea and silk markets:—

Tea.—On the reopening of the market teamen evinced a readiness to sell, which resulted in the settlement of five chops at a reduction of 1½ to 2 taels on previous rates. Buyers, however, came into the market so freely with this inducement that prices gradually recovered their former position; 25 chops have been settled in all, including 3 chops shipped on native account. Arrivals for this season to date are 241 chops; settlements, ditto, 217 chops; leaving only 24 chops on the market. The season may now be considered as almost at an end in Canton, as only a few more chops are expected from the country. We quote ordinary to fine Monahms, 23 to 26½ taels; fair to fine Oopacks, 27½ to 33 taels; scented orange pekoe, 600 boxes fine, sold, 30 to 32 taels; scented capers, 700 boxes, low end fair quality, 15½ to 18½ taels; Canton packed congou, 700 chests and 3,350 half-chests, fair quality, 20 to 20½ taels; Pouchong congou, 2,500 half-chests, at from 19 to 21½ taels. Amoy dates are to the 8th inst., but mention no transactions in tea. Foochoo letters are to the 7th inst. Some sales were made at easier rates before the China new year, but an active business has been done since the close of the holidays, and prices are quoted as before. Supplies have been equal to the demand, but the quality is low. Settlements have been 18,000 chests. Shanghai advices are to the 6th inst. Silk.—Business was resumed on the 30th of January, and since then 2,000 bales have been settled at an advance of 10 taels per picul for Taatlee, 5 taels for Taysaam,

and 20 taels for throwns. The decrease in export is now 13,000 bales as compared with same date last year. Stocks are very small, and consist principally of inferior descriptions. We quote:—

	taels		taels
No. 1 Taatlee	...	No. 1 Taysaam	390
No. 2 Taatlee	...	No. 2 Taysaam	370
No. 3 Taatlee	420 to 425	No. 3 Taysaam	350
No. 4 Taatlee	405 to 410	No. 4 Tayaaam	335
Inferior Taatlee	375 to 400	Inferior Taysaam	320 to 330

The total export of silk from China to Europe is 48,990 bales, against 58,662 bales in 1859, or a decrease for this season of 9,672 bales. Tea.—Scarcely any transactions took place in black teas until very lately, when eight chops were settled in order to fill a chartered ship. Supplies come forward very sparingly, and of common quality. Rates are maintained. Settlements are—Ningchow and Oopack, 5,500 chests, 21 to 31 taels, duty paid; Sunchunki and Hokow, 500 chests, 18½ to 24 taels, duty paid; Pekoe, 400 chests, 40 taels, duty paid. Green teas have been in small demand, but holders are firm and decline to make any concession. About 3,000 half-chests have been taken, principally for America. Total export from China to Great Britain is 60,197,300 lbs, against, to same time last year, 39,932,500 lbs, or an increase of 20,264,800 lbs for this season. To the United States the export is 25,320,500 lbs, against 23,238,400 lbs last year, or an increase for 1859-60 of 2,082,100 lbs.

We have to report a dull market for all raw sugars, at a reduction in the quotations of 6d per cwt. In the value of refined goods no change of moment has taken place. The exports of sugar from Havana and Matanzas from the 1st January to the 7th inst. were 100,503 boxes, against 133,970 boxes in the corresponding period in 1859. Prices ruled as follows:—Brown, Nos. 7 to 10, 21s 10d to 24s 9d; yellow, 11 to 12, 25s 4d to 26s 6d; ditto, 13 to 14, 27s 1d to 27s 8d; ditto, 15 to 17, 28s 3d to 30s 7d; ditto, 18 to 20, 31s 2d to 32s 6d; white, inferior to prime, 32s 9d to 38s 6d per cwt, at the exchange of 13½ per cent. premium, f.o.b.

There has been a steady inquiry for all descriptions of coffee, and prices generally have been well supported.

Messrs A. W. Heale and Co., of Colombo, report the state of the coffee trade to the 29th February as follows:—

The weather has been favourable, and the shipments of coffee to date are as follows:—

DISTRIBUTION of COFFEE CROP EXPORTED from CEYLON, from October 1, 1859, to February 28, 1860.

	Plantation.	Native.	Total.
	cwts.	cwts.	cwts.
London	157,311	53,450	210,761
Liverpool	6,413	3,134	9,547
Amsterdam	6,265	1,947	8,212
Havre	1,053	11,388	12,441
Falmouth.....	3,204	4,415	7,619
Boston	...	2,787	2,787
Mauritius.....	...	293	293
Melbourne	6,499	200	6,699
Total	180,745	77,614	258,359

The receipts of plantation coffee in Colombo have not been as large as usual: very little has been done in the article, buyers not being disposed to give the extreme rates expected by planters. The exports of native sorts to date are below those of last year: there are, however, some large parcels waiting shipment in Colombo godowns, mostly for foreign orders. The arrivals during the fortnight have been moderate, and the dealings far from considerable. Prices have been about maintained at our last quotations. Plantation coffee, low grown, 65s 9d; mountain, 68s 1d per cwt. Native coffee, well-picked and dried, 51s 9d per cwt.

The rice market has continued very active at a further improvement in the quotations of 3d per cwt. The stock is now much reduced when compared with last year.

An advance of fully 1s per cwt has taken place in the value of saltpetre, at which importers are very firm.

The fruit market has been in a most inactive state; nevertheless, prices have been supported.

Rum has commanded rather more attention during the last two or three days. Brandy, however, has sold heavily.

We have no new feature to notice in the wool trade. The transactions continue on a limited scale, yet the value of foreign and colonial qualities is well supported. The hemp market has ruled firm, and Petersburg clean has sold at 29*l* 10s to 30*l* per ton. Flax has commanded previous rates.

Scotch pig iron has sold slowly, at 55s 9d cash mixed numbers. English copper has fallen 4*l* 10s per ton. Manufactured parcels and yellow metal have declined ½d per lb. Other metals have sold slowly.

Linseed oil has sold to a fair extent at 28*l* to 28*l* 5s per ton on the spot. Other oils have ruled about stationary.

The tallow market continues dull. Most of the parcels offered at public sale have been withdrawn from want of buyers, and the price of P.Y.C. on the spot to-day is 57s 6d. Town tallow has sold at 55s net cash.

"The unpropitiousness of the weather," says the New York *Shipping List* of the 14th inst., "and the various auction sales of foreign goods, have interfered with the market for domestic goods, and diverted attention from the regular business. The opening sales were unusually attractive, but transactions were at ruinously low prices, nevertheless, which caused something of a panic among holders, and had the effect to stimulate them to increased exertions to sell superfluous goods as fast as possible, even at the very low prevailing prices. The sales more recently have been at somewhat less unfavourable results. It is pretty generally conceded that stocks of woollen goods are larger, both at the seaboard and in the interior, than has been supposed, and the market is much depressed in consequence, and only small sales are making at merely nominal rates."

The cotton market has again been depressed this week, and increasingly so towards the close. A fair amount of business has, however, been done by the trade as well as for export. The supply of cotton offering is at the moment excessive, and though in the better grades of American there is little change, yet, in the qualities below middling, sales have been made at irregular prices, and in some cases ⅛d to ¼d per lb below last week's quotations. Egyptian are decidedly less saleable, and do not realise the recent highest prices by ¼d to ⅜d per lb. Brazil are nominally without change. East India very heavy of sale, especially in the inferior grades. The sales to-day will scarcely exceed 7,000 bales. The market is heavy. The reported export amounts to 4,890 bales, consisting of 1,590 American, 40 Brazil, and 3,260 East India. No business will be transacted in the cotton market on the 7th proximo.

MARKETS IN THE MANUFACTURING DISTRICTS.

Although the amount of business doing in the manufacturing district, this week, for India and China, has been only moderata, trade, generally is still in a healthy state. On continental account, the transactions have continued somewhat restricted; but those for home use and consumption have been on a liberal scale. Raw material is still selling at very high prices, and there is no accumulation of stock of manufactured goods in the warehouses. Machinery is well employed in the whole of our districts. The iron trade has become much less active; but the demand for coals continues steady.

MANCHESTER, March 29.—On Monday, this market commenced with considerable preparation for business, and a brisk tone with some expectation of higher prices was manifest. But on Tuesday political considerations interfered, and the larger buyers withdrew. There has, however, been daily through the week a steady demand at full rates, and sellers who could deliver in reasonable time have kept adding to orders. To-day the market closes flatter on the advancement of the Bank minimum. Though few sellers are not deeply laid in with contracts, the slowness with which these come round are matter of common complaint, the irregularity and diminution of work amongst the operatives increasing with the increase of machinery. The home trade in our manufactures has been again rather backward, the weather being against it.

HUDDERSFIELD.—Wool and piece-dyed black doeskins, at and about 4s per yard, are much in demand, and large quantities are being delivered to order weekly. For medium-priced fancy goods in crapes, twists, and mixtures, there is a steady demand. The local wool trade has been very brisk. ——LEEDS.—Inquiry is active for light articles and cotton warps, and rifle cloths yet continue to be required in fair proportion. Rates are without change. A few plain cloths are also moving.——BRADFORD — Great quietness prevails in the wool trade; in fact, there is scarcely anything doing. Prices keep very firm, and show no signs of relaxing. In noils and shorts there is no change to notice. There is no improvement in the yarn trade. The export houses are very limited in their operations. Prices rule too high for more extended purchases. The export houses are doing a fair but not large business. The somewhat uncertain aspect of continental affairs is not without its effect on the merchants, who hope, by deferring their purchases, after a while to obtain them upon more favourable terms.——HALIFAX.—The worsted trade has been rather quiet. The manufacturers, however, are steadily employed, and the condition and prospects of the trade generally are good. The yarn department is active, the home demand being quite equal to an average for the season, and there being more inquiries for the export trade. Upon the whole, the carpet trade is moderately active, though in one or two branches there is a little slackness. Wools remain very firm in price, but the local brokers have not effected many sales during the week.— ROCHDALE.—Wool—Although in most of our warehouses there is a moderate supply of the different sorts required for this district, we have but little doing except for the supply of immediate wants. Prices are much the same as last week. Flannel—There is more doing than last week. The stocks both of Lancashire, Welsh, and Saxony flannels are by no means large, and looking at the season and the general feeling in the trade, there does not appear to be any other chance for merchants than to submit to give advanced prices. The Yorkshire trade is much the same as before quoted, but for scourers there is a demand which exceeds the supply.—— LEICESTER.—There is a fair amount of business doing in several departments of the hosiery trade. All branches are in a healthy state, and the workpeople in both Leicester and the neighbourhood are well employed. The wool market is firm, and high prices are yet obtained. In yarns there is very little change, spinners being fairly employed.——NOTTINGHAM.—The lace trade continues in a very inactive condition. The hosiery trade is less active this week; genial weather will, however, revive this department of our staple trade. Stocks on hand are low, and manufacturers are just now very careful how they increase their goods.—BELFAST.—Large supplies of yarn have changed hands at full prices. Manufactured goods continue in steady request, at extreme rates.——DUNDEE.—The market is healthy, but the business doing is not extensive.——BIRMINGHAM.—The accounts in reference to the condition of trade in this town are less satisfactory than they have been for some time. Very few orders have come in. At present, however, the manufacturers continue to work full time. There is no improvement to notice in the iron trade; the demand is still confined to the best brands of finished iron, for which there is no departure from quarter-day prices. The preliminary meeting of the iron-masters of South Staffordshire and East Worcestershire was held on Thursday. After a very brief discussion it was resolved to adhere to the prices of last quarter-day for all descriptions of finished iron. Common Staffordshire bars, 7*l* 10s, at the works; best bars, 8*l* 10s; sheets, 9*l*; doubles, 10*l* 10s; nail sheets, 8*l* 10s; latins, 12*l*; boiler plates, 9*l*; best and best best in proportion; common rods, 7*l* 10s; hoops, 8*l* 10s; gas strip, 8*l*; Canada plates, 12*l*.——WOLVERHAMPTON.—Current prices of pig iron:—Staffordshire cold blast, 4*l* 10s; best native hydrate pigs, 3*l* 15s to 4*l* 2s 6d; first-class all mine grey forge pigs, 3*l* 10s to 3*l* 15s; good mine pigs, with a modicum of flue cinder, 3*l* to 3*l* 5s; mine pigs, deteriorated by cinder, 2*l* 15s to 3*l* 2s 6d; grey forge cinder pig iron, 2*l* 15s to 2*l* 17s 6d; white forge cinder pigs, 2*l* 10s to 2*l* 15s; melters, Nos. 1, 2, and 3, 2*l* 17s 6d to 3*l* 2s 6d; superior makes of all mine melting iron, 3*l* 10s to 4*l*, according to make and quality. Favourite Shropshire and Forest of Dean brands, 4*l* 10s.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, March 14.—FLOUR AND MEAL—There continues a fair degree of animation in the market for State and Western flour, mainly for the home trade, but some little speculative feeling has been manifested during a part of the time, though transactions for that purpose have been moderate. The increased activity led to a further advance of 5c to 10c per bbl, which has tended to restrict operations somewhat. The sales for the three days aggregate 28,000 bbls. Canada flour is in limited supply and good demand at previous prices, with sales of 850 bbls, including 200 yesterday. The advanced pretensions of holders has retarded operations in Southern flour, and transactions are restricted to 6,700 bbls for the three days, at about 10c to 25c per bbl above our previously quoted rates. Export of wheat flour from 1st to 13th March 21,907 bbls, against 20,241 bbls in 1859.

GRAIN.—The demand for wheat has been somewhat less active during the past three days. The recent rapid advance caused buyers to withdraw from the market altogether, or purchase as sparingly as possible, and only to supply their most pressing wants. The sales aggregate 26,700 bushels. The market for corn is somewhat irregular, and prices are nominally about one cent per bushel lower; the sales are 61,000 bushels, closing dull and drooping at 77c to 80c for white Southern, 78c to 80c for round white, and 76c to 77c for mixed Western. Export from 1st to 13th March: wheat, 8,747 bushels, against 600 bushels in 1859; corn, 16,069 bushels, against 3,661 bushels in 1859.

EXPORT OF BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND, since September 1. 1859.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING.

As much of the farmers' time is now occupied in superintending field labours, very limited supplies of home-grown wheat have made their appearance, both here and in the leading provincial markets during the present week. The deficiency in the arrivals, added to the unfavourable accounts from several districts in reference to the appearance of the winter wheats, and the great falling off in the importations from abroad, have produced more firmness in the demand for both red and white qualities, and prices have further advanced from 1s to 2s per quarter. Foreign wheat has commanded more attention, and the currencies have improved 2s per quarter. In many instances, holders have withdrawn their samples, under the impression that prices will go higher. As we intimated last week, there is every prospect of further enhanced rates, since from no quarter are we likely to import largely for some time. Bearing upon the question of supply from America, we direct attention to the following remarks from the United States *Economist*:—"The cause for the remarkable decline in grain and flour exports is attributable to the absence of an active demand from abroad. The British market has been supplied with a fair home crop, and its deficiences have been made up to a large extent by imports from European countries, thus leaving our own produce to the chances of speculative shipment, which, depressed as our great grain-growing section has been, have not been sufficient to induce any extensive consignments. The yield of the last crop was but little under an average, and there must, therefore, be a considerable proportion of the season's produce still in the hands of the farmers and the grain merchants, waiting for more favourable chances of export. The anticipations of an extensive export have been disappointed, and those who based thereon an expectation of a revival of the Western trade this spring have found their calculations mistaken. Whilst the action of the grain holders in keeping their produce out of the market has tended to check the immediate recovery of the West, it yet shows favourably, that they should be able to hold their stock, instead of forcing it upon the market at depreciating prices. It is to be remembered, however, in comparing the movements of the present year with those of 1856-7 and 1857-8, that those years were quite exceptional in the history of the

trade, the exports being for the former 55,624,832 dols, and for the latter 33,698,490 dols. The lower aggregate value of 1857-8 was caused not so much by the export of a less quantity of produce, as by the lower prices ruling during that period—the average price of wheat flour during 1856-7 was 6.23 dols, whilst during 1857-8 it was only 4.73 dols—a decrease on the former year of about 33 per cent. Making, however, all allowance for this circumstance, there is every prospect that the export of breadstuffs for the current year will fall below an average, and that at the close of the grain year there will be a large amount of produce in the hands of the Western dealers."

The spring corn trade has ruled healthy, and very high rates have been paid for barley fit for seed and malting purposes. The supplies brought forward have not increased. Second qualities of flour have somewhat advanced in price.

Throughout the Continent, wheat has produced more money, and other articles have sold at extreme rates. Rather large quantities of grain have been disposed of for shipment to England in the spring.

In Scotland, wheat has produced rather more money. Barley and other articles have commanded extreme rates. Steady shipments continue to be made to the South.

At length, some improvement has taken place in the grain trade in Ireland. Both wheat and maize have ruled higher in price; but the transactions in other articles have been somewhat restricted.

Very little English wheat was on offer here to-day. The demand, however, was less active, at about Monday's currency. Foreign wheat was dull, and rather lower to purchase. Spring corn, however, moved off steadily, at very full prices. Flour ruled steady.

Mr Ed. Rainford states that 14 vessels have arrived off coast laden with grain since the 21st inst., and that a moderate business has been passing in floating cargoes at full quotations.

The London averages announced this day were:—

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

FOR REPORT OF THIS DAY'S MARKETS, SEE "POSTSCRIPT."

MINCING LANE, FRIDAY MORNING.

SUGAR.—There has been an entire absence of buoyancy in the market throughout this week, and prices have occasionally receded 6d, notwithstanding the comparatively moderate supplies brought forward. The stock is still rather above the average of three previous years, while liberal arrivals may shortly be expected, but the home deliveries keep steady. Only 1,090 hhds West India had changed hands to yesterday. 152 casks crystallised Demerara, by auction, went at 41s 6d to 45s 6d per cwt. The week's delivery was 3,875 tons, and the landings amounted to 3,200 tons. The stock is 48,700 tons, against 45,720 tons in 1859 at the same period.

Mauritius.—3,120 bags offered on Tuesday, about half found buyers at barely the former value in some cases: brown dark to middling, 31s 6d to 35s 6d; grainy yellow, 40s to 42s 6d; crystallised fine yellow, 45s to 46s per cwt. Several parcels held on French account were withdrawn above the value.

Bengal.—Business has been done in low brown date Bengal privately at 31s, and 822 bags offered in public sale were chiefly taken in at 30s to 31s 6d per cwt for very low quality.

Madras.—3,990 bags sold at easier rates in many instances. Native brown and yellow, 32s to 38s; soft pasty grey and Jaggery, 30s to 32s per cwt.

Penang.—1,960 bags went at 40s to 44s 6d for low to fine yellow, with fair brown at 38s to 38s 6d per cwt.

Foreign.—11,260 bags clayed Manilla partly sold at 38s 6d to 39s. 1,200 boxes Havana were bought in at 39s 6d to 43s for soft brown to middling yellow. 242 casks muscovado, of indirect import, partially met with purchasers at 39s to 44s; and 259 casks Cuba at 39s to 42s 6d. 950 bags soft Brazil kind from Havre were chiefly taken in at 38s to 38s 6d for brown and low yellow. 223 cases Bahia were bought in above the value. 1,700 bags washed Manilla sold privately at 38s. A small parcel of unclayed brought 32s 3d. 570 boxes Havana, No. 12, 29s 3d; and 128 hhds muscovado, at 26s 3d, being a cargo for the Clyde.

Refined.—There has not been much animation in the market, but general quotations remain unchanged. Common goods this morning are worth 51s 6d per cwt. Crushed and pieces exhibit little alteration.

MOLASSES.—Low qualities continue in demand. Further business is reported in old clayed Cuba at 14s per cwt. West India remain firm.

RUM.—The market has been firm, although not very active. A considerable quantity of common Penang is reported at 1s 7d. A few transactions have occurred in West India: Leewards at 1s 8d to 1s 10d; current to good quality of Demerara at 2s to 2s 2d per proof gallon.

COFFEE.—A firm tone prevails in this market, and no public sales of plantation Ceylon were held until yesterday, when 340 casks 133 barrels and bags, found buyers at 69s to 79s for fine fine ordinary to good middling bold. 173 casks 210 bags native realised 60s to 63s for ordinary to good quality. Several contracts have been made privately. 1,512 bags Bahia realised 57s to 63s. A cargo of St Domingo has been sold at 64s for the Mediterranean.

COCOA.—64 bags Trinidad partly sold from 93s to 96s for middling to good. 90 bags Grenada went at 64s to 68s 6d. 95 bags St Lucia, 62s to 66s. 1,011 bags Bahia were partly sold at 52s. 200 bags Guayaquil, of indirect import, were taken in at 75s per cwt.

TEA.—The market has been exceedingly dull, and some kinds have sold by private contract at lower rates. At the public sales, yesterday, 11,600 packages were submitted, when 9,834 packages sold at 1d to 1½d per lb decline, the bulk being offered without reserve.

RICE.—The demand continues extremely active, especially for soft grain descriptions, which are again rather dearer, four floating cargoes of Necrancie Arracan being sold up to yesterday afternoon at 10s 6d. On the spot, numerous transactions have taken place, including Rangoon and Moulmein, at 8s 3d to 10s; pinky Madras, 9s 7½d to 10s; fine white Bengal, 13s 4½d to 14s 6d; low broken to good, 9s 3d to 13s 3d; Necrancie Arracan, 10s 6d. 4,285 bags Bengal, by auction, found buyers at 10s 9d to 11s 9d for low middling to middling white, and 10s 3d per cwt for Moonghy.

IMPORTS and DELIVERIES of RICE to March 24, with STOCK on hand.

Stock	60900	80750	77350	44450

SALTPETRE.—The market has been active at an advance of quite 1s since last Friday. Latest transactions included Bengal, 5¼ to 4 per cent. refraction, at 44s to 45s; 14½ to 6¼, 39s 6d to 43s 6d. 5,000 bags have been sold at 43s 6d to 44s 6d to arrive and in course of landing.

IMPORTS and DELIVERIES of SALTPETRE to March 24, with STOCK on hand.

NITRATE OF SODA.—The sound portion of 1,390 bags was sold at 16s 6d, refraction 4½; washed and loose at 12s to 14s per cwt.

METALS.—Several descriptions have tended downwards in price this week. British copper is ½d per lb lower for sheets, and 4*l* 10s per ton for other kinds. Scotch pig iron has been unsettled, and on Wednesday declined to 56s 3d. This morning the quotation is 55s 3d per ton. Spelter remains very quiet. The nominal quotation on the spot may be considered 20*l* 12s 6d to 20*l* 15s per ton. Foreign tin, although quiet, is firm: Banca, 139s; Straits, 131s to 132s per cwt.

HEMP.—Russian continues very firm. Clean Petersburg is now quoted 29*l* 10s to 30*l*. 2,300 bales Manilla offered by auction were taken in at 25*l* to 26*l*. 2,770 bales jute were about half sold at the former value: common to fine, 13*l* 17s 6d to 17*l* 2s 6d per ton. Privately, little inquiry prevails.

LINSEED.—With large arrivals, there has been diminished buoyancy in the market.

OILS.—All kinds of fish are firm. Sperm cannot be obtained under 100*l* per tun. Olive in limited demand on the spot, but several cargoes of Gallipoli have sold at 58*l* to 59*l* 5s per tun. The market for palm is steady at 46s. Cocoa-nut remains dull: Ceylon, 41s 6d to 42s; Cochin, 44s to 45s per cwt. Linseed meets a steady demand at 28s on the spot, and 29s to 29s 6d for forward delivery. Rape in moderate demand; foreign refined, 41s 6d to 42s; for delivery in the last six months of the year, 45s 6d; brown, on the spot, 40s 6d per cwt.

TURPENTINE.—900 barrels rough have sold at 9s 1½d. Spirits have been dull: American, 35s to 35s 6d per cwt.

TALLOW.—There has been a quiet market throughout the week, and prices of foreign are lower in nearly all positions. To effect large sales some further reduction would have to be accepted, as consumers seem determined not to buy much beyond their actual requirements. This morning, first sort Petersburg Y.C. is quoted 57s 3d; April to June, 55s, and 52s 6d per cwt for the last three months.

PARTICULARS OF TALLOW.—Monday, March 26.

POSTSCRIPT. Friday Evening.

Sugar.—The public sales to-day went off at easier rates in some instances for 1,004 bags Mauritius, 1,660 bags Madras, and 700 bags Bengal. Of 404 casks Barbadoes, only a small portion sold at previous rates. The week's business in West India has been 1,089 casks. 364 casks Porto Rico partly sold at 36s 6d to 47s per cwt.

Coffee.—425 casks 325 barrels and bags plantation Ceylon went at full prices: low middling to good, 70s to 82s 6d. 52 casks 1,424 bags native sold at 60s to 64s. 86 bales 14 half-bales Mocha were bought in at 90s to 92s for Alexandria.

Cocoa.—239 bags Grenada cocoa sold steadily at 64s to 74s per cwt.

Rice.—12,000 bags sold privately: Rangoon, low weevily, 8s 1½d to 8s 3d; white Bengal, 12s 6d to 13s 6d. By auction, 5,700 bags good old Rangoon were bought in at 9s 6d per cwt.

Sago.—1,541 boxes went at 16s 6d to 18s 6d for small, 16s 6d to 17s 6d per cwt for bold grain, and a great deal sold. 300 bags sago flour were taken in at 15s 6d to 16s per cwt.

Saltpetre.—Two lots of Bengal refraction 10¼, have sold at 41s 6d per cwt.

Spices.—22 cases brown nutmegs and 6 cases mace went at previous rates. 203 bags fair Singapore white pepper went at 6¾d, being rather cheaper. 500 bags black pepper were bought in: Singapore, 4d to 4½d; fair half-heavy Malabar, 4¾d per lb. 709 bags East India ginger were taken in; Bengal, 25s to 25s 6d; and Malabar at 34s per cwt.

Shellac.—Native orange sold at 9*l* 2s 6d to 9*l* 5s; button sorts, 8*l* 7s 6d to 9*l* 15s per cwt.

Oils.—53 tuns colonial sperm sold at 100*l* per tun.

Tallow.—Town was reduced 1s 6d, viz., 56s 6d per cwt.

ADDITIONAL NOTICES.

Refined Sugar.—The home market for refined sugar has been very quiet this week; prices in favour of the buyers. Nothing worth noting for export. Some few sales of Dutch crushed have been made this week at rather lower prices, f. o. b. in Holland: V O at 32s 7d; and B & H, No. 1, 32s 9d in barrels.

Green Fruit.—A fair business doing, but cold weather checks any advance in the prices of oranges, some cargoes of which, sold by Keeling and Hunt at public sale, went at similar prices obtained last week. Lemons without alteration. Nuts of all kinds in better demand, the reduction in price leading to operations.

Dry Fruit.—The fruit market continues in a quiet state, and little business doing in any article, as holders are unwilling to accept the low prices offered by the trade for anything of decent quality. Clearances large.

English Wool.—The market is quiet, and prices rule firm.

Colonial and Foreign Wool.—The market remains firm but quiet.

Flax unaltered.

Hemp.—Market firm, and but few sellers under the highest quotations.

Cotton.—Sales of cotton wool from Friday, 23rd March, to Thursday, 29th, inclusive:—300 bales Surat, at 4¾d to 5¼d for middling fair to good fair; 300 bales Madras, at 5¼d for fully good fair Tinnivelley. Since my last cotton report of the 9th instant the market has been dull, and until this week there have been no reported sales. The demand is still limited, and the transactions small; prices of the better qualities are unchanged, but the lower descriptions of Surat are difficult to sell, and are nominally ¼d per lb lower during the last three weeks. 300 bales Surat are advertised for public sale on Thursday, 5th proximo.

Silk.—The silk market continues quiet: prices unaltered.

Tobacco.—Business in some descriptions has been more active, holders having shown more willingness to meet the views of buyers, concessions on home trade leaf and strips being submitted to. Sales were effected of parcels to some extent.

Leather and Hides.—During the past week the demand for leather has rather increased, and may be said to have kept pace with the supply. At Leadenhall, on Tuesday, however, there was not much animation. Heavy sole leather is still in limited request. Nearly all other descriptions of goods meet a moderate inquiry, with very little change in prices. The public sales of raw goods last week went off briskly. The salted B. A. hides, an inferior lot, were not sold. The 5,658 dry River Plate hides found buyers at 11⅜d to 13⅜d. 517 only of the dry Rio Grande hides were sold: seconds, 18½ lbs, at 10¾d. 1,050 dry West Coast hides brought 10¼d to 11⅜d. 1,103 salted Australian hides, Sydney, best heavy, 6¾d to 6½d; seconds and light, 4¾d to 5¼d. 671 West India salted best heavy, 8¼d. The whole of the Cape hides realised previous rates. The salted River Plate horse hides were all sold: 2,482 Buenos Ayres, at 12s 6d; 5,037 Monte Video, 12s to 12s 4d. 117,000 of the 185,000 E I. kips offered found buyers, without much demand for exportation, former prices being barely supported. The Petersburg kips were not sold.

Metals.—A dull market still prevails for most kinds of metals. Copper was reduced in price again on the 26th inst. to our quotations, at which there is some little business doing. In foreign descriptions there is a disposition to hold for a return to better prices. Iron is flat for all descriptions, but at the preliminary meeting of Ironmasters in Staffordshire, held this week, it was resolved to maintain present quotations. Scotch pig is depressed to 55s cash. Tin keeps steady, but perhaps hardly so firm for foreign. Lead is quiet, but firm in prices. Spelter is flat, and a trifle easier to buy. Tin plates in moderate inquiry only.

Tallow.—Official market letter issued this evening:—

	s	d
Town tallow	6	6
Fat by ditto	2	1½
Yellow Russian	58	6
Melted stuff	41	0
Rough ditto	24	0
Greaves	10	0
Good dregs	7	0

Imports this week 32 casks.

METROPOLITAN CATTLE MARKET.

Thursday, March 29.—About an average supply of beasts were on sale here, to-day, in but middling condition. All kinds moved off slowly; but, compared with Monday, no change took place in the quotations. The show of sheep was only moderate. The best Downs and half-breds realised full currencies. Otherwise, the mutton trade ruled somewhat heavy on former terms. Lambs sold briskly at an improvement in value of 4d per 8 lbs. The supply was rather limited, and only 120 head came to hand from the Isle of Wight.

Per 8 lbs to sink the offal.

	s	d	s	d		s	d	s	d
Coarse and inferior beasts	3	4	3	6	Prime Southdown sheep	5	6	5	8

Lambs, 6s 0d to 7s 0d.

Total supply—Beasts, 942; sheep, 3,920; calves, 140; pigs, 280.
Foreign supply—Beasts, 90; sheep, 612; calves, 80.

HOP MARKET.

Borough, Monday, March 26.—We have no change to report in our market, which continues inactive. Mid and East Kents, 84s, 112s, 147s; Weald of Kents, 65s, 76s, 84s; Sussex, 65s, 74s, 80s.

Friday, March 30.—The trade was steady, at full prices.

POTATO MARKET.

Southwark Waterside, Monday, March 26.—During the past week the arrivals have been large, and, with the exception of top samples, less money had to be submitted to. The following are this day's quotations:—York Regents, 90s to 140s; Lincolnshire ditto, 80s to 95s; Dunbar ditto, 100s to 120s; Perth, Forfar, and Fifeshire Regents, 80s to 100s; ditto Rocks and reds, 75s to 85s; French whites, 70s to 80s; Belgian ditto, 60s to 70s per ton.

Thursday, March 29.—The arrivals of home produce have again been moderate at this market since our last report, and trade tolerably good, at fully previous rates:—York Regents, from 160s to 180s; ditto Flukes, 140s to 150s; Kent and Essex ditto, 80s to 120s; Scotch ditto, 100s to 120s; ditto Cups, 90s to 100s; Dunbars, 100s to 105s per ton.

HAY MARKETS.—Thursday.

Smithfield.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* 0s to 5*l* 10s; and straw, 1*l* 9s to 1*l* 14s per load. Trade firm. Supplies only moderate.

Cumberland.—Meadow hay, 3*l* 3s to 4*l* 15s; clover, 4*l* 0s to 5*l* 10s; and straw, 1*l* 10s to 1*l* 15s per load. A steady trade.

Whitechapel.—Meadow hay, 3*l* to 4*l* 15s; clover, 4*l* 0s to 5*l* 15s; and straw, 1*l* 9s to 1*l* 16s per load. A steady demand.

LIVERPOOL MARKETS.

WOOL.

(From our own Correspondent.)

Friday, March 30.—Our market continues to exhibit a very healthy tone, and although the transactions are on a moderate scale only, prices are very firm, as stocks of all useful kinds are but light.

CORN.

(From our own Correspondent.)

Friday, March 30.—The grain market very firm, at the full advance; but the high prices check business. Wheat in fair speculative and consumptive demand. Flour firm, but quiet. Indian corn and beans held for full rates, without buyers. Oats, oatmeal, and barley unchanged.

METALS.

(From our own Correspondent.)

Friday, March 30.—There has been a very quiet market for manufactured iron throughout the past week, but without change to note in prices. The business in Scotch pig iron has been only to a very moderate extent, at rates more in favour of buyers. Copper has this week again been reduced 4*l* 10s per ton for unmanufactured, and ½d per lb on manufactured copper. The lead market inactive, as also spelter, and tin plates quiet.

The Gazette.

Tuesday, March 27.

BANKRUPTCY ANNULLED.

P. Andrew, Swansea, brewer.

BANKRUPTS.

T. A. Freeth, Edward street, Hampstead road, piano forte manufacturer.
R. Tanner, Stratford, Essex, teadealer.

EPITOME OF RAILWAY NEWS.

TRAFFIC RECEIPTS.—The traffic returns of railways in the United Kingdom for the week ending March 17 amounted to 457,980*l*, and for the corresponding week of 1859 to 416,120*l*, showing an increase of 41,860*l*. The gross receipts of the eight railways having their termini in the metropolis amounted to 190,955*l*, and for the corresponding week of last year to 176,593*l*, showing an increase of 14,362*l*.

GRAND TRUNK OF CANADA.—The London directors of this company, in their report, congratulate the proprietors on the completion of the company's works, and on the final settlement of the accounts with the English and Canadian contractors. The total amount expended was 13,675,908*l*. The accounts for the half-year ending the 31st of December, 1859, showed that the net revenue for the half-year was 52,490*l*, being 31,812*l* in excess of that for the corresponding half-year of 1858.

PUNJAUB.—The directors in their report state that the earthworks of the section between Lahore and Umritsr, 32 miles in length, had been finished in a satisfactory manner by the native contractors, for the small sum of 150*l* per mile. The permanent way necessary for this section had been placed along the line, the rolling stock had left England in January last, so that there appeared every reason to believe that the two capitals of the Punjaub would be placed in railway communication before the end of the current year.

CAPE TOWN.—The directors state in their report that much progress had been made in the earthworks on the line and in the shipments of materials. The greater portion of the rails and sleepers were now on the ground between Cape Town and Stellenbosch. The direction of the extension line into Cape Town and the position of the terminus there had also been decided. Four powerful locomotives had been despatched to the colony, and one moiety of the carriages and other rolling stock was now in course of shipment, so as to provide for the opening of the first section of the line with as little delay as possible, whereby a considerable impetus would be given to the undertaking.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, March, 26.—The railway market presented a very firm appearance, and closed steadily at a further advance. Foreign descriptions were steady. Bahia were last quoted ¼ dis. to par, and San Paulo ⅜ to ½ dis. The shares of the Illinois Central and New York and Erie again improved. Mines were in rather better demand, but occasionally exhibited a reduction. In joint stock banks there was an advance in London and Westminster, and a fall in Australasia. Canada land shares were also lower.

TUESDAY, March 27.—There was a very unfavourable feeling in the railway share market, and a general decline took place, the quotations made being unusually wide. Later in the day, however, a rally occurred, but the final prices were still mostly below those of yesterday. Indian and Canadian descriptions also receded, Grand Trunk especially falling more than 1 per cent. to 34½ to 35. In the foreign market, the less important railways were chiefly affected; of the heavier shares, Lombardo-Venetian and Paris and Lyons declined at the commencement, but afterwards improved, and closed fully as high as yesterday. In American securities the bonds of the New York Central were firmer. No general change occurred in mines. Bank shares were rather dull, except London and Westminster, which again advanced.

WEDNESDAY, March 28.—In the railway market there was little general business done, and, after a few fluctuations, British stocks closed at a further decline of ¼ to ⅜ per cent. Indian and Canadian descriptions were flat, while in the foreign market prices were generally unchanged. Buenos Ayres shares, however, advanced. Bahia were last quoted ¼ dis. to par, and San Paulo ⅜ to ½ dis. In American securities the shares of the New York and Erie were lower. Mines were dull, and showed an occasional reduction. Joint stock banks were also less steady. No change of importance took place in the miscellaneous market.

THURSDAY, March 29.—The railway market to-day was depressed, owing to the advance in the Bank rate and from the prospect of an increased value of money, and the closing of some speculative accounts for the rise. There was no supply of stock of any moment, and one or two descriptions, especially Midland, continued scarce. Apart from speculative operations, the leading features remained unchanged. The improving traffic, activity in trade, and better management of the principal lines stimulated investments in railway securities. The final quotations were, however, generally lower than yesterday, notwithstanding they were for the new account in April. In miscellaneous descriptions there was a decline in Canada Land, Madras Irrigation, and Red Sea Telegraph. The new Canadian loan left off 1½ to ¾ pm. scrip, and 100½ to ¾ bonds; Victoria debentures, new, 110¾ to 111½, being ¼ per cent. lower; Ocean Marine Insurance, 3 to ¼ pm.

FRIDAY, March 30.—Business in the railway share market was active, but prices showed a heavy tone. The foreign lines were dull. In the colonial market, East Indian and Great Indian Peninsula improved.

The Economist's Railway and Mining Share List.

LD INDIA RUBBER OVERSHOES,
Tubing, Packing, Valves, &c., purchased by E. A. STEVENS and CO., Moor lane, Fore street, London, E.C. Agents appointed for large towns.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
IGHT-BROWN COD LIVER OIL,
administered with the greatest success in cases of CONSUMPTION, BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS.

Extensive experience, and the recorded testimony of numberless eminent medical practitioners prove that a half-pint of DR DE JONGH'S Oil is equal in remedial effects to a quart of any other kind. Hence as it is incomparably the best, so it is likewise far the cheapest.
Palatableness, speedy efficacy, safety, and economy unitedly recomend this unrivalled preparation to invalids.

Opinion of A. B. GRANVILLE, Esq., M.D., L.R.C.P., F.R.S., Author of "The Spas of Germany," "On Sudden Death," &c.
"Dr Granville has found that DR DE JONGH'S Cod Liver Oil produces the desired effect in a shorter time than others, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Newfoundland Oils. The Oil being, moreover, much more palatable, Dr Granville's patients have themselves expressed a preference for Dr De Jongh's Light Brown Cod Liver Oil."

SOLD ONLY in IMPERIAL Half-pints, 2s 6d; Pints, 4d; Quarts, 9s, capsuled, and labelled with DR DE JONGH'S stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable chemists.
SOLE CONSIGNEES.
ANSAR, HARFORD, and CO. 77 STRAND, LONDON, W.C

RUPTURES.—BY ROYAL LETTERS PATENT
WHITE'S MOC-MAIN LEVER
TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn round the body while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.
Mr WHITE, 228 Piccadilly London.
Price of a single Truss 16s, 21s, 26s 6d and 31s 6d; postage, 1s. Double ditto, 31s 6d, 42s, and 52s 6d; postage, 1s 8d. Post-office orders to be made payable to Mr White, Post-office, Piccadilly.

ELASTIC STOCKINGS KNEE CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c.
They are porous, light of texture, and inexpensive, and are drawn on like an ordinary stocking. Price from 4s 6d to 16s each; postage, 6d.
WHITE, MANUFACTURER, 228 Piccadilly, London

NO MORE MEDICINE.—
For Habitual Constipation, Indigestion (Dyspepsia), Diarrhœa, Nervous, Bilious, and Liver Complaints.
DR BARRY'S delicious Health-restoring REVALENTA ARABICA FOOD.—Certificate No. 36,418. "In our practice we have been enabled to appreciate the virtues of Du Barry's Food. In its effect on chronic Dyspepsia (indigestion), Nervousness, Constipation, Diarrhœa, Bilious and Liver Complaints, Cough, Asthma, Debility and Incipient Consumption, we find it the safest remedy. (Signed) Ure, M.D., F.R.S.; Dr Harvey; Dr Bright, Dr Sheridan; Dr Campbell.
"At a cost of about a penny per meal, it speedily cures constipation, dyspepsia (indigestion), nervousness, flatulency, distension, phlegm, biliousness, liver complaints, hysteria, neuralgia, sleeplessness, acidity, congestion, blood to the head, headaches, loss of memory, palpitation, nervous fancies, palpitation, heartburn, flatulency, impurities, fever, irritability, low spirits, diarrhœa, dysentery, noises in the head and ears, debility, cramps, spasms, sickness, pains between the shoulders, cramps, spasms, nausea and sickness, sinking, fits, colds, catarrhs, cough, asthma, bronchitis, consumption, debility, gout, rheumatism, haemorrhoids, also children's complaints, and cures fifty times its cost in medicine. It does not interfere with a liberal diet, but imparts a healthy relish to lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most feebled. We extract a few of many thousand cures:
Cure No. 1,771.—Lord Stuart de Decies of many year's dyspepsia.——Cure No. 49,832.—"Fifty year's indescribable agony from dyspepsia, nervousness, asthma, cough, constipation, flatulency, spasms, sickness and vomiting, have been removed by Du Barry's excellent food."—Maria Jay, of Lynn, Norfolk.——Cure No. 53,816.—Field Marshal the Duke of Pluskow, of dyspepsia, constipation, nervousness, and liver complaints, which had resisted baths and medical treatment.——Cure No. 47,121.—Miss Elizabeth Jacobs, of extreme nervousness, indigestion, gatherings, low spirits, and nervous fancies.——Cure No. 51,816.—From the Rev. James T. Campbell, Winderstone Rectory, near Fakenham, Norfolk: "In all cases of indigestion, and particularly when the liver is affected, I consider Du Barry's Revalenta Arabica food the best of all remedies."—James T. Campbell.
Sold in canisters, 1 lb, 2s 9d; 2 lbs, 4s 6d; 12 lbs, 22s; 24 lbs, 40s. Super-refined quality, 5 lbs 22s; 10 lbs, 38s. The 10 lb, 12 lb, and 24 lb canisters carriage free, on receipt of post-office order by Barry Du Barry and Co., 77 Regent street, London; Fortnum, Mason and Co., 182 Piccadilly, London; Ablis, 60 Gracechurch street and all grocers and chemists.

HOMŒOPATHIC COCOA.—
TAYLOR BROTHERS' HOMŒOPATHIC COCOA is unequalled as an article of Diet for Homœopathic Patients, Dyspeptics, and Persons of delicate constitution.
Sold by all Grocers, in Tin Foil Packets, at 1s 4d per lb

DEANE'S TWO-HOLE BLACK PENS
which are unequalled for their durability and easy action, are adopted by the gentlemen of the Stock Exchange, and the principal bankers, merchants, and public companies of the city of London, besides several of Her Majesty's judges, the most eminent counsel, and the reverend the clergy. Their cheapness and popularity has induced many unprincipled people to put forth imitations of the genuine articles, which are equally useless to the purchaser, and disgraceful to the vender. The public are therefore cautioned, and respectfully requested not to purchase any as DEANE'S GENUINE TWO-HOLE BLACK PENS, unless each pen is stamped
"G. and J. Deane, London Bridge,"
and the box, which contains exactly twelve dozen, has thereon a variously coloured label, inscribed
"G. and J. DEANE'S Two-Hole Black Pens, 46 King William street, London bridge."

DINNEFORD'S
PURE FLUID MAGNESIA
has been for many years sanctioned by the most eminent of the Medical Profession, as an excellent remedy for acidities, heartburn, headache, gout, and indigestion. As a mild aperient it is admirably adapted for delicate females, particularly during pregnancy; and it prevents the food of infants from turning sour during digestion. Combined with the Acidulated Lemon Syrup, it forms an effervescing aperient draught which is highly agreeable and efficacious.
Prepare by DINNEFORD and CO., Dispensing Chemists (and General Agents for the Improved Horse Hair Gloves and Belts), 172 New Bond street, London, and sold by all respectable Chemists throughout the empire.

HOLLOWAY'S OINTMENT AND PILLS.—In all sores, wounds, and sprains, Holloway's ointment is the most effectual application. It at once gives ease by allaying inflammation and moderating the flow of blood to the part. Whenever the malady has been of long duration, the ointment should be assisted by Holloway's purifying pills, which act upon the stomach and liver; guarding digestion from falling into that disordered state, which the pain, restlessness, and fever attending these ailments, is apt to produce, and which much retards recovery; and sometimes even makes serious the slightest case. No mother or nurse should want these noble remedies, equally applicable to all ages and constitutions. They purify the blood, regulate its circulation, renew diseased structures, and invigorate the system.

WONDERFUL, CURIOUS, AND INSTRUCTIVE.—The most extraordinary natural wonders and curiosities in the world, together with life-size wax models of men and women, which take entirely to pieces, and natural anatomical preparations; the whole nearly one thousand in number, clearly illustrating, to the meanest capacity, the amazing and complex anatomy of the human body, now exhibiting at the Royal Institute of Anatomy and Science (ten doors east of the Pantheon), 369 Oxford street, London. Principal: Wm. Beale Marston, who lectures daily. Other lectures are delivered, and the models explained, by a Professor always in attendance to give information upon any medical or physiological subject. A visit to this Institution will convey to the mind in an hour or two an accurate knowledge of the human body and the wonders of nature, more than years of reading. Open daily, for Gentlemen only, from 11 a.m. till 10 p.m. Admission, One Shilling.

TEETH REPLACED.—DECAYED TEETH RESTORED.—Mr A. ESKELL, Surgeon Dentist, supplies PATENTED INCORRODIBLE TEETH, without extracting Teeth or stumps, on his never-failing and painless principle of SELF-ADHESION, rendering detection impossible. Articulation and mastication guaranteed. Decayed Teeth rendered insensible to pain, and stopped with his OSTEOPLASTIC Enamel—of the same colour as the Teeth, permanently useful, and lasting unchanged for years (a most important discovery in Dental Science!) Loose teeth fastened, &c. Hours, Ten to Six. Consultation free. Charges strictly moderate.—314 Regent street (opposite the Polytechnic), and Bennett's hill, Birmingham.

Post free for Two Stamps.
EXTRAORDINARY DISCOVERY of an Entirely NEW THEORY of CURING DISEASE, being the recorded experience of 30 years' special practice in Great Britain, France, and America—with evidence of the actual effects of the latest Scientific Discoveries, denominated NEW LOCAL REMEDIES, with the adjuncts of Constitutional Treatment not yet generally known, even by the medical faculty of the British Empire, but which have been recently introduced into England. Sent free on receipt of two stamps to defray postage, &c, by W. HILL, Esq, M.A., No. 27 Alfred place, Bedford square, London, W.C.—Daily consultations from Eleven till Two, and Six to Eight Evening.

A Boon to Nervous Sufferers.

TO THE NERVOUS AND DEBILITATED.
Just published, the 125th thousand, with numerous plates, in a sealed envelope, price 1s, sold by all booksellers, or post paid, by the Author, for 12 stamps,
MANHOOD: THE CAUSE AND CURE of PREMATURE DECLINE, with Plain Directions for Perfect Restoration to Health and Vigour. By J. L. CURTIS, 15 Albemarle street, Piccadilly, London.
CONTENTS.
INTRODUCTORY CHAPTER on the Physiological Structure and Functions of the Reproductive Organs.
CHAPTER II.—Causes of Spermatorrhœa and Impotence; Early Vicious Indulgences; Dangers of Neglect.
CHAPTER III.—A Review of the Disqualifications of Marriage; whether resulting from the Youthful Abuse, the Follies of Maturity, the Effects of Climate, or Infection.
CHAPTER IV.—Plan of Treatment, Medical and Moral, with observations on a new and successful mode of detecting Spermatorrhœa and other Urethral discharges by microscopic examination.
CHAPTER V. and VI. on the modern Treatment of Gonorrhœa and Syphilis.
The Book concludes with numerous interesting cases, to which is added the Author's receipt of a preventive Lotion.
MR CURTIS, author of the above Medical Treatise, may be consulted as usual. The efficacy and harmless nature of the remedies employed by MR CURTIS having been demonstrated by a successful practice extending over a period of 20 years nervous sufferers have a perfect guarantee that the utmost skill and experience will be made available in the treatment of their cases.
Consultations from 10 till 11, 3, and 6 till 8. Sundays from 10 till 1.

HUBBUCK'S PATENT WHITE ZINC PAINT.

Many Painters and Decorators have never seen really good Zinc Paint. The adulterations so generally sold to them as Zinc Paint bear no comparison with the genuine article.

But still greater prejudice is excited by their having been supplied with the paint manufactured by the foreign process, which does not resist the atmosphere of towns lighted by gas. It first loses the gloss, and ultimately washes off.

Hubbuck's Patent Process is completely impervious to every Atmosphere, Bilge Water, and Gas under every form.

CAUTION.—The Officers of the H. E. I Company are requested to observe that HUBBUCK'S Zinc Paint supplied them for years, is totally different from what has lately been sent out for the Company's Service in India, that being obtained by public competition among the Paint Grinders at a less price than the raw metal could be bought for.

Each cask is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, PAINT and VARNISH WORKS, 24 LIME STREET, E.C.

The Forty-seven Shillings Suits made to order from Scotch, Heather, and Cheviot Tweeds and Angolas, all wool and thoroughly shrunk, by B. BENJAMIN, Merchant and Family Tailor, 74 Regent street, W. Patterns, designs, and directions for self-measurement sent free. N.B.—A perfect fit guaranteed.

SPRING AND SUMMER ATTIRE.—E. MOSES and SON beg to state, that their preparations for Spring and Summer exceed any of their former efforts as well in extent as in variety. They have ransacked the principal markets both at Home and Abroad for the best and newest manufactures, and have succeeded in collecting such an assortment of goods as has never before been exhibited under one roof in this or any other country.

Their Bespoke Tailoring Departments have been supplied with an endless variety of the choicest and most popular fabrics.

Their Ready Made Clothing Stock is complete in every respect, and they venture to say that for Elegance of Style, Durability of Material and Workmanship, Tastefulness of Finish and Cheapness, it is quite unequalled, even in the Metropolis of England.

No less care has been bestowed on the Hosiery, Hat and Cap, and Boot and Shoe Departments, which have been furnished with an entirely new stock of fashionable and seasonable goods at such prices as enable the proprietors to offer their patrons very great advantages.

N.B.—E. MOSES and SON take this opportunity of announcing, that they intend giving their customers the full benefit of the abolition of the duty on silks, gloves, &c.

E. MOSES and SON, Corner of Minories and Aldgate, and corner of New Oxford street and Hart street.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire.

E. MOSES and SON wish it to be particularly observed that if any article be not approved of it will be exchanged, or the money returned without hesitation.

Their Book, containing a sketch of the History of British Costume, with self-measurement and list of prices, gratis on application, or post free.

THE "INDISPENSABLE" SUIT, made in various colours and patterns, and particularly adapted for walking, riding, travelling, and business. This is universally acknowledged to be the most comfortable and serviceable suit ever introduced. Price from 35s.—To be obtained of E. MOSES and SON, corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

THE GREAT EASTERN.—An elegant Almanack, with a beautifully executed engraving of the Great Eastern, may be obtained gratis of E. MOSES and SON, Corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

NOTICE TO VOLUNTEERS.—E. MOSES and SON employ a Special Staff of cutters and workmen for the Uniforms of Volunteer Rifle Corps, and are therefore able to execute all orders with promptitude

N.B.—Estimates for both Uniforms and Accoutrements may be obtained at either of their Establishments, Corner of Minories and Aldgate, and Corner of New Oxford street and Hart street.

COUNTRY BRANCHES—Bradford & Sheffield, Yorkshire

JOSEPH THORLEY, the Inventor and Sole Proprietor.
Offices, 77 Newgate street, London.
A pamphlet sent free by post on application.

TRADE B/P MARK.
BROWN AND POLSON'S
PATENT CORN FLOUR.—The LANCET states, "This is superior to anything of the kind known."—It is respectfully announced that to any application by letter, Brown and Polson forward the address (for any village or town in the Three Kingdoms) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as Brown and Polson's," if the name, address, and designation are kindly communicated, such confidence will be greatly appreciated.—BROWN and POLSON, Manufacturers to Her Majesty the Queen, Paisley, and 23 Ironmonger lane, London.

FLEET STREET.
A NEW DISCOVERY IN TEETH.
MR HOWARD, SURGEON-DENTIST, 52 Fleet street, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication; and that Mr Howard's improvement may be within reach of the most economical, he has fixed his charges at the lowest scale possible. Decayed teeth rendered sound and useful in mastication. 52 Fleet street.—At home from 1 till 5.

KEATING'S COUGH LOZENGES.—Statistics shew that 50,000 persons annually fall victims to Pulmonary Disorders, including Consumption, Diseases of the Chest, and the Respiratory Organs. Prevention is at all times better than cure; be, therefore, prepared during the wet and wintry season with a supply of Keating's Cough Lozenges, which possess the virtue of averting, as well as of curing a cough or cold; they are good alike for the young or for the aged—they soothe bronchial irritation, and for improving the voice, the Preacher, Statesman, Singer, and Actor, have long patronised them.

IMPORTANT TESTIMONIAL.

Cure of Asthma of several years' standing.—"Calne cross, near Stroud, Gloucestershire.—Sir,—Having been troubled with Asthma for several years, I could find no relief from any medicine whatever, until I was induced about 2 years ago to try a box of your valuable lozenges, and found such relief from them, that I am determined for the future never to be without a box of them in the house, and will do all in my power to recommend them to my friends. If you consider the above testimonial of any advantage, you are quite at liberty to make what use of it you please.—I am, sir, your most obliged servant, W. J. TRIGG."—Thomas Keating, Esq.

Prepared and sold in boxes, 1s 1½d, and tins, 2s 9d, 4s 6d, and 10s 6d each, by Thomas Keating, Chemist, &c., 79 St Paul's churchyard, London. Retail by all Druggists and Patent Medicine Vendors in the world.

N.B.—To prevent spurious imitations, please to observe that the words "KEATING'S COUGH LOZENGES" are engraven on the Government Stamp of each Box, without which none are genuine.

ANOTHER CURE OF VIOLENT COUGH, SORE THROAT, &c., by DR LOCOCK'S PULMONIC WAFERS.—Dated Kirton.—"Sir,—Having had an ulcerated sore throat and violent cough for several months, accompanied with excessive expectoration, and obtained no relief from my medical attendant, and being recommended by my neighbour, Mrs Maddison (who had experienced great relief from Dr Locock's Wafers), to try them, and I was induced to do so, and feel a great pleasure in bearing my testimony to a speedy cure experienced by me from one box only. (Signed) CHARLOTTE HEAD. To Mr J. Noble, Bookseller, Market place, Boston."—Dr Locock's Wafers give instant relief, and a rapid cure of asthma, consumption, coughs, and all disorders of the breath and lungs. Price 1s 1½d, 2s 9d, and 11s per box. They have a pleasant taste. Sold by all medicine vendors.

HOLLOWAY'S PILLS AND OINTMENT are indispensable for the security of life and health. Fever, influenza, bronchitis, sore throat, diptheria, and bilious complaints, are ever-present plagues to mankind; but these can certainly and permanently be put to flight by the aid of these unrivalled aperient, detergent, and restorative remedies. There are multitudes of sallow and feeble invalids now languishing in all parts of the world under these diseases, who would soon have found their healthy appearance, strength, and cheerfulness return, if they judiciously used Holloway's preparations, from which no harm can possibly result. The ointment should be well rubbed night and morning over the affected parts, while the pills are taken with discretion. A great and happy change for the better will speedily appear

JENDERS, STOVES, FIRE-IRONS,

and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM BURTON'S SHOW ROOMS. They contain such an assortment of FENDERS, STOVES, RANGES, CHIMNEY-PIECES, FIRE-IRONS, and GENERAL IRONMONGERY, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright Stoves, with ormolu ornaments and two sets of bars, £3 15s to £33 10s; Bronzed Fenders, with standards, 7s to £5 12s; Steel Fenders, £2 15s to £11; ditto, with rich ormolu ornaments, from £2 15s to £18; Chimney-pieces, from £1 8s to £80; Fire-irons, from 2s 3d the set to £4 4s.

The BURTON and all other PATENT STOVES, with radiating hearth-plates.

CUTLERY, WARRANTED.—

The most varied Assortment of TABLE CUTLERY in the world, all Warranted, is on Sale at WILLIAM S. BURTON'S, at Prices that are remunerative only because of the largeness of the sales. 3½-inch Ivory-handled Table Knives, with high shoulders, 12s 6d per dozen; Desserts to match, 10s; if to balance, 6d per dozen extra; Carvers, 4s 3d per pair; larger sizes, from 5s to 27s 6d per dozen; extra fine Ivory, 33s; if with Silver Ferrules, 40s to 50s; White Bone Table Knives, 4s per dozen; Desserts, 3s; Carvers, 2s 3d per pair: Black Horn Table Knives, 7s 4d per dozen; Desserts, 5s; Carvers, 2s 6d; Black Wood-handled Table Knives and Forks, 6s per dozen: Table Steels, from 1s each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers.

THE PERFECT SUBSTITUTE FOR SILVER.—

The real Nickel Silver, introduced more than 25 years ago by WILLIAM S. BURTON, when plated by the patent process of Messrs Elkington and Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either beautifully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful Plate Chest, containing a set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.
	£ s d	£ s d	£ s d	£ s d

WILLIAM S. BURTON'S

GENERAL FURNISHING IRONMONGERY CATALOGUE may be had gratis, and free by post. It contains upwards of 400 Illustrations of his illimited Stock of Electro and Sheffield Plate, Nickel Silver, and Britannia Metal Goods, Dish Covers, and Hot-water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Urns and Kettles, Tea Trays, Clocks, Table Cutlery, Baths and Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bed-room Furniture, &c., with List of Prices, and Plans of the Sixteen large Show-rooms, at 39 Oxford Street, W.; 1, 1a, 2, and 3 Newman street; and 4, 5 and 6 Perry's place, London.—Established 1820.

FREDERICK DENT,

Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and the maker of the Great Clock for the Houses of Parliament, 61 Strand, and 34 Royal Exchange. No connection with 33 Cockspur street.

TOILETTE REQUISITE FOR THE SPRING.—

Among the many luxuries of the present age, none can be obtained possessing the manifold virtues of ODLRIDGE'S BALM of COLUMBIA. If applied to the roots and body of the hair, it imparts the most delightful coolness, with an agreeable fragrance of perfume. It also at this period of the season prevents the hair from falling off, or if already too thin or turning grey, will prevent its further progress, and soon restore it again. Those who really desire to have beautiful hair, either with wave or curl, should use it daily. It is also celebrated for strengthening the hair, freeing it from scurf, and producing new hair, whiskers, and moustaches. Established upwards of thirty years. No imitative wash can equal it. Price 3s 6d, 6s, and 11s only.—C. and A. Oldridge, 13 Wellington street north, Strand, W.C.

EAU-DE-VIE.—THIS PURE PALE

BRANDY, though only 16s per gallon, is demonstrated, upon analysis, to be peculiarly free from acidity, and very superior to recent importations of veritable Cognac. In French bottles, 34s per dozen; or securely packed in a case for the country, 35s.

HENRY BRETT and CO.,
Old Furnival's Distillery, Holborn.
To be obtained only at their Distillery.

HANDSOME BRASS AND IRON

BEDSTEADS.—HEAL and SON'S Show Rooms contain a large assortment of Brass Bedsteads, suitable both for Home use and for Tropical Climates; handsome Iron Bedsteads with Brass Mountings and elegantly Japanned; Plain Iron Bedsteads for Servants; every description of Wood Bedstead that is manufactured, in Mahogany, Birch, Walnut-tree Woods, Polished Deal and Japanned, all fitted with Bedding and Furniture complete, as well as every description of Bedroom Furniture.

HEAL AND SON'S ILLUSTRATED

CATALOGUE, containing Designs and Prices of 100 Bedsteads, as well as of 150 different articles of Bedroom Furniture, sent free by post.—HEAL and SON, Bedstead, Bedding, and Bedroom Furniture facturers 196 Tottenham court road, W.

GAS FURNACE FOR ASSAYERS.—

GRIFFIN'S PATENT BLAST GAS FURNACE affords heat sufficient for every description of Metallurgic Assay and for the the melting of Bullion. It readily fuses 10 pounds of copper or cast iron. The process is quick, cleanly, and economical. An illustrated description, price twopence, post free.—JOHN J. GRIFFIN, F.C.S., Patentee, 119 Bunhill row, E.C., of whom may be had Chemical Apparatus of every description for assaying, centigrade testing, and analysis.

DREADFUL ACCIDENTS FROM

FIRE.—The numerous painful deaths that have occurred during the present season from ladies' dresses taking fire, would have been prevented by the use of the Panklibanon Registered Safety Fire Guard, price from 10s each. They are nearly invisible, do not obstruct the heat, and require no fixing. No fire-place should be without one of these life-preservers. The public are invited to view them at the Panklibanon General Furnishing Ironmongery and Electro Silver Plate Warehouse, 56 and 58 Baker street. Illustrated books sent free.

N.B.—Colza Oil, of the finest quality, 4s per gallon.

OILS, SOAPS, AND CANDLES.—

The original Depôt for LILLE COLZA OIL of the purest importation, 4s 6d per gallon, in any quantity. Household Yellow Soaps, 36s, 40s, 44s, 46s and 48s per cwt. The most durable Soaps in the trade. Store Dip Candles, 7½d per lb. Wax-wick Moulds, 8½d per lb. Price's Composites, 8d, 9d, 10d, and 11d per lb. Lists free on application. Town deliveries daily per own carts.

WHITMORE and CRADDOCK
16 Bishopsgate street within, E.C., London.
Five pounds worth of goods railway free.

MAPPINS' TABLE CUTLERY.—

Season 1860.

	Ordinary Quality.	Medium Quality.	Best Quality.
Two dozen full-size Table Knives, ivory handles	£ s d 2 4 0	£ s d 3 6 0	£ s d 4 12 0
One-and-a-half dozen full-size Cheese do	1 4 0	1 14 0	2 11 0

One Steel for sharpening	0 3 0	0 4 0	0 6 0
Complete Service	4 14 6	6 18 6	9 16 6

Messrs Mappins' table knives still maintain their unrivalled superiority; all their blades being their own Sheffield manufacture, are of the very first quality, with secure ivory handles, which do not come loose in hot water; and the difference in price is occasioned solely by the superior quality and thickness of the ivory handles.—Mappin, Brothers, 67 and 68 King William street, City; manufactory, Queen's Cutlery Works, Sheffield. Table cutlery, razors, pocket cutlery, and scissors, of their own manufacture, in stock for exportation, at Sheffield prices.

MAPPINS' CUTLERY AND

ELECTRO-SILVER PLATE always in extensive stock at their London warehouse for exportation, at Sheffield prices.

MAPPIN BROTHERS are intimately acquainted with the proper class and quality of their Manufactures suitable for different markets; and they spare no expense or labour in the packing up of their Cutlery and Electro-Silver Plate, so that it shall open out well on the other side.

Their book of drawings and prices is invaluable to buyers abroad. No goods shipped unless prepaid, or payment secured through some English merchant.

CAUTION.—"59th Geo. III., c. 7, sec. 8," entitled, "An Act to regulate the Cutlery Trade in England," provides, "that any offender against this Act may be committed to prison by Two Justices of the Peace for Three Calendar Months."

We hereby give notice that we shall take proceedings against any person or persons, selling, or manufacturing any article of "Cutlery" stamped with intent to counterfeit or imitate our Corporate Mark "The Sun," granted to us by "The Cutler's Company," June 26th, 1835.

Signed,
MAPPIN BROTHERS,
Queen's Cutlery Works, Sheffield; and
67 and 68 King William street, London, E.C.

Table Cutlery, Razors, Pocket Cutlery, and Scissors of their own Manufacture, in stock for exportation, at Sheffield prices.

ROYAL ITALIAN OPERA,

COVENT GARDEN.

Mr Gye has the honour to announce to the Nobility, Gentry, Subscribers, and the Public, that the Opera Season of 1860 will commence on Tuesday, April 10, on which occasion will be performed, for the seventh time on the Italian Stage, Meyerbeer's New Grand Opera, DINORAH.

Prospectuses, with the terms of Subscription, full particulars of the engagements, Operas to be given, &c., &c., may be obtained at the box-office under the portico of the theatre. Also of Mr Mitchell, Messrs Ebers, Mr Hookham, Messrs Chappell, Mr Bubb, Bond street; Mr Sams, St James's street; Mr Hammond, and Messrs Cramer and Co., Regent street; and of Messrs Keith and Prowse, Cheapside.

NEW THEATRE ROYAL ADELPHI

Sole Proprietor and Manager, Mr W. Smith.
Powerful Attraction for the Holidays.
Adelphi Drama and Grand Extravaganza.

On Easter Monday, April 9th, and during the week, the Original Drama of THE DEAD HEART. Mr B. Webster, J. L. Toole, D. Fisher, P. Bedford, Billington, Stuart, C. J. Smith, Powell, Romer; Miss Woolgar, K. Kelly, and Laidlaw. And the Grand Musical Fairy Extravaganza of THE FAIR ONE WITH THE GOLDEN LOCKS. Messrs J. L. Toole, P. Bedford, Eburne, Powell, Romer; Miss Woolgar, Miss Emily Thorne (her first appearance), Miss K. Kelly, Miss Laidlaw. Doors open at ½ past 6, commence at 7.

Acting Manager, Mr W. Smith.

ASTLEY'S ROYAL AMPHITHEATRE.

Proprietor, Mr Wm. Batty.

In announcing the RE-OPENING on EASTER MONDAY, April 9th, of this far-famed Amphitheatre, again under his own management, Mr Batty feels proud in calling to mind the widely-extended and flattering patronage, including even that of Her Most Gracious Majesty the Queen; and which patronage, during his former period of catering for the public amusement, was at all times so lavishly bestowed. During the recess, the interior of the Amphitheatre has been entirely redecorated and embellished, and surrounded with costly and unique lustres, and a new gigantic and most beautiful centre crystal chandelier, manufactured by D Price and Son, of Houndsditch. The whole energy of the proprietor has been directed to gathering together, in one body, celebrities both dramatic and equestrian, who have each achieved success. He has not hesitated to expend immense labour and capital in its accomplishment, and looks, with hope, for the fullest patronage of the public.

*** In active preparation, a New Grand Military Spectacle, founded upon the French drama, "L'Histoire d'un Drapeau," (now performing, with great success, in Paris), and entitled THE HISTORY OF A FLAG.

ROYAL SURREY GARDENS.—

Rossini's sublime work the STABAT MATER and a MISCELLANEOUS CONCERT will be given on Thursday next, April 5th. To commence at eight o'clock. The band and chorus will number 150 performers. The most eminent artistes are engaged. Admission 1s; reserved stalls, 2s 6d.

NOTICE.

THE GENUINE AND ORIGINAL

BOND'S PERMANENT MARKING INK bears the Address on the Label,
28 Long lane, West Smithfield, City.

SOYER'S SULTANA SAUCE,

Relish, Succulate, Aromatic Mustard, &c.—These excellent preparations, of which the LANCET, in its sanitary analysation of Articles of Food, reported so favourably of their purity and wholesomeness, are to be obtained of all grocers and Italian warehousemen in the United Kingdom. They are indispensable with Fish, Meat, Game, Poultry, Hashes, Stews, and all made dishes, impart also to Chops, Steaks, and Cutlets a most delicious flavour. Wholesale, CROSSE and BLACKWELL, Purveyors to the Queen, 21 Soho square, London.

HARVEY'S FISH SAUCE.—

Notice of Injunction.—The admirers of this celebrated Fish Sauce are particularly requested to observe that none is genuine but that which bears the back label with the name of WILLIAM LAZENBY, as well as the front label signed "Elizabeth Lazenby," and that for futher security, on the neck of every bottle of the Genuine Sauce will henceforward appear an additional label, printed in green and red, as follows: "This notice will be affixed to Lazenby's Harvey's Sauce, prepared at the original warehouse, in addition to the well-known labels, which are protected against imitation by a perpetual injunction in Chancery of 9th July, 1858."

6 Edwards street, Portman square, London.

ADOPTED LARGELY BY HER MAJESTY'S GOVERNMENT.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient and particularly applicable for warm climates.

1st. It is a non-conductor.

2nd. It is portable, being packed in rolls, and not liable to damage in carriage.

3rd. It effects a saving of half the timber usually required.

4th. It can easily be applied by any unpractised person.

5th. From its lightness, weighing only about 42 lbs to the square of 100 feet, the cost of carriage is small.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths; also for lining iron houses, to equalise the temperature.

Price ONE PENNY PER SQUARE FOOT.

CROGGON and CO'S PATENT FELTED SHEATHING for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, and saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO, 2 Dowgate hill, London and at 2 Goree Piazzas, Liverpool.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

DIRECTORS' REPORT.

(For presentment at the adjourned Sixth Ordinary General Meeting, 29th March, 1860.)

Referring to their last Annual Report, the Directors have to inform the shareholders that the agency at Singapore is now in active operation; and that a branch of the Bank has since been established at Hongkong.

The Directors trust that the general balance sheet and accounts now submitted will be satisfactory to the shareholders. It will be seen that the net profits on the Bank's operations, for the year ended 31st December last, amount to £37,211 7s 5d; and that after deduction of the interim dividend at the rate of five per cent., declared on 22nd September last, there now remains an available balance at the credit of profit and loss of £29,517 12s 2d. Out of this sum the Directors recommend a dividend (free of income tax), for the half-year ended 31st December last, at the rate of seven per cent. per annum, on the capital paid up at the 30th of June last, and on the subsequent calls from their respective dates of payment. Of the remainder, they propose transferring £5,000 to the credit of a "Reserve Fund," carrying forward the balance of £4,490 13s 8d as "undivided profits."

When the first dividend of five per cent. per annum was declared a year ago, the shareholders cordially adopted the Directors' proposal to apply the surplus profits at that period to the extinction of the whole of the preliminary expenses of the Institution and its Branches. The Directors doubt not that the shareholders will equally approve their present proposal to appropriate £5,000 towards the commencement of a Reserve Fund, to be hereafter increased from time to time.

The shareholders will observe by the balance sheet, that the subscribed capital of the Bank, £644,000, is now paid up in full; and the requisite certificate to that effect has been obtained from the Lords Commissioners of Her Majesty's Treasury.

The Directors who now retire are Mr Thomas A. Mitchell, M.P., Sir Henry Muggeridge, and Wm. S. Lindsay, M.P.; and one of them being immediately re-eligible, Mr Mitchell offers himself to the choice of the shareholders.

For the vacancies created by the retirement of the other two Directors, the following gentlemen present themselves as candidates, viz:—Mr Thomas Lancaster, and Mr Joseph R. Morrison.

The Auditors, Mr Thomas Dakin and Mr Jonathan Thorp, now complete their term of office, and offer themselves for re-election as Auditors for the ensuing year.

London, 14th March, 1860.

Minutes of the adjourned Sixth General Meeting of the shareholders, held at the London Tavern, on Thursday, the 29th day of March, 1860.

Thomas A. Mitchell, Esq., M.P., in the chair.

The advertisement convening the meeting and the Directors' Report, with the general Balance Sheet and Profit and Loss Account closed to the 31st December last, having been read, the following resolutions were moved by the Chairman, seconded by W. Nicol, Esq., M.P., Deputy-Chairman, and carried unanimously, viz.:—

1. "That the report now presented, together with the Balance Sheet and Profit and Loss Account, be approved and adopted."

2. "That a dividend (free of income tax) for the half-year ended 31st December last, at the rate of seven per cent. per annum, on the capital paid up at the 30th June last, and on the subsequent calls from their respective dates of payment, be now declared payable on and after the 2nd proximo."

The following resolution was moved by P. Bell, Esq., seconded by W. Macnaughten, Esq., and carried unanimously:—

3. "That Thomas A. Mitchell, Esq., M.P., who now retires, be re-elected a Director."

The Chairman moved, and the Deputy-Chairman seconded, a resolution:—

4. "That Thomas Lancaster, Esq., and Joseph R. Morrison, Esq., be elected Directors in the room of Sir Henry Muggeridge and William Schaw Lindsay, Esq., M.P., who now retire."

The resolution was carried unanimously.

Frederick Pattison, Esq., moved a resolution:—

5. "That Thomas Dakin, Esq., and Jonathan Thorp, Esq., be re-elected Auditors for the ensuing year; and that their remuneration for the past year be £150.

The resolution was seconded by H. Vigurs East, Esq., and carried unanimously.

Sir Robert W. Carden moved, and Charles Binny Skinner, Esq., seconded, a resolution, which was carried unanimously:—

6. "That the best thanks of this meeting be given to the Chairman and Directors, for the very efficient manner in which they have conducted the business of the Bank."

The proceedings of the meeting hereupon closed.

T. A. MITCHELL, Chairman.

Warrants for the Dividend above declared, payable at The City Bank, Threadneedle street, London, on and after the 2nd proximo, will be issued forthwith to all the shareholders.

March 29th, 1860.

IMPERIAL AND ROYAL DANUBE STEAM NAVIGATION COMPANY.

The Steamers of this Company have recommenced running for the season—

From VIENNA to PESTH, every day, 6.30 a.m.

From VIENNA to SEMLIN, Sunday, Tuesday, Friday, 6.30 a.m.

From VIENNA to ORSOVA, GIURGEVO, GALATZ, CONSTANTINOPLE, every Tuesday, 6.30 a.m.

From PESTH to VIENNA, every day, 6 p.m.

From SEMLIN to PESTH and VIENNA, Sunday, Tuesday, Thursday, 5 a.m.

From ORSOVA to SEMLIN, PESTH, VIENNA, Saturday, 6 a.m

From GALATZ to GIURGEVO, ORSOVA, SEMLIN, PESTH and VIENNA, Saturday morning.

EXPRESS BOAT LINE from PESTH to GALATZ, in direct communication with ODESSA and CONSTANTINOPLE. The vessels leave Pesth every MONDAY, at 8 a.m., touch at MOHAIS, SEMLIN, BASIASCH, ORSOVA, and the principal stations of the Lower Danube, and arrive at Galatz on the following Saturday. Departure from GALATZ to PESTH and VIENNA, Saturday, 4 a.m.

ON THE SAVE.

From SEMLIN to SISSEK, Thursday morning.
From SISSEK to SEMLIN, Monday morning.

For further information apply to
Messrs PIETRONI and DRAPER,
81 London Wall, E. C.

STEAM SHIPS.—

The General Steam Navigation Company's powerful and first-class STEAM SHIPS leave from St Katharine's Wharf for—

HAMBURG—Every Wednesday and Saturday. Chief cabin, 2l; fore, 1l 5s.

HARBURG—Every Sunday.

ROTTERDAM—Every Tuesday, Thursday, and Sunday, at 11 morning. Chief cabin, 1l 10s; fore, 17s 6d. Cologne, 34s 6d or 19s 9d.

ANTWERP, BRUSSELS, and the RHINE—The Rhine and Dolphin every Tuesday and Thursday, at 12 noon. Chief cabin, 1l 7s; fore, 20s. Brussels, 22s 3d. Cologne, 35s 6d. Leaving Antwerp for London every Sunday and Friday at noon.

OSTEND, BRUSSELS, and the RHINE—Every Wednesday and Saturday morning. April 4 at 11; 7 at 12 noon. Leaving Ostend for London every Tuesday and Friday night. Chief cabin, 18s; fore, 14s. Brussels, 20s 3d. Cologne, 34s.

HAVRE—From St Katharine's Wharf, every Thursday. April 5 at 10 a.m. Chief cabin, 14s; fore, 10s. London to Paris, 1l.

PARIS, via CALAIS, direct—From London Bridge Wharf, every Wednesday and Saturday morning. April 4 at 11; 7 at 12 noon. Chief cabin, 14s; fore, 10s. London to Paris, 17s 8d.

BOULOGNE—From London Bridge Wharf, every Tuesday, Thursday, Friday, and Sunday morning. April 1 at 9; 5 at 11; 5 at 12 noon. Chief cabin, 14s; fore, 10s. London to Paris, 16s.

EDINBURGH—From St Katharine's Wharf, adjoining the Tower, every Wednesday and Saturday; at 10 morning. Fares: chief cabin, 25s; fore, 15s, deck, 10s; which fares include all pier dues at London and Granton.

HULL—From London Bridge Wharf, every Wednesday and Saturday, at Eight morning. Chief cabin, 6s 6d; return, 10s; fore cabin, 4s; return, 6s.

NEWCASTLE—From Newcastle Steam Wharf, 272 Wapping, every Wednesday and Sunday, at 10 morning. Chief cabin, 8s; return ticket, 12s: fore, 5s; return, 7s 6d

YARMOUTH—From London Bridge Wharf, every Wednesday; and Saturday, at Four afternoon. Saloon, 8s: return, 12s: fore cabin, 5s; return, 7s 6d.

Offices 71 Lombard street, 37 Regent circus, and Leadenhall street; and St Katharine Wharf.

OVERLAND ROUTE.—

COMMUNICATION by STEAM to INDIA, AUSTRALIA, &c., via Egypt.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels for Gibraltar, Malta, Corfu, Egypt, Aden, Ceylon, Madras, Calcutta, the Straits, and China, by their steamers leaving Southampton on the 4th and 20th of every month. For Gibraltar, Malta, Egypt, Aden, and Bombay, by those of the 12th and 27th of each month; and for Gibraltar, Malta, Egypt, Aden, Bombay, Mauritius, Reunion, Ceylon, King George's Sound, Kangaroo Island (for Adelaide), Melbourne, and Sydney, by the steamers leaving Southampton on the 12th of every month.—For further particulars apply at the Company's offices, 122 Leadenhall street, London, E. C., or Oriental place, Southampton.

NEW LINE OF STEAM

PACKETS from LIVERPOOL to the BRAZILS.—The fine new first-class and powerful Steamer ERNST MERCK, Captain Andersen, 900 tons register, is appointed to sail on the 24th April from Liverpool, for Bahia and Rio de Janeiro, calling at St Vincent and Pernambuco to land passengers, parcels, &c.

This magnificent steamer is the pioneer of a new line from Liverpool to the Brazils, and, to insure success, moderate rates of freight and passage money will be charged.

This line of steamers being under contract, are all engaged, under heavy penalty, to make their passages within a certain number of days, including stoppages, thus insuring to passengers and shippers a speedy and sure conveyance.

Apply, in London, to Messrs Windsor Brothers, 115 Leadenhall street; in Glasgow, Messrs J. and R. Young and Co., 107 Buchanan street; in Manchester, Mr J. J. Radford, South parade, St Mary's; in Hamburg, Messrs Cellier and Parran; in Antwerp, Messrs Grisar and Marsily; in Havre, Messrs Soubry and Grosos; and in Liverpool to Nuttall, Mors, and Co., 18 Chapel street, Agents for this line.

NOTICE.—The Steamers for Halifax and Boston call at Cork Harbour, on both outward and homeward passages, to land and receive Mails; the Steamers to and from New York will also call at Cork Harbour, commencing with the Persia, to leave Liverpool on the 31st inst., and New York on the 25th April.

BRITISH AND NORTH AMERICAN ROYAL MAIL STEAM SHIPS,

appointed by the Admiralty to sail between LIVERPOOL and NEW YORK direct, and between LIVERPOOL and BOSTON, the Boston ships only calling at HALIFAX to land and receive passengers and her Majesty's mails. The following, or other vessels are appointed to sail from Liverpool:—

AMERICA, for BOSTON, Saturday, April 7.
*AFRICA for NEW YORK direct, Saturday, April 14.

*Taking Passengers and Goods for Nassau and Havana, to be transferred at New York on board R.M.S.S. Karnak.

EUROPA, for BOSTON, Saturday, April 21.

Passage money, including steward's fee and provisions, but without wines or liquors, which can be obtained on board:—To Halifax and Boston, chief cabin, Twenty-two Pounds; second cabin, Sixteen Pounds. To New York, chief cabin, Twenty-six Pounds; second cabin, Eighteen Pounds. Freight to Halifax, Boston, and New York, £3 per ton and 5 per cent. primage. Small parcels, 5s each and upwards. These steam ships have accommodation for a limited number of second cabin passengers.

For passage or other information, apply to J. B. Foord, 52 Old Broad street, London; D. Currie, Havre, and 12 Place de la Bourse, Paris; G. and J. Burns, Buchanan street, Glasgow; D. and C. M'Iver, Queenstown; or D. and C. M'Iver, Water street, Liverpool.

TO MERCHANTS AND OTHERS.—

Very Important.—The following letter has been received by the Secretary of the Additional Curates Society:—

London, Feb. 27, 1860.

Rev. Sir,—I should be glad to know how far the following plan would meet the wishes of your Committee.

I am thinking of making a special contribution (intended to be annual for at least some years, provided nothing unforeseen occurs), towards providing additional clergy for those parts of the metropolis where they are most needed, and which are the least able to provide them for themselves.

My wish, however, is that, wherever practicable, the parish or district shall provide a portion of the clergyman's stipend to meet a grant from the fund which it is my desire to help to form. It would also be my wish that, in order to get the parish or district gradually to find the whole of the stipend, grants should only be made for a limited number of years—say 3, 5, or 7—and with the understanding that they should annually be decreased. Should I resolve on contributing £200 or £300 a year, is it your opinion that others would be induced to join in the work? On those who make their money in a particular town or city it appears to me that there is an especial call to provide for the spiritual wants of the humbler inhabitants of that town or city, and I trust that there are many in London who will acknowledge the claim.—Yours obediently, A MERCHANT.

To Rev. W. R. Cosens, 7 Whitehall, S.W.

It is earnestly hoped that others who are interested in the humbler inhabitants of the metropolis may feel the claim upon them to provide for their spiritual wants, and assist in forming a London Diocesan Fund. All communications and contributions may be addressed to Rev. W. R. Cosens, the Secretary of the Society for Promoting the Employment of Additional Curates in Populous Places, at 7 Whitehall, S.W.

THE BILL-BROKERS AND THE BANK OF ENGLAND.

IS A COMPROMISE POSSIBLE?

THE dispute between the bill-brokers and the Bank of England, in consequence of the habitual exclusion of the former from the Discount Office of the latter, still continues. There has been of late much oral discussion on the subject in Lombard street, and some pamphlets have been written about it. If the interest of the parties themselves were only in question, we should not interfere in the controversy,—we should leave it to be settled as other matters of business are settled; but as the interest of the public is concerned also, we wish to say a few words on it.

The interest of the public is concerned in this way. The bill-brokers of Lombard street hold a large part of the banking reserve of the country. Both London bankers and country bankers deposit with them, at call or on short notice, the sums of money which they are either unable or unwilling to employ in their own business. These are the sums which the bankers first resort to in time of pressure, and which they rely upon to meet unforeseen and sudden demands. The bill-brokers are in some sense "the bankers' "bankers"; they keep the unemployed balance of bankers, just as bankers keep the unemployed balance of the community at large.

The safety, therefore, of the great bill-broking houses in Lombard street is a matter of grave concern. We are all interested in the safety of our bankers, and most of our bankers are interested in the safety of the bill-brokers. It is almost of national importance that the trade of the bill-brokers should be conducted as soundly as possible by themselves, and be interfered with as little as possible by others.

It is impossible to deny that this trade was formerly conducted on principles which are by no means sound. The bill-brokers held very large sums of money payable on demand, and they kept no reserve to meet them. There was a sort of agreement—not a definite compact, but a loose understanding—that the Bank of England would always advance to the bill-brokers *any* amount they might require, so long as they had good bills to offer as security for it.

After the panic of 1857, the Bank of England declined to continue this practice. They now say to the bill-brokers, —'You are bankers as much as we are, and you must keep 'your own reserve just as we do; we cannot engage to help 'you in a time of panic; we cannot say that we will keep 'large sums in readiness for you whenever you require 'them: you are our competitors in quiet times; you must 'not come to us in troubled times.' The reasonableness of this course can scarcely be gainsaid. The bill-brokers under the old system were not regular customers of the Bank of England; they kept no money at the Bank; they had no regular and continuous discount account there; they were perpetually competing with the Bank; they were reducing its profits at the very time that they were relying on it for their safety.

On the other hand, however, the inconvenience to the public that may under certain circumstances arise, from the absolute exclusion of the brokers from the Discount Office, is undeniably great. It is little felt in times of quiet, but it may be much felt in times of anxiety. We feel that we are speaking on a most delicate subject. We do not wish to allude in any manner to the credit of individual houses, or to any circumstances that, even in a remote degree, relate to it. But still it is certain that, in the next panic, the credit of the bill-broking firms cannot be as good as it was in the last. *Then* it was understood that the Bank would advance to them what was required for their stability; and in matter of fact the Bank did so advance; the firm of Messrs Saunderson only failed because they had no more proper securities to offer to the Bank;—*now* it is understood that the Bank will not so advance, let the results be what they may. It is inevitable that so great a change must tell greatly on the credit of the bill-brokers, and must tell unfavourably. It is said that the bill-brokers may protect themselves by refusing to discount; but in practice this is not so easy. It is not pleasant to tell a regular customer that you cannot lend him what you have always lent him, and what he has had reason to expect you will lend him. A few rough refusals to discount would soon injure a bill-broking or a banking business; the sounder part of the trading community like to be *sure* of having certain stated advances at certain stated times; and they will be disinclined to deal with parties who may be compelled peremptorily to refuse such advances when they are most required. Moreover, abruptly refusing to discount at the commencement of a panic is a sure way to aggravate that panic. It causes more conversation, uneasiness, and terror, than any other step which could be taken. The bill-broking firms may, at the early stages of the next panic, decline at once to discount, but we fear it would not improve their position; we believe it would impair their credit exceedingly. Considering, therefore, that the credit of the large discount houses is a matter of national concern—that any injury to it may at a time of anxiety cause the ruin of thousands who never ought to be ruined,—we cannot but regret that the rule of the Bank should have effects so unfavourable to it.

Is, then, a compromise impossible? We have seen that the rule of the Bank is founded on sound principles, but may not the bill-brokers by a real change in their system bring themselves within those principles?

The rationale of the Bank regulation is this: a bank, it 'is 'justly said, ought only to engage to advance, as a rule, defined 'sums to regular customers: as the bill-brokers are not regula

r

'customers of the Bank, they have no claim upon it: there is 'no reason for their having an exceptional privilege.' But why should not the bill-brokers become regular customers of the Bank? The bill-brokers. it is evident, must now keep some reserve: unless they do so, now that they have no access to the Discount Office of the Bank, their position is not safe for a day. In fact, it is stated that the highest class of them *do* keep a reserve. But why should they not keep it at the Bank of England? If the bill-brokers habitually kept a large balance to their credit at the Bank of England, they would be good customers of the Bank, and would have a right to be treated as other good customers are. They would have a right to make terms. 'We shall want, or we *may* want,' they would be able to say at certain times, 'certain sums 'of money:—will you advance us those sums?' It would be quite within the rules of good banking that the Bank should say,—"Yes, we will lend you them. We will do for you as 'we do for other people what you make it worth our while to 'do. As you give us the use of a large cash balance on all 'ordinary occasions, we will lend you sums not *exceeding* a 'stated amount on extreme occasions.'

The distinctness of the limit of such advances is an essential element in the legitimacy of the compromise. A banker never ought to engage to make unlimited advances to any one, on any security, for any motive. He has no right to undertake to do what he may not have the money to enable him to do. But if only a limit be fixed to the requirements of the brokers, we think they may safely be placed on the footing of other customers; they may have such advances as their account will justify. We should much regret to hear that they had more, and equally regret to hear that they had less.

"THE SITUATION" CALMLY REVIEWED.

In our last week's impression we expressed a belief that the annexation of Savoy, the mode in which it had been effected, and the assurances and denials by which its consummation had been preceded, might—if the warning were duly interpreted and laid to heart—prove an indirect source of safety and tranquillity for Europe. But we should be sorry to lull our countrymen into fallacious or unwarranted security. Forewarned is forearmed; and without becoming alarmists we think it most desirable that all men—merchants as well as politicians—should carefully consider all the features presented by the present aspect of the Continent and all the rocks-a-head which a dispassionate observation can discover and lay bare. It is foolish to pretend a comfort or tranquillity which we are far from feeling; to shut our eyes to obvious dangers, or to "cry 'Peace, Peace,' when there is "no peace"—nor, as far as we can discern, much prospect of peace for some time to come. We do not fear immediate rupture, nor any definite scheme of hostility; but we cannot disguise from ourselves that the position of affairs abroad is becoming singularly complicated, embarrassing, and uneasy, and calls for a more than ordinary amount of sagacity, vigilance, and resolution on the part both of the British Government and the British people. A simple and obvious peril may be met and averted—and it would not become a great nation to manifest extreme anxiety in the face of such; but the *perplexities* arising from a variety of opposite and crossing contingencies, all imminent and all grave, constitute a very different difficulty to deal with;—and it is precisely this *perplexity* which is to our minds the peculiar feature of "the Situation."

Savoy and Nice are annexed to France—Tuscany, Lombardy, and the Emilian Provinces to Piedmont. But these arrangements, which might seem to be the termination of the "Italian question" which has kept us in hot water for 18 months, are, in truth, only the commencement and the signal for fresh imbroglios. They are less the settlement of a conflict than the opening of a crisis. The *natural* complications and inevitable dangers are vast enough in themselves; but they are enormously aggravated by the fact that they are used by an inscrutable and unquiet will, seated at the Tuilleries and brooding over the confusion—a will whose plans we cannot penetrate, whose designs may not, perhaps, even be clearly formed as yet, but of which we know only that it is morbidly and incurably restless, and that its hopes and purposes do not and cannot harmonise with our own.

Cast a glance at Naples to begin with. The Monarch, weak and bad, at the head of a considerable army and an ignorant and somewhat brutal population, is oppressing and maltreating all that is wealthy, noble, or respectable in his dominions, in a fashion which indicates almost a settled determination to drive them into frenzy and revolt. England and France remonstrate and advise, and get laughed at for their pains, because the King knows perfectly well that their views with regard to his dominions are wholly discrepant; that they will not combine to coerce him into decency; and that without the aid of one or the other, his own subjects are powerless to drive him out. The Neapolitan Bourbons are incurably bad: both France and England have now arrived at this conclusion: a republic would be welcome by no foreign State, and would have little real root at home: France would fain establish Murat there, but this England will not listen to: England probably would fain see Naples joined to Piedmont as one great Italian Kingdom, but this France will certainly oppose. It would appear, therefore, as if the continuance of the actual state of things were impossible, and either of the only yet proposed changes were equally so. A third solution—which is at least possible—has not yet received the consideration to which it is entitled. Why should not Murat be reinstated at *Naples*, which never was so well governed as under his grandfather; and why should not *Sicily*—which was never under Murat—be united to Sardinia, as it once was and wishes to be again? Meanwhile, however, the Neapolitan territories may any day be in flames, which will almost necessitate European intervention to extinguish them.
